Protocol 37 was introduced by NAS effectively manage requests from hospitals for emergency interhospital transfers. Protocol 37 is defined as an emergency inter-hospital transfer where a patient has an immediate threat to life or limb that cannot be managed in the referring hospital. Those transfers driven by bed availability in the receiving hospital are specifically excluded from Protocol 37.

Protocol 37 transfers are allocated the nearest available emergency ambulance, and that ambulance responds on blue lights and sirens to the referring hospital – i.e. exactly the same response to a member of the public that dials 112/999. All Protocol 37 requests are made by a registrar, consultant or clinical nurse manager, and all Protocol 37 requests to come through the 112/999 system.

The timeframe by which the ambulance is required is provided by the hospital at the time of booking and this indicates how soon the ambulance is to respond.

The data shared below indicates the time the call was raised and the dispatch code was entered on the call. It is only at this point that the response required is known to the NAS. The data also shows the patient hand over to the responding crew for the transfer and the time the crew handed over the patient to the receiving hospital is the handover time.

I trust this information is of assistance to and should you require additional information please do not hesitate to contact me.

Yours sincerely,

William Merriman
