Integrated Model of Care for the Prevention and Management of Chronic Disease - Implementation Guide

Introduction

The Integrated Care Programme for the Prevention and Management of Chronic Disease (ICPCD) focuses on improving the standard of care for four major chronic diseases that affect over one million people in Ireland: cardiovascular disease, type 2 diabetes, chronic obstructive pulmonary disease (COPD) and asthma. The ICPCD is leading out on the development and implementation of a model of care for the Integrated Prevention and Management of Chronic Disease in Ireland.

We know that the risk factors for chronic disease and the levels of chronic disease across Ireland’s population are increasing. Our health service as it is currently structured with an overly hospital-centric focus, struggles to meet the needs of our population. Sláintecare, Ireland’s ten-year plan for delivering a health and social care service that meets population need, has provided the impetus for developing and implementing a chronic disease framework that is person-centred, holistic, proactive and preventive in its approach and delivered in the community.

Our recent experience of learning to live with COVID-19 lends further weight to the need for reform of our health services: it is now essential that congregated settings, such as the hospital setting, for older people or people with chronic disease are avoided as much as possible and that these individuals be cared for within the community setting. Implementation of the ‘end-to-end’ model for the integrated prevention and management of chronic disease will support health and social care professionals to provide holistic patient-centred care as close to home as possible.

‘Integrated Care’ for chronic disease is defined as healthcare provided at the lowest appropriate level of complexity, with responsive, connected services built around patient need, to support and empower individuals to optimise their health, actively address and minimise their risk factors for chronic disease and to live well with chronic disease.

The ‘National Framework for the Integrated Prevention and Management of Chronic Disease’ and accompanying ‘National Framework for the Integrated Prevention and Management of Chronic Disease: a ten-step guide to support local implementation’, outlines an ‘end-to-end’ model for the prevention and management of chronic disease. It describes a new, integrated way of working for Health and Social Care Professionals (HSCP) that is designed to improve the healthcare experience and health outcomes for individuals living with chronic disease in Ireland.

Core ingredients of Integrated Care for Chronic Disease

The ‘National Framework for the Integrated Prevention and Management of Chronic Disease’ outlines the steps that are being taken at a national level to support the integration of care for the prevention and management of chronic disease. It describes a continuum of health promotion, disease prevention, diagnosis, treatment, disease-management and rehabilitation services that are coordinated across different healthcare providers and healthcare settings and describes a new way of working together across the health continuum. It should be read in conjunction with its companion document ‘National Framework for the Integrated Prevention and Management of Chronic Disease: a ten-step guide to support local implementation’ which provides a local guide for the development of integrated care at the local level.

Integrated care requires us to adopt new ways of working across boundaries at community, Community Health Network, Ambulatory Care Hub, hospital and Regional Health Area levels, with HSCPs working to the top of their licence. A shift from an over-reliance on acute sector services to the provision of person-centred care provided as close to home as possible is required. This ‘ten-step guide’ is based on evidence of “what works” in the delivery of integrated care. This evidence is drawn from international literature but also from our experience of implementing integrated care here in Ireland.

Resources Included in this pack

This pack has been developed to support each local site on their own journey towards achieving end-to-end care for individuals with chronic disease in their area. The pack contains the following:

- A brief overview of the integrated model of care for the prevention and management of chronic disease and the services required to support implementation of the model of care in each local area. Further detail on the model of care and local implementation can be found in the ‘National Framework for the Integrated Prevention and Management of Chronic Disease’ and the ‘National Framework for the Integrated Prevention and Management of Chronic Disease: a ten-step guide to support local implementation’ which are also included in this pack; <https://www.hse.ie/eng/about/who/cspd/icp/chronic-disease>
- Guidance on the establishment of a specialist ambulatory care hub;
- The ICPCD suite of metrics;
- Guidance on the establishment of local governance structures;
- A suite of job descriptions that covers each member of the Chronic Disease Specialist Team who will work across the specialist ambulatory care hub and the acute hospital setting; and,
- A suite of National Clinical Programme resources (**appendix 1**)

The roll-out of this Integrated Model of Care for the Integrated Prevention and Management of Chronic Disease builds on the hard work, experience and learning of existing integrated care team members working throughout Ireland. Despite the challenging landscape of the COVID-19 healthcare setting at this time, we will work together to integrate the various strands of Ireland’s health service and this scale-up of integrated care services provides an exciting opportunity to achieve real changes in how we deliver healthcare with the ultimate goal of providing a person-centred service by ensuring that individuals receive “the right care, at the right time, by the right team and in the right place”.

Dr Orlaith O’Reilly
NCAGL Chronic Disease

Shift Left of Resources & Activity

The Integrated Model of Care for the Prevention and Management of Chronic Disease

The ‘*Integrated Model of Care for the Prevention and Management of Chronic Disease*’ is at the heart of the ‘*National Framework for the Integrated Prevention and Management of Chronic Disease*’ and demonstrates how “end-to-end” care can be provided within the Irish health services.

The Model of Care (Figure2) describes the five levels of service, and examples of each service, that need to be provided for a population in order to deliver integrated end-to-end care for chronic disease. These are the five levels of service that local areas need to strengthen and provide in an equitable manner to their population.

Figure 2. Model of care for the Integrated Prevention and Management of Chronic Disease

This model of care supports people to live well within the community, with ready and equitable access to General Practitioner (GP) review, diagnostics, HSCP input and specialist opinion, as required. The focus is on keeping people well and on providing care as close to home as possible.

