DOPS form descriptors

	PRE PROCEDURE
Indication	Assesses the appropriateness of the procedure and considers possible alternatives
Risk assessment	 Assesses co-morbidity including drug history Assesses any procedure related risks relevant to patient Takes appropriate action to minimise any risks
Confirms Consent	 Early in training the consent process should be witnessed by the trainer, once competent it is acceptable for the trainee to confirm that valid consent has been gained by another trained person. During the summative DOPS the process of obtaining consent should witnessed and assessed Complete and full explanation of the procedure including proportionate risks and consequences without any significant omissions and individualised to the patient Avoids the use of jargon Does not raise any concerns unduly Gives an opportunity for patient to ask questions by adopting appropriate verbal and non-verbal behaviours Develops rapport with the patient Respects the patient's own views, concerns and perceptions
Preparation	 Ensures appropriate pre-procedure checks and PPE use are performed as per local policies Ensures that all assisting staff are fully appraised of the current case Ensures that all medications and accessories likely to be required for this case are available
Equipment Check	 Ensures the available scope is appropriate for the current patient. Ensures the endoscope is functioning normally before attempting insertion checking all channels and connections, light source and angulation locks are off.
Monitoring	 Ensures appropriate monitoring of oxygen saturation and vital signs pre- procedure Ensures appropriate action taken if readings are sub-optimal Demonstrates awareness of clinical monitoring throughout procedure
Sedation	 When indicated inserts and secures IV access and uses appropriate topical anaesthesia Uses sedation and/or analgesic doses in keeping with current guidelines and in the context of the physiology of the patient Drug doses checked and confirmed with the assisting staff
	INSERTION AND WITHDRAWAL
Scope handling	 Exhibits good external control of gastroscope at all times. Efficient and effective manipulation, using rotation of the head of the scope with the left hand to generate torque and the right hand to insert and withdraw. Minimizes external looping in shaft of instrument.
Angulation controls	Demonstrates ability to use angulation controls appropriately, using the left hand only during the vast majority of the procedure.
Suction/air/lens cleaning	Well-judged and timely use of distension, suction and lens clearing.
Tip control	 Use of torque and angulation wheels independently and in combination, as necessary to elicit excellent controlled tip movement. Avoids unnecessary mucosal contact, maintaining luminal view when possible.
Intubation and Oesophagus	 Insertion through the mouth and pharynx under endoscopic vision. Careful and safe intubation of the oesophagus under endoscopic vision. Passage down the oesophagus under endoscopic vision.

DOPS form descriptors

Stomach	 Smooth passage through the stomach and pylorus, maintaining luminal views. Rapid recognition of all major landmarks.
2nd part of duodenum	Insertion into second part of duodenum.Optimisation of scope position in second part of duodenum.
Pro-active Problem Solving	 Demonstrates and can articulate a logical approach to resolving technical challenges (bend negotiation, pathology encountered, large hiatus hernia) to ensure complete gastroscopy achieved. Is able to adapt approach depending on anatomy and technical challenge faced ensuring best option is used. Early recognition of lack of success of a technique with adaptation or change in strategy to next appropriate potential solution.
Pace and Progress	Completes whole procedure in reasonable and appropriate time, without rushing and without unduly prolonging the procedure
Patient comfort	 Conscious awareness of patient discomfort and potential causes at all times Applies logical strategy to minimise any potential or induced discomfort, including anticipation of problems and reducing patient anxiety Appropriate escalation of analgesic use if technical strategies unsuccessful in managing patient discomfort
	VISUALISATION
Oesophagus	Full and careful visualisation of the whole length of the oesophagus
Gastro-oesophageal junction	 Correct identification of the both the gastro- oesophageal junction and the squamo-columnar junction. Full views of gastro-oesophageal junction from both proximally and distally.
Fundus	Full visualisation of all areas of the gastric fundus with retrograde viewing
Lesser curve	Full visualisation of whole length of lesser curve using antegrade and retrograde viewing
Greater curve	Full visualisation of whole length of greater curve using antegrade and retrograde viewing
Incisura	Full visualisation of proximal and distal margins of the incisura
Antrum and pylorus	Full visualisation of the antrum, pylorus and pyloric channel
1st part duodenum	Full and careful visualisation of all walls of the 1st part of the duodenum
2nd part duodenum	Careful visualisation of distal duodenum
	MANAGEMENT OF FINDINGS
Recognition	 Rapid, accurate and thorough determination of normal and abnormal findings. Appropriate use of mucosal enhancement techniques.
Management	 Takes appropriate specimens as indicated by the pathology and clinical context. Full and appropriate attempt to visualise important associated lesions. Performs endoscopic therapy or interventions appropriately for the pathology and clinical context (includes taking no action)
Complications	 Ensures the risk of complications is minimised Rapid recognition of complications both during and after the procedure. Manages any complications appropriately and safely.

DOPS form descriptors

	POST PROCEDURE
Report writing	Records a full and accurate description of procedure and findings Uses appropriate endoscopy scoring systems
Management plan	Records an appropriate management plan (including medication, further investigation and responsibility for follow-up).
	ENTS (ENDOSCOPIC NON-TECHNICAL SKILLS)
Communication and teamwork	 Maintains clear communication with assisting staff Gives and receives knowledge and information in a clear and timely fashion Ensures that both the team and the endoscopist are working together, using the same core information and understand the 'big picture' of the case Ensures that the patient is at the centre of the procedure, emphasising safety and comfort Clear communication of results and management plan with patient and/or carers
Situation awareness	 Ensure procedure is carried out with full respect for privacy and dignity Maintains continuous evaluation of the patient's condition Ensures lack of distractions and maintains concentration, particularly during difficult situations Intra-procedural changes to scope set-up monitored and rechecked
Leadership	 Provides emotional and cognitive support to team members by tailoring leadership and teaching style appropriately Supports safety and quality by adhering to current protocols and codes of clinical practice Adopts a calm and controlled demeanour when under pressure, utilising all resources to maintain control of the situation and taking responsibility for patient outcome
Judgement and / decision making	 Considers options and possible courses of action to solve an issue or problem, including assessment of risk and benefit Communicates decisions and actions to team members prior to implementation Reviews outcomes of procedure or options for dealing with problems Reflects on issues and institutes changes to improve practice
