PQ 12689/22: To ask the Minister for Health the annual cost of restoring dental screening services for children in schools; and if he will make a statement on the matter

Dear Deputy Cullinane,

The Health Service Executive (HSE) has been requested to reply directly to you in the context of the above Parliamentary Question, which you submitted to the Minister for response.

The HSE Dental Service provides dental treatment services to eligible children in targeted groups, people with special care needs and others in the care of the HSE. The emergence of Covid-19 in March 2020 has had a significant impact on the provision of all health services including dental services.

HSE Dental Services are provided through 17 Dental Areas, all of which continue to provide routine services. The dental service continues to prioritise treatment for people with special care needs, those who are medically compromised and provides emergency care for all eligible patients.

These services are delivered with a strong preventive ethos in order to minimise the incidence of dental disease in children and in vulnerable populations. In particular this preventive approach involves the delivery of personalised oral health promotion for children and people with special care needs.

Since the emergence of Covid-19, there has been a significant increase in delays accessing routine treatment for those in target school classes. This has resulted in backlogs emerging in the targeted schools programme. The numbers of those waiting for routine services relate to children waiting for their first routine dental appointment as part of a targeted approach. Throughout the course of the Covid-19 pandemic, the HSE responded to a number of emerging challenges, including Covid-19 testing, contact tracing and vaccination, along with implementation of updated infection prevention and control guidance.

Each of these has involved the HSE Dental Service, with extensive redeployment for testing and contact tracing, as well as for the mass vaccination programme. In some areas, access to clinical facilities was reduced due to repurposing for pandemic-related activities. The Cyber Attack on the HSE system in Summer 2021 also had a significant negative impact on Dental Services.

While most Oral Health staff have now returned to core duties enabling the safe resumption of services, strict adherence to physical distancing and enhanced infection prevention and control measures has reduced the capacity of the service and it is necessary to optimise the resources available.

Each of the 17 Dental Areas has adopted a prioritised approach to the sequence in which targeted school classes will be called for oral examinations, in line with guidance issued by the National Oral Health Office in August 2020.

The costs associated with restoring dental screening and treatment services for children in targeted classes are set out below.

WTE Cost (82 dental teams (dentist and dental nurse))	€9,951,913
30% Operational associated costs including employer's PRSI and all non-pay costs relating to clinical care or services	€2,985,573.90
Total Cost	€12.937m

I trust this information is of assistance to you, but if you require further clarification please do not hesitate to contact me.

Yours Sincerely,

Joseph Green
AND, National Oral Health Lead - Operations