- Level 0:** Living well with chronic disease. The Integrated Care Programme for the Prevention and Management of Chronic Disease is working to develop services to support and empower individuals living in the community to prevent and/or manage their chronic disease and associated complications. Such services include education sessions, goal-setting and the development of action plans to support chronic disease management at home.
- Level 1:** General Practice care is provided at Community Health Network (CHN) level. The new Chronic Disease Management Programme in General Practice will provide additional supports to GPs in caring for individuals living with chronic disease in the community.
- Level 2:** Community specialist ambulatory care will provide a further layer of support to the GP to care for patients in the community through ready access to diagnostics, pulmonary and cardiac rehabilitation and diabetes structured patient education services which will be based in the ambulatory care hub in the community.
- Level 3:** Acute specialist ambulatory care will offer acute specialist services such as outpatient services and respiratory outreach which will be delivered from the ambulatory care hub.
- Level 4:** Specialist hospital care may be required for the management of complex issues requiring hospital resources. However, an emphasis on early supported discharge home, with the appropriate supports in place in the community, will be a priority for the health services.

Core elements of integrated care for people with chronic disease include primary and secondary prevention, early detection and intervention, efficient access to community diagnostics, patient-centred assessment and on-going comprehensive medical treatment, all to be provided in the most appropriate setting. Figure 3 shows the full spectrum of services required to provide end-to-end care in Ireland and the settings where they should occur. Each local area must ensure that the full spectrum of services is available to their population in order to support full implementation of the model of care.

Figure 3 Spectrum of services provided to people living with, or at risk of, chronic disease

Specialist Ambulatory Care Hub - Chronic Disease

Figure 1 Older persons/chronic disease service model

The specialist ambulatory care hub offers access to specialist services in the community for individuals living with more complex chronic disease and/or multi-morbidity who may require specialist input. It will provide a centre in the community where a multidisciplinary chronic disease specialist team will work together in order to provide an integrated, holistic assessment and service and will act as a single point of access to a wider host of services within the community for individuals with more complex needs. The specialist ambulatory care hub for chronic disease will also provide access to diagnostics such as spirometry, echo and X-ray to GPs and the Chronic Disease Specialist Team working within the community. GPs who refer their patients in to the specialist ambulatory care hub for chronic disease will work closely with the specialist team in managing care for their patients. The Integrated Care Consultants will be based in the specialist ambulatory care hub for half of their working week, with the other half to be spent working in the hospital affiliated with their hub. This will support continuity of care across the community and acute settings.

Self-management support services e.g. cardiac rehab, pulmonary rehab, diabetes prevention, weight management, and diabetes self-management education will be provided in the hubs.

It is important to note that the specialist ambulatory care hubs for chronic disease are entirely separate from the COVID assessment hubs. These two types of hubs will be situated in different locations and will work towards different objectives.

Community Chronic Disease Specialist Teams (per hub)

Diabetes:

- CNS Diabetes 3.0 WTE
- Clinical Specialist Podiatrist 1.0 WTE
- Senior Grade Podiatrist 1.0 WTE
- Basic Grade Podiatrist 1.0 WTE
- Senior Dietitian 3.0 WTE
- Staff Grade Dietitian (Weight Management/DPP) 3.0 WTE

Cardiology

- CNS Cardiovascular Disease 3.0 WTE
- Senior Physiotherapist (Cardiology) 1.0 WTE
- Cardiac Rehabilitation Coordinator 1.0 WTE
- Staff Nurse Cardiac Rehabilitation 1.0 WTE
- Admin Assistant (IV) Cardiac Rehabilitation team 0.5 WTE
- Clinical Psychologist 0.2 WTE

Respiratory

- CNS Respiratory 3.0 WTE
- Senior Physiotherapist 3.0 WTE
- CS Physio Rehab coordinator 1.0 WTE
- CNS Rehab 1.0 WTE
- Staff Grade Physio rehab 1.0 WTE
- Pulmonary Rehab admin 0.5 WTE

GP Lead with Specialist Interest

- GP Lead with Specialist Interest 0.2 WTE (aligned to hub with 16 specialist consultants)

Admin/management

- Service Improvement Lead 1.0 WTE
- Project Officer 1.0 WTE
- Administration Staff 2.0 WTE

Critical gaps resourced in Acute Ambulatory Care Specialist Teams:

There will be 18 Ambulatory Care Hubs associated with these 11 prioritised hospitals

1. Cork University Hospital
2. University Hospital Limerick
3. University Hospital Galway
4. Mater Misericordiae University Hospital
5. Beaumont Hospital
6. Connolly Hospital
7. Tallaght University Hospital
8. St. James’s Hospital
9. St. Vincent’s University Hospital
10. St. Luke’s Hospital, Kilkenny
11. University Hospital Waterford

Critical gaps in acute services for the hospitals concerned have been identified by the National Clinical Programmes. Initial resources have been secured to fill these critical gaps. Hospital acute specialist teams will support the delivery of specialist ambulatory care, and COPD outreach teams will provide hospital avoidance and early supported discharge programmes in their locality.

Key critical acute staffing gaps have been identified in these areas. 68.2 WTE will be recruited to support the Specialist Ambulatory Care hub. These staff consists of:

- Consultant 16.0 WTE
- Acute Team ANP Diabetes 11.0 WTE
- Senior Dietitian 10.0 WTE
- Staff Grade Dietician 3.0 WTE
- Acute Respiratory Team CNS 7.0 WTE
- Acute Respiratory Team Physio 4.0 WTE
- COPD Outreach CNS 5.0 WTE
- COPD Outreach CS Physio 4.0 WTE
- Acute CNS Cardiovascular Disease 8.2 WTE

While some additional resources for acute ambulatory care teams are being made available immediately, existing hospital consultant teams will be required to support these services, additional acute resources will be made available as the hubs develop.

Governance

1. Clinical governance

Community Specialist Teams

The function of the Community Specialist Team is to support GP’s to care for people with chronic disease in the community. They provide services i.e. specialist nursing, physiotherapy, dietetics, podiatry and structured patient education, to patients on referral from their GP. The clinical governance of the patient remains under the GP.

