If a reimbursement indicator (e.g. ODMS, CDS) is not defined, the drug and its detailed indication have not gone through the formal reimbursement process as legislated for in the Health (Pricing and Supply of Medical Goods) Act 2013.

TREATMENT:
The starting dose of the drugs detailed below may be adjusted downward by the prescribing clinician, using their independent medical judgement, to consider each patient's individual clinical circumstances.

Treatment administered once every 21 days for 1 year or until disease recurrence, whichever occurs first or unacceptable toxicity develops.

Facilities to treat anaphylaxis MUST be present when trastuzumab is administered.

<tbody>
<tr>
<td>Trastuzumab</td>
<td>600mg</td>
<td>SC over 2-5mins</td>
</tr>
</tbody>
</table>

The injection site should be alternated between the left and right thigh.

New injections should be given at least 2.5 cm from the old site and never into areas where the skin is red, bruised, tender, or hard.

During the treatment course with trastuzumab subcutaneous formulation other medicinal products for subcutaneous administration should preferably be injected at different sites.

Patients should be observed for at least six hours after the first injection and for two hours after subsequent injections for signs or symptoms of administration-related reactions. Any deviation should be noted in local policies.

ELIGIBILITY:
- Indications as above
- HER-2 positive tumour as demonstrated by a validated test method.
- Life expectancy > 3months

NCCP Regimen: Trastuzumab subcutaneous  21 days- EBC
Published:  15/09/2015
Review:    20/09/2019
Version number: 2

Tumour Group: Breast
NCCP Regimen Code: 00285
ISMO Contributor: Prof Maccon Keane

This information is valid only on the day of printing, for any updates please check www.hse.ie/NCCPchemoregimens
- ECOG 0-3
- In EBC, LVEF > 55%* for trastuzumab therapy.
  * Many clinical trials have been conducted with LVEF ≥ 50% (1). Clinical judgment should be exercised where patients fall between these two ranges.

EXCLUSIONS:
- Clinically significant cardiac disease (history of symptomatic ventricular arrhythmias, congestive heart failure or myocardial infarction within previous 12 months). Hypersensitivity to trastuzumab or any of the excipients.
- Patients experiencing dyspnoea at rest due to complications of advanced malignancy and comorbidities may be at increased risk of a fatal infusion reaction.

PRESCRIPTIVE AUTHORITY:
The treatment plan must be initiated by a Consultant Medical Oncologist.

TESTS:
Baseline tests:
- Blood renal and liver profile
- Cardiac function (LVEF using ECHO or MUGA scan)

Regular tests:
- Blood renal and liver profile every 6 weeks
- Cardiac function every 12 weeks. Where there are signs of cardiac impairment four to eight weekly checks may be more appropriate.

Disease monitoring:
Disease monitoring should be in line with the patient’s treatment plan and any other test/s as directed by the supervising Consultant.

DOSE MODIFICATIONS:
- Any dose modification should be discussed with a Consultant.
- None usually recommended. Discontinue if unacceptable toxicity occurs.
- If the patient misses a dose of sub-cutaneous trastuzumab it is recommended to administer the next 600 mg dose (i.e. the missed dose) as soon as possible. The interval between consecutive trastuzumab subcutaneous formulation administrations should not be less than three weeks.
Renal and Hepatic Impairment:

Table 1. Recommended dose modification for trastuzumab in patients with renal or hepatic impairment

</tbody>
</table>

SUPPORTIVE CARE:

EMETOGENIC POTENTIAL: Minimal (Refer to local policy).

PREMEDICATIONS:

Not usually required unless the patient has had a previous hypersensitivity. Paracetamol and antihistamine cover should be considered.

OTHER SUPPORTIVE CARE : No specific recommendations.
ADVERSE EFFECTS / REGIMEN SPECIFIC COMPLICATIONS

The adverse effects listed are not exhaustive. Please refer to the relevant Summary of Product Characteristics for full details.

- **Cardiac toxicity:**
  - Trastuzumab has been associated with moderate to severe cardiac failure. Baseline and 3 monthly cardiac function tests are required during treatment especially for those with prior anthracycline exposure.
  - If LVEF drops 10 ejection fraction (EF) points from baseline AND to below 50 %, treatment should be withheld and a repeat LVEF assessment carried out within approximately 3 weeks. If LVEF has not improved, or declined further, discontinuation of trastuzumab should be strongly considered, unless the benefits for the individual patient are deemed to outweigh the risks. All such patients should be referred for assessment by a cardiologist and followed up.
  - Trastuzumab and anthracyclines should not be given concurrently in combination due to cardiotoxicity risk.
  - The half-life of trastuzumab is approximately 4-5 weeks

- **Trastuzumab infusion-associated symptoms,** usually chills and fever may occur. Stop infusion and consider antihistamine cover. When symptoms have resolved the infusion may be recommenced. For serious reactions, discontinue the trastuzumab infusion and provide supportive therapy such as oxygen, beta-agonists and corticosteroids.

- **Pulmonary events:** Severe pulmonary adverse reactions occur in association with the use of trastuzumab and have been associated with a fatal outcome. These events may occur as part of an infusion-related reaction or with a delayed onset. Caution should be exercised for pneumonitis, especially in patients being treated concomitantly with taxanes.

DRUG INTERACTIONS:

- A possible interaction with warfarin has been reported. An increased INR and bleeding may occur in patients previously stabilized on warfarin. The interaction was noted in two patients after 8-10 doses of trastuzumab. An INR prior to starting the trastuzumab is recommended, then every 2 weeks for the first 3 months and then monthly if stable. Inform patient to watch for any bleeding. Modification of the warfarin dose may be needed (1).
- Current drug interaction databases should be consulted for more information.

ATC CODE:

Trastuzumab - L01XC03
