Individual	01/12/2021	Please provide me with a full, accurate and complete list of records held by the Health Service Executive (HSE) or under the authority of the HSE which describe the isolation of the SARS-COV-2 virus (Coronavirus COVID-19), taken directly from a symptomatic patient with COVID-19, where the sample was not combined or mixed with any other source of genetic material (such as, for example, monkey kidney cells or cancer cells), thereby eliminating contamination as a possible alternative source of sampling. Please note that the word “isolation” is used here in the normally understood meaning of that word, namely, the act of separating one thing from another. I am not referring to (and hence not requesting) documents where “isolation” means the preparation of a culture of something else, the performance of an amplification test (e.g. a PCR test which detects only mRNA or DNA), or to the sequencing of anything other than the viral isolate in question. If any records of the HSE match the above description, please provide enough information so that I may identify and access each record with certainty. Please provide also the title, author, date, journal, weblink etc. of any document, online or otherwise, recorded on a document held by the HSE or under its authority, which describes the isolation procedure in question.