Pulmonary and Cardiac Rehabilitation

Pulmonary and cardiac rehabilitation services are provided in the hub. These services are under the clinical governance of the local consultant respiratory physician or cardiologist. Each hospital associated with the hub will nominate a relevant consultant to oversee these services and integrate the hospital and community delivery of their rehabilitation service.

Acute Specialist Teams

Hospital specialist teams for cardiology, endocrinology, respiratory medicine and pulmonary outreach have been resourced to fill critical gaps, to allow them to support ambulatory care in association with the community specialist teams in the hubs. Patients referred by their GP to acute specialist services will be under the clinical governance of the relevant consultant for the acute services.

Clinical Leadership

Each hospital has been resourced with at least one Integrated Care Consultant. This is a new position created for cardiology, respiratory medicine and endocrinology and will be based 50% in the community and 50% in the hospital. The Integrated Care Consultant will be part of the hospital acute specialty specific team and will engage with other consultant colleagues in the hospital to provide ambulatory services to and within the hub as locally agreed. Initially each hospital will have at least one Integrated Care Consultant. Integrated Care Consultants will sit on the Local Governance Group for Chronic Disease, to ensure collaboration and integration between hospital and community services. Additional Integrated Care Consultants for each chronic disease specialty (cardiology, respiratory medicine, and endocrinology) will be sought for each hospital as the hubs develop, and identified critical acute gaps resourced.

The Integrated Care Consultants will have a specific role to support clinical service design, implementation and clinical governance of their hub, whilst also ensuring service design in key pathways is aligned with deliverables. Each hospital associated with a hub will nominate a consultant in each chronic disease specialties to work with the integrated care consultant (s) in their hospital to ensure this role is delivered.

2. Professional Governance

Professional Governance for each disciplinary group will be through their existing community or acute clinical line managers.

3. Operational Governance

The Operational Governance of the ambulatory care hub is under the Chief Officer of the CHO, via the head of Primary Care. The Head of Primary Care is the Chair of the Local Chronic Disease Governance Group. The Service Improvement Lead for Chronic Disease reports to the Head of Primary Care in each CHO.

The local Service Improvement Lead will, with the local Project Officer to support the delivery of key enablers including workforce recruitment, data to drive service improvement, operational function and reporting back to relevant heads of care in their area. The Service Improvement Lead will also be tasked with overseeing the operational function of the Local Governance Group (LGG) for Chronic Disease. The Service Improvement Lead will ensure an interdisciplinary approach, whilst also monitoring case load and will have a reporting function to the Primary Care Service Manager in the Community.

Key functions of Specialist Ambulatory Care Hub

- Support GP’s in the local networks to manage chronic disease patients in the community
- Liaison with Primary Care-Community Health Network to support continuity of care in the community and to reduce duplication of work
- Deliver chronic disease-specific pathways of care
- Provide linkages with the chronic disease services in the affiliated hospital to support continuity of care
- Co-location of Integrated Care Consultants and HSCPs to support multidisciplinary approach to care
- Provide community access to diagnostics
- Provide access to self-management support services including cardiac rehabilitation, pulmonary rehabilitation, foot protection services, diabetes structured patient education, diabetes prevention and weight management programmes

Functions of the Chronic Disease Specialist Ambulatory Care Team

The specialist ambulatory care hub for chronic disease will provide additional services for individuals with more complex chronic disease needs within the community. The key functions of the team are as follows:

- Single point of access for Consultant +/- HSCP assessment for patients referred by GPs
- Deliver appropriate interventions for patients with complicated chronic disease
- Specialist care planning including case management function
- Co-ordination with GPs, primary care and community supports
- Deliver alternative outpatient pathways
- Promote and support population health initiatives within Primary Care

Key Linkages

In order to deliver integrated patient-centred care with a focus on hospital avoidance, the Integrated Care Consultants and HSCPs may need to change the way they work. Close linkages across CHO, local authority, community, primary care, the specialist ambulatory care hub and secondary care will need to be strengthened to deliver ‘end-to-end’ care. These linkages will need to be supported through the delivery of key enablers such as establishment of local integrated governance structures, progression of ICT infrastructure and funding.

Measures & outcomes for Community Specialist Teams for Chronic Disease

The evidence base indicates that a well-designed model of care for the prevention and management of chronic disease that sits within an integrated health service, is associated with positive outcomes including improved patient satisfaction, improved accessibility of health and social services and reduction in waiting times, levels of utilisation of hospital services and costs secondary to a reduction in hospital admissions.

Phase One will see the specialist ambulatory care hubs for chronic disease primarily impacting the 11 acute hospitals with the following measures and outcomes proposed when teams are fully implemented and with the model of care embedded and operating at optimal level:

Process indicators:

- 60% of hubs have begun to develop appropriate governance structures by the end of Q2 of first year of implementation and 100% hubs have appropriate governance structures in place by end of 2021.
- 60% of hubs have commenced development process of a multidisciplinary team by end of Q2 of first year of implementation with 100% hubs engaging in regular multidisciplinary team meetings by end of 2021.
- 60% of hubs have commenced development of Local Integrated Care Working Groups for the chronic diseases by end of Q2 of first year of implementation and 100% hubs have Local Integrated Care Working Groups for the chronic diseases and regular team meetings by end of Q2 of 2021.

Acute sector indicators – for patients with the four major chronic diseases in the relevant groups and areas:

- A 20% reduction in non-elective admissions for COPD, asthma, heart failure and diabetes by end of 2022 due to increased availability and accessibility of resources within the community.
- A reduction of 20% in bed days used for patients with COPD, asthma, diabetes and heart failure who are in the Chronic Disease Programme by end of 2022.
- 10% of eligible patients with multimorbidity will have a chronic disease care plan in place at end of 2021, rising to 20% by end of 2022.

