PQ 18667-21 To ask the Minister for Health the number of persons aged 16 to 69 years of age at very high risk of severe Covid-19 identified as part of group four of the Covid-19 vaccine roll-out to date; and the number of first and second vaccines given to this cohort by medical condition in tabular form. -

Dear Deputy Pringle,

Thank you for your representation. As of Monday 3rd May, 1,621,870 vaccine doses have been administered; this information is updated daily and available at the following link: <https://covid-19.geohive.ie/pages/vaccinations>

As displayed at the above link, the below figures, as of Monday 3rd May are specific to those within the Government's provisional allocation cohort 4; People aged 16-69 years and at very high risk of severe COVID-19 disease.

Total doses offered to those in cohort 4	210, 270
Cohort 4 - 1st Dose	204, 271
Cohort 4 – 2nd Dose	5,799

It is important to emphasise that vaccination is only one part of our response to the prevention of COVID-19 infection. People who are vaccinated need to continue with all the public health measures that have been proven to reduce the risk of infection, i.e., limiting our social contacts, physical distancing, wearing a mask, hand hygiene, cough etiquette and avoiding non-essential travel until a sufficiently large proportion of the population are immune.

I hope this provides you with assistance,

Yours faithfully

Sharon Hayden
General Manager
Office of the CCO
