Dublin 2
Email:

Date: 22nd March 2021

PQ 11093-21 - To ask the Minister for Health the prevalence of cases of long Covid by health area; the services and clinics that are available to persons experiencing long Covid; and if he will make a statement on the matter.

Dear Deputy Pringle,

As COVID 19 is still a relatively new disease information on it, its features and its course are just emerging. We do however know that the clinical course of viral illnesses varies between people, and that the virus that causes Covid-19 can be detected in some people for many weeks. However this does not mean that people are infectious for a prolonged period of time.

Specific guidance on what has been referred to as the “Long - COVID” is presently under development both here and internationally. People who have had Covid-19 are being followed up by their doctors as appropriate, this is usually their GP and in the case of those who required hospitalisation and/or ITU admission, this is hospital-based. Longer term observational studies will be required to understand the health consequences presently being attributed to post COVID-19 infection.

Work has been undertaken internationally and in the UK. Guidance is being developed to align patient needs with care provision; and to develop criteria and strategies for the ongoing evaluation of patients.

I hope this provides you with assistance

Yours sincerely

Sharon Hayden
General Manager