Access indicators:

- A 40% reduction in urgent outpatient waiting times by end of 2022 due to increased access to diagnostics, specialist opinion and specialist support for the GP within the community.
- 30% of referrals for individuals with complex chronic disease/multimorbidity to the Chronic Disease Ambulatory Care Hub will receive input from the Specialist Team/be reviewed in the Ambulatory Clinic within 2 weeks by end of 2021, increasing to 50% by end of 2022.
- At least 40% of referred patients offered a standard cardiac rehabilitation programme by end of 2022.
- At least 40% of referred patients offered standard pulmonary rehabilitation programme by end of 2022.
- At least 60% of newly diagnosed type 2 diabetics are referred to an evidence-based, standardised diabetes structured patient education programme within three months of diagnosis by end of 2022.

Improved staff perception of quality of care they provide

- Bespoke Staff Survey across CDM Community Hubs to be undertaken.

Patient satisfaction

- National Patient Experience Survey to be expanded to include community services if appropriate or alternatively bespoke Patient Experience Survey to be undertaken in CDM Community Hub areas.

COPD Outreach-specific measures

- Number of patients discharged under COPD Outreach as % of ALL discharged for COPD
- Mean Average Length of Stay (ALOS) for COPD Outreach Discharges
- Difference in mean ALOS for COPD Outreach Discharge compared with COPD Discharge-ALL ALOS
- Number of patients referred to COPD Outreach as % of COPD Discharge
- Number of patients accepted on to Outreach Programme
- Average number of visits per patient accepted into COPD Outreach Service
- % re-admission to same acute hospitals of patients with COPD within 30 and 90 days
- Number of admissions avoided

Guidance on local governance structures to support implementation of the integrated service model

Practical experience of the implementation of integrated care to date has taught us that a local governance structure which involves CHO, hospital, primary care and community senior decision-makers, as well as clinicians, is an essential factor in enabling implementation and embedding integrated care in the health service. Sláintecare and the Integrated Care Programme for Older People (ICPOP) advocate for the creation of an enabling environment to address implementation (Figure 4).

Figure 4 Change approach

In many areas there are disease-specific LGGs already in existence and it is anticipated that local areas will build on existing governance arrangements, where possible. The key function of the local governance group will be to implement integrated pathways of care for individuals with chronic disease, as per the model of care for the Integrated Prevention and Management of Chronic Disease.

The local governance group will focus on five key areas:

1. Provide operational oversight to the service as it transitions
2. Integrate service developments and existing services into one coherent model locally (reflecting Fig 1)
3. Provide senior leadership on servicing integrated pathways (exemplified by shared resources and personnel)
4. Support clinical and operational leadership in implementation of discrete service elements (e.g. specialist ambulatory care hub)
5. Facilitate the delivery of enablers, particularly data collection in order to drive service improvement

Example of local governance leadership structure

The leadership of the change process is critically important. The leadership group are primarily representative of and attend to key service developments. Professional requirements (e.g. WTE resource is addressed as part of the HR/Project Management component). The ‘appointment’ of a clinical lead and service improvement lead in each local health economy (CHO/Acute Hospitals (AH)) is essential.

Example of tasks for local group/working group

 Living well with support	• Asset mapping of resources • Communications and awareness • Promote COPD and Asthma Advice line • Promote the implementation of MECC • Promote the use of Self-Management Support (SMS) directories • Support delivery of SMS Education courses • Promote referral to cardiac and pulmonary rehab, diabetes prevention, weight management and self-management services	• Referrals to preventative interventions • Evaluate uptake on COPD Asthma Advice line • Staff trained in MECC • The number of MECC interventions delivered • Number of individuals who have completed an SMS course
 Ambulatory Care Pathways	• Implement the modified GP Contract for Chronic Disease	• As per nationally agreed dataset
 Ambulatory Care Pathways	• Demand and capacity planning (Profiling population by CHN) • Profiling services (directory) • Develop liaison linkages between Specialist Chronic Disease Team, GPs, primary care and acute hospitals • Define and develop priority care pathways in line with Models of Care (MOC) • Develop and implement a communications strategy for the specialist team targeted at HCP and public • Support a CPD and Practice Development for team members	• Activity data for members of the Specialist Chronic Disease Team
 Inpatient pathways	• Adopt a ‘Home First’ focus • Implement Inpatient Pathways as per Chronic Disease national models of care • Address early supported discharge component between care settings –utilising Specialist Hub teams	Hospital discharges, LOS, and pulmonary outreach data.

The scope of the LGG would also address the following:

- To ensure the project remains aligned with the national service model and 10-step framework.
- To ensure the project remains within the scope is implemented within the agreed timelines and within the allocated budget.
- Set up working group teams as required managing elements of the project work.
- To oversee the development and delivery of the Specialist Chronic Disease Teams and to ensure that dependencies between individual work streams are managed and their work remains aligned with the model of integration described in the Chronic Disease Model of Care.
- To ensure the project makes the most of existing resources.
- To escalate emerging issues which need to be addressed by the governance group.
- To ensure that national education programmes relevant to the care of patients with chronic disease are offered to key staff locally.

