Deputy Seán Canney,  
Dáil Eireann,  
Leinster House,  
Dublin 2.

4<sup>th</sup> April 2022

PQ Ref: 9345/22 - To ask the Minister for Health the way he plans to deal with the severe lack of podiatrists available to care for persons with diabetes (details supplied); and if he will make a statement on the matter. - Seán Canney

Dear Deputy Canney,

I refer to your parliamentary question which was passed to the HSE for response.

In line with Sláintecare, the Enhanced Community Care Programme (ECC) objective is to deliver increased levels of health care with service delivery reoriented towards general practice, primary care and community-based services. The focus is on implementing an end-to-end care pathway that will care for people at home and over time prevent referrals and admissions to acute hospitals where it is safe and appropriate to do so, and enable a "home first" approach.

The ECC Programme was allocated €240m for the establishment of 96 CHNs, 30 Community Specialist Teams for Older people, 30 Community Specialist Teams for Chronic Disease, national coverage for community intervention teams and the development of a volunteer-type model in collaboration with Alone.

The rollout of the ECC Programme is closely aligned with the implementation of the "GP Agreement 2019", through which targeted funding of €210m has been provided to general practice to support phased development and modernisation over the period 2019 to 2022.

The ECC Programme funding described is providing a significant uplift to Community Podiatrists with 93 Integrated Care Podiatrists (and an additional 6 Podiatrists allocated to Acute Services – 3 WTE Clinical Specialists and 3 WTE Senior Podiatristc) to be recruited across the 9 CHOs. The breakdown of the additional Podiatrists being recruited is 30 WTE Clinical Specialist Podiatrists, 34 WTE Senior Podiatrists, and 29 Staff Grade Podiatrists. The Community Podiatrists will make up part of the 30 Community Specialist Teams for Chronic Disease. The recruitment for Diabetes Podiatrists commenced in mid-2021 across the country and is ongoing, currently with 25% of the overall Podiatrists onboarded.

In regard to the additional details supplied with your parliamentary question in relation to limb amputations and hospitalisations for foot ulcer treatment, a key objective of the National Clinical Programme (NCP) is reducing the number of persons having limbs amputated and being hospitalised with foot ulcers as a result of diabetes. Limb loss is one of the most devastating complications of diabetes and represents an enormous burden on the individual, their families and on the health and social care system in general. In addition, diabetic foot disease accounts for a significant proportion of health service expenditure. Reducing the number of diabetes related foot ulcers and amputations remains one of the major aims for the NCP for Diabetes.

The first Model of Care to be published by the NCP for Diabetes was the Model of Care for the Diabetic Foot 2011, which has been updated and launched in December 2021. In line with international best evidence, it calls for an equitable standardised foot screening process, risk status to be defined and a clinical care and

management plan to be recommended for each category. It calls for initial foot screening to occur in general practice, the at-risk foot to be treated in the community setting by the foot protection team and the active foot to receive care in the hospital setting by the multidisciplinary diabetic foot team.

In 2020, the Health Service Executive also published The National Framework for the Integrated Prevention and Management of Chronic Disease (2020-2025) which adopted a whole system approach to integrated care. This coincided with a reformed GP contract (GP Agreement 2019 referenced earlier) which will provide reimbursement for opportunistic case finding prevention and care for people with diabetes. This specifically incorporates a detailed foot assessment.

Implementation of the Diabetic Foot Model of Care will empower people with diabetes, and reduce foot ulcers, reduce amputations and reduce length and number of hospital admissions. Recruitment of Integrated Care Podiatrists to Community Specialist Teams for Chronic Disease across Ireland underway is necessary to successful implementation.

The Integrated Care Programme for Chronic Disease and the NCP for Diabetes are working with multiple stakeholders (e.g. H.R., HSCP Office, Professional societies, HEI's) as part of the ECC Programme to drive recruitment and retention of Podiatrists into these integrated care positions.

I hope the above is of assistance to you.

Yours sincerely,

A handwritten signature in blue ink, appearing to read "G. Crowley".