Activity Targets

Chronic Disease Management Hub					
Roles	WTE per Hub	Client Profile/ Threshold of Clients	Number / % of hub population (150,000) that will be targeted	Activity per WTE/No. of patients seen annually	Total activity for CDM hub team
CDM Community Specialist Team					
Clinical nurse Specialist for Cardiovascular Disease (CVD)	3.0	Individuals with heart failure and multimorbid individuals with CVD	5,880 patients per hub	1,000	3,000
Clinical Nurse Specialist for Respiratory Disease	3.0	Approximately 30% of individuals with COPD and Asthma have complicated disease	6,702 patients per hub	1,000	3,000
Clinical Nurse Specialist for Diabetes	3.0	Individuals with either Type 1 diabetes or Type 2 Diabetes with complicated disease	2,964 patients per hub	1,000	3,000
Diabetes Dietitian	3.0	Individuals with newly diagnosed diabetes and individuals with established diabetes who have not yet participated in the Diabetes Structured Patient Education programme	300 patients with newly diagnosed diabetes per hub per annum	285 patient educations sessions	855 patient education sessions
			7,800 existing patients	720 clinic appointments annually	2,160 clinic appointments annually

Respiratory physiotherapist	3.0	Individuals with diagnosis of COPD and asthma who have complicated disease	6,702 patients per hub	1,350	4,050
Podiatrist	3.0	Patients with diabetes at moderate/high risk of foot disease. Also 3% of diabetic patients at any time have active foot disease	7,800 patient visits annually	1,800	5,400
Diabetes Prevention/ dietitian or Nurse	1.5	The diabetes prevention programme is to be supplied to people with HbA1c in the pre-diabetes range	8,370 people per hub with pre-diabetes	560 patient education sessions	840 patient education sessions
				400 clinic appointments	600 clinic appointments
Weight Management Dietitian	1.5	The weight management programme will be supplied to individuals with obesity and 2 or more co-morbidities	13,500 individuals with obesity and multimorbidity per hub	560 patient education sessions	840 patient education sessions
				400 clinic appointments	600 clinic appointments
Pulmonary Rehabilitation Team					
Pulmonary Physician oversight, Programme coordinator (Physiotherapist), Respiratory Nurse Specialist, Physiotherapy Assistant or additional Physiotherapist or additional Respiratory Nurse Specialist & Administration support	3.7	Patients who have been discharged following acute exacerbation of COPD	370 patients per hub		675 sessions per annum
Cardiac Rehabilitation hub Team					
Clinical director Oversight, Programme Coordinator (Cardiac Nurse Specialist, Physiotherapist, Cardiac Nurse, Clinical Psychologist & administration support	3.9	Patients who have been discharged following a myocardial infarct or a revascularisation event together with those with heart failure	290 patient per hub		675 sessions per annum

Activities undertaken and throughput on the various roles in the network team

APPENDIX 1

List of programme specific resources to support chronic disease specialist teams:

Respiratory

COPD

<https://www.hse.ie/eng/about/who/cspd/ncps/copd/resources/programme-documents-resources.html>

These include the following documents

- **A guidance document for setting up COPD Outreach for healthcare professionals**

Job Specification & Terms and Conditions

Summary of job description for Integrated Care Consultant Post for Cardiology/Respiratory/Endocrinology

- The Integrated Care Consultant post for Cardiology, Respiratory and Endocrinology are new posts created to support a shift in health care provision, which is now required to focus on integrated, person centered care based as close to home as possible. The commitment for this post is 39 hours per week, 50% of which will be committed to hospital based services and 50% committed to work within the associated community ambulatory care hubs. This is a new full-time post, designed to support the development and implementation of cardiology/respiratory/endocrinology medicine as part of integrated care.
- The Integrated Care Consultant will provide leadership in the provision of chronic disease ambulatory care within the specialist ambulatory care hub and support the development of integrated services across the wider region served by the ambulatory care hub.
- The Integrated Care Consultant will promote and aid co-ordination and integration of chronic disease care between primary and secondary health care and relevant social care agencies. This will include functions such as participation in the Local Governance Group for Integrated Care in Chronic Disease, participation in multidisciplinary meetings and case management activities to manage complex cases.
- The Integrated Care Consultant will engage with other consultant colleagues in the hospital to provide ambulatory care services to and within the hub as locally agreed, and will link with consultants in other chronic disease specialties within their hospital to facilitate hospital and community integration.
- The Consultant, in partnership with the chronic disease specialist team, will lead out on the development and implementation of clear pathways, referral modes, alternative outpatient pathways and will work across the hospital and hub environments to support continuity of care, early discharge and hospital avoidance, where possible.
- The Consultant will work closely with the chronic disease specialist team to provide holistic patient-centered care with a focus on treating patients as close to home as possible. To that end, the consultant will also liaise with patients' GPs or other Health and Social Care Professionals within the community to support the provision of this care.
- The Consultant will lead the development and implementation of the alternative outpatient pathways at hospital and ambulatory care level.
- The Consultant will be required to lead out on the development of an educational programme across the hub and hospital setting that supports the integrated care agenda.

- The Consultant will work with the National Clinical Programmes, the chronic disease programmes, the Integrated Care Programme for the Prevention and Management of Chronic Disease and the National Clinical Advisor and Group Lead for Chronic Disease to develop integrated care.
- The Consultant will assess and manage patients with complex symptoms in the community, liaising where appropriate, with the other medical specialty services within the hub.
- The Consultant will provide oversight and drive implementation of self-management support services for chronic disease.
- The Consultant will provide improved integration of early discharge, outreach and admission avoidance programmes.
- The Consultant will visit regularly and be responsible for the medical care and treatment of patients under his/her charge in the hospital.
- The Consultant will contribute to general hospital on-call services.
- The Consultant will promote and further develop disease prevention measures in their respective medical specialty.
- The Consultant will act as an advisor on case finding mechanisms for individuals with undiagnosed chronic disease.
- The Consultant will act as a resource and provider of specialist expertise in area of cardiology/respiratory/endocrinology on public health initiatives for the local population.
- The Consultant will embrace service redesign as appropriate.

Advanced Nurse Practitioner Candidate (cANP) Diabetes

Job Specification & Terms and Conditions

Job Title and Grade	Advanced Nurse Practitioner (cANP) Diabetes <i>(Grade Code:2272)</i> The candidate ANP is required to progress to registration with Bord Altranais agus Cnáimhseachais na hÉireann (Nursing and Midwifery Board of Ireland) (NMBI) as a Registered Advanced Nurse Practitioner (RcANP) within 3 years of commencement of this post and appointment to post as RcANP.
Purpose of the Post	Background to the Post The need to reform the healthcare services in Ireland in order to provide a more sustainable, integrated and patient-centred approach has come to the fore in recent health policies and strategies. Integrated care requires health and social care services to work together across different levels and sites in order to provide end-to-end care that meets patient need. As described in the Sláintecare report (2017), integrated care involves: • Ensuring appropriate care pathways are developed with a focus on person-centred service planning to ensure services are built around patients; • Supporting timely access to all health and social care services according to • medical need; and, • Patients accessing care at the most appropriate, cost effective service level with a strong emphasis on prevention and public health. The cANP Diabetes will develop and lead a service for patients / service users with diabetes, with an emphasis on providing care across the acute hospital and community setting. The registered advanced practice service is provided by nurses who practice at a higher level of capability, autonomy and provide expert advanced decision making The overall purpose of the cANP Diabetes service is to provide safe, timely, evidenced based nurse-led care to patients at an advanced nursing level .This involves undertaking and documenting complete episodes of patient care, which includes comprehensively assessing, diagnosing, planning, treating and discharging patients in accordance with collaboratively agreed local policies, procedures, protocols and guidelines and/or service level agreements/ memoranda of understanding. The cANP (Diabetes) demonstrates advanced clinical and theoretical knowledge, critical thinking, clinical leadership and complex decision-making abilities. The cANP (Diabetes) practices in accordance with the Code of Professional Conduct and Ethics for Registered Nurses and Registered Midwives (NMBI 2014), the Scope of Nursing and Midwifery

	Practice Framework (NMBI 2015), Advanced Practice (Nursing) Standards and Requirements (NMBI 2017), and the Values for Nurses and Midwives in Ireland (Department of Health 2016). The cANP (Diabetes) service provides clinical leadership and professional scholarship in the delivery of optimal nursing services and informs the development of evidence based health policy at local, regional and national levels. The cANP (Diabetes) contributes to nursing research that shapes and advances nursing practice, education and health care policy at local, national and international levels. The post requires a cANP (Diabetes) with the scope of practice that represents the diverse inpatient population of the hospital; reflecting diabetes care across age groups and diabetes types In collaboration with dietetic colleagues, the cANP (Diabetes) will take a lead role in the co-ordination, delivery and reporting of diabetes self-management education for individuals with Type 1 diabetes within the hospital and associated networks.
Principle Duties and Responsibilities	The cANP (Diabetes) practices to a higher level of capability across six domains of competence as defined by Bord Altranais agus Cnáimhseachais na hÉireann Advanced Practice (Nursing) Standards and Requirements (NMBI 2017). The six domains of competence are as follows: • Professional Values and Conduct • Clinical-Decision Making • Knowledge and Cognitive Competences • Communication and Interpersonal Competences • Management and Team Competences • Leadership and Professional Scholarship Competences Each of the six domains specifies the standard which the cANP (Diabetes) has a duty and responsibility to develop and demonstrate at registration. Domain 1: Professional Values and Conduct Standard 1 The cANP (Diabetes) will apply ethically sound solutions to complex issues related to individuals and populations by: • Demonstrating accountability and responsibility for professional practice as a lead healthcare professional for a diverse client age diabetes care need

	• Articulating safe boundaries and engaging in timely referral and collaboration for those areas outside his/her scope of practice, experience, and competence using established referral pathways as per locally agreed policies, procedures, protocols and guidelines • Demonstrating leadership by practising compassionately to facilitate, optimise, promote and support the health, comfort, quality of life and wellbeing of persons whose lives are affected by altered health, chronic disorders, disability, distress or life-limiting conditions. The cANP practices according to a professional practice model that provides him/her latitude to control his/her own practice, focusing on person centred care, interpersonal interactions and the promotion of healing environments The chosen professional practice model for nursing should reflect the individual needs of a diverse client group which emphasises a caring therapeutic relationship between the cANP and his/her patients, recognising that cANPs work in partnership with their multidisciplinary colleagues² 1 The caseload and scope of practice for the Registered Advanced Nurse Practitioner service will evolve to reflect changing service needs 2 Slatyer S., Coventry L.L., Twigg D.L., & Davis S. (2016) Professional practice models for nursing: a review of the literature and synthesis of key components. <i>Journal of Nursing Management</i> 24, 139-150 • Articulating and promoting the cANP role in clinical, political and professional contexts by (for example presenting key performance outcomes locally and nationally; contributing to the service’s annual report; participating in local and national committees to ensure best practice as per the relevant national clinical and integrated care programme). Domain 2: Clinical-Decision Making Competences Standard 2 The cANP (Diabetes) will utilise advanced knowledge, skills, and abilities to engage in senior clinical decision making by: • Conducting a comprehensive holistic health assessment using evidenced based frameworks, policies, procedures, protocols and guidelines to determine diagnoses and inform autonomous advanced nursing care • Synthesising and interpreting assessment information particularly history including prior treatment outcomes, physical findings and diagnostic data to identify normal, at risk and subnormal states of health • Demonstrating timely use of diagnostic investigations / additional evidence-based advanced assessments to inform clinical-decision making
--	---

	• Exhibiting comprehensive knowledge of therapeutic interventions including pharmacological and non-pharmacological advanced nursing interventions, supported by evidence-based policies, procedures, protocols, and guidelines, relevant legislation, and relevant professional regulatory standards and requirements • Initiating and implementing health promotion activities and self-management plans in accordance with the wider public health agenda • Discharging patients from the service as per an agreed supporting policy, procedure, protocols, guidelines and referral pathways Domain 3: Knowledge and Cognitive Competences Standard 3 The cANP (Diabetes) will actively contribute to the professional body of knowledge related to his/her area of advanced practice by: • Providing leadership in the translation of new knowledge to clinical practice by for example, teaching sessions; journal clubs; case reviews; facilitating clinical supervision to other members of the team • Educating others using an advanced expert knowledge base derived from clinical experience, on-going reflection, clinical supervision and engagement in continuous professional development • Demonstrating a vision for advanced practice nursing based on service need and a competent expert knowledge base that is developed through research, critical thinking, and experiential learning • Demonstrating accountability in considering access, cost and clinical effectiveness when planning, delivering and evaluating care (for example key performance areas, key performance indicators, and metrics). Domain 4: Communication and Interpersonal Competences Standard 4 The cANP (Diabetes) will negotiate and advocate with other health professionals to ensure the beliefs, rights and wishes of the person are respected by: • Communicating effectively with the healthcare team through sharing of information in accordance with legal, professional and regulatory requirements as per established referral pathways
--	--

- Demonstrating leadership in professional practice by using professional language (verbally and in writing) that represents the plan of care, which is developed in collaboration with the person and shared with the other members of the inter-professional team as per the organisation's policies, procedures, protocols and guidelines
- Facilitating clinical supervision and mentorship through utilising one's expert knowledge and clinical competences
- Utilising information technology, in accordance with legislation and organisational policies, procedures, protocols and guidelines to record all aspects of advanced nursing care.

Domain 5: Management and Team Competences

Standard 5

The cANP (Diabetes) will manage risk to those who access the service through collaborative risk assessments and promotion of a safe environment by:

- Promoting a culture of quality care
- Proactively seeking quantitative and qualitative feedback from persons receiving care, families and members of the multidisciplinary team on their experiences of the service, analysing same and making suggestions for improvement
- Implementing practice changes using negotiation and consensus building, in collaboration with the multidisciplinary team and persons receiving care.

Domain 6: Leadership and Professional Scholarship Competences

Standard 6

The cANP (Diabetes) will lead in multidisciplinary team planning for transitions across the continuum of care by:

- Demonstrating clinical leadership in the design and evaluation of services by for example, findings from research, audit, metrics, new evidence)
- Engaging in health policy development, implementation, and evaluation by for example, key performance indicators from national clinical and integrated care programme/HSE national service plan/ local service need to influence and shape the future development and direction of advanced practice in diabetes care

- Identifying gaps in the provision of care and services pertaining to his/her area of advanced practice and expand the service to enhance the quality, effectiveness and safety of the service in response to emerging healthcare needs
- Leading in managing and implementing change.

Education and Training

The cANP **Diabetes** will:

- Contribute to service development through appropriate continuous education, research initiatives, keeping up to date with nursing literature, recent nursing research and new developments in nursing practice, education and management.
- Provide support and advice to those engaging in continuous professional development in his/her area of advanced nursing practice.

KPI's

- The identification and development of Key Performance Indicators (KPIs) which are congruent with the Hospital's service plan targets.
- The development of Action Plans to address KPI targets.
- Driving and promoting a Performance Management culture.
- In conjunction with line manager assist in the development of a Performance Management system for your profession.
- The management and delivery of KPIs as a routine and core business objective.

PLEASE NOTE THE FOLLOWING GENERAL CONDITIONS:

- Employees must attend fire lectures periodically and must observe fire orders.
- All accidents within the Department must be reported immediately.
- Infection Control Policies must be adhered to.
- In line with the Safety, Health and Welfare at Work Acts 2005 and 2010 all staff must comply with all safety regulations and audits.
- In line with the Public Health (Tobacco) (Amendment) Act 2004, smoking within the Hospital Buildings is not permitted.
- Hospital uniform code must be adhered to.
- Provide information that meets the need of Senior Management.
- To support, promote and actively participate in sustainable energy, water and waste initiatives to create a more sustainable, low carbon and efficient health service.

Risk Management, Infection Control, Hygiene Services and Health & Safety

- The management of Risk, Infection Control, Hygiene Services and Health & Safety is the responsibility of everyone and will be achieved within a progressive, honest and open environment.
- The post holder must be familiar with the necessary education, training and support to enable them to meet this responsibility.
- The post holder has a duty to familiarise themselves with the relevant Organisational Policies, Procedures & Standards and attend training as appropriate in the following areas:

- Continuous Quality Improvement Initiatives

	○ Document Control Information Management Systems ○ Risk Management Strategy and Policies ○ Hygiene Related Policies, Procedures and Standards ○ Decontamination Code of Practice ○ Infection Control Policies ○ Safety Statement, Health & Safety Policies and Fire Procedure ○ Data Protection and confidentiality Policies
	● The post holder is responsible for ensuring that they become familiar with the requirements stated within the Risk Management Strategy and that they comply with the Group’s Risk Management Incident/Near miss reporting Policies and Procedures. ● The post holder is responsible for ensuring that they comply with hygiene services requirements in your area of responsibility. Hygiene Services incorporates environment and facilities, hand hygiene, catering, cleaning, the management of laundry, waste, sharps and equipment. ● The post holder must foster and support a quality improvement culture through-out your area of responsibility in relation to hygiene services. ● The post holders’ responsibility for Quality & Risk Management, Hygiene Services and Health & Safety will be clarified to you in the induction process and by your line manager. ● The post holder must take reasonable care for his or her own actions and the effect that these may have upon the safety of others. ● The post holder must cooperate with management, attend Health & Safety related training and not undertake any task for which they have not been authorised and adequately trained. ● The post holder is required to bring to the attention of a responsible person any perceived shortcoming in our safety arrangements or any defects in work equipment. ● It is the post holder’s responsibility to be aware of and comply with the HSE Health Care Records Management/Integrated Discharge Planning (HCRM / IDP) Code of Practice.

Clinical Nurse Specialist (Diabetes – Integrated Care)

Job Specification & Terms and Conditions

Job Title and Grade	Clinical Nurse Specialist (Diabetes – Integrated Care) (Grade Code: 2632)
Purpose of the Post	The purpose of this Clinical Nurse Specialist (Diabetes – Integrated Care) post is to: Deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse Specialist Posts, 4th edition, National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The CNS will work as part of a multidisciplinary team who will be responsible for implementing the delivery of the Model of Integrated Care for Patients Type 2 Diabetes (2018) within the community healthcare network and community healthcare organisation. In line with the Model of Care, 80% of the CNS role will involve working with General Practitioners (GP’s) and MDT’s in Primary Care and 20% of CNS role will involve working in Secondary Care. There will be a strong focus on service integration and team-working. This post will also involve the core elements of the CNS post to include clinical audit and research.
Principal Duties and Responsibilities	The post holder’s practice is based on the five core concepts of Clinical Nurse Specialist (Diabetes – Integrated Care) role as defined by the NCNM 4th edition (2008) in order to fulfil the role. The concepts are: • Clinical Focus • Patient/Client Advocate • Education and Training • Audit and Research • Consultant Clinical Focus Clinical Nurse Specialist (Diabetes – Integrated Care) will have a strong patient focus whereby the specialty defines itself as Nursing and subscribes to the overall purpose, functions and ethical standards of Nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/or carer. Indirect care relates to activities that influence and support the provision of direct care. Direct Care <i>Clinical Nurse Specialist (Diabetes – Integrated Care) will:</i> • Provide a specialist nursing service for patients with a diagnosis of Diabetes who require support and treatment through the continuum of care. • Undertake comprehensive patient assessment to include physical, psychological, social and spiritual elements of care using best evidence based practice in Diabetes care. • Use the outcomes of patient assessment to develop and implement plans of care/case management in conjunction with the multi-disciplinary team (MDT) and the patient, family and/or carer as appropriate.

- Monitor and evaluate the patient's response to treatment and amend the plan of care accordingly in conjunction with the MDT and patient, family and/or carer as appropriate.
- Make alterations in the management of patient's condition in collaboration with the MDT and the patient in line with agreed pathways and policies, procedures, protocols and guidelines (PPPG's).
- Accept appropriate referrals from MDT colleagues.
- Co-ordinate investigations, treatment therapies and patient follow-up.
- Communicate with patients, family and /or carer as appropriate, to assess patient's needs and provide relevant support, information, education, advice and counselling as required.
- Where appropriate work collaboratively with MDT colleagues across Primary and Secondary Care to provide a seamless service delivery to the patient, family and/or carer as appropriate.
- Participate in medication reconciliation taking cognisance of poly-pharmacy and support medical and pharmacy staff with medication reviews and medication management.
- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation pathways.
- Identify health promotion priorities for the patient, family and/or carer and support patient self-care in line with best evidence. This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patient's needs.
- Support the initiation and continuing care of patients with Type 2 Diabetes who have been commenced on insulin/injectable therapy.
- Fast track emergency referrals e.g. patients with urinary ketones or foot ulcerations to the appropriate member of the MDT for review and collaborative management planning.

Indirect Care

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Identify and agree appropriate referral pathways for patients with Diabetes.
- Participate in case review with MDT colleagues.
- Use a case management approach to patients with complex needs in collaboration with MDT in both Primary and Secondary Care as appropriate.
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to Diabetes care.
- Take a lead role in ensuring the service for patients with Diabetes is in line with best practice guidelines and the Safer Better Healthcare Standards (HIQA, 2012).

Patient/Client Advocate

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Communicate, negotiate and represent patient's family and/or carer values and decisions in relation to their condition in collaboration with MDT colleagues in both Primary and Secondary Care as appropriate.
- Develop and support the concept of advocacy, particularly in relation to patient participation in decision making, thereby enabling informed choice of treatment options

- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer.
- Establish, maintain and improve procedures for collaboration and cooperation between Acute Services, Primary Care and Voluntary Organisations as appropriate.
- Proactively challenge any interaction which fails to deliver a quality service to patients.

Education & Training:

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Maintain clinical competence in patient management within Diabetes Nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice.
- Provide the patient, family and/or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their Diabetes.
- Contribute to the design, development and implementation of education programmes and resources for the patient, family and/or carer in relation to Diabetes thus empowering them to self-manage their condition.
- Provide mentorship and preceptorship for nursing colleagues as appropriate.
- Participate in training programmes for Nursing, MDT colleagues and key stakeholders as appropriate.
- Create exchange of learning opportunities within the MDT in relation to evidence based Diabetes care delivery through journal clubs, conferences, etc.
- Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in Diabetes care.
- Be responsible for addressing own continuing professional development needs

Audit & Research:

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Establish and maintain a register of patients with Diabetes within Clinical Nurse Specialist Caseload.
- Maintain a record of clinically relevant data aligned to National Key Performance Indicators (KPI's) as directed and advised by the, DPHN, National Clinical Programme and senior management.
- Identify, initiate and conduct Nursing and MDT audit and research projects relevant to the area of practice.
- Identify, critically analyse, disseminate and integrate best evidence relating to Diabetes care into practice.
- Contribute to nursing research on all aspects of Diabetes care.
- Use the outcomes of audit to improve service provision.
- Contribute to service planning and budgetary processes through use of audit data and specialist knowledge.
- Monitor, access, utilise and disseminate current relevant research to advise and ensure the provision of informed evidence based practice.

Audit expected outcomes including:

- Collate data on agreed KPIs and outcome measures which will provide evidence of the effectiveness of Clinical Nurse Specialist (Diabetes-Integrated Care). Refer to the National Council for the Professional Development of Nursing and Nursing final report - *Evaluation of Clinical Nurse and Midwife Specialist and Advanced Nurse and Midwife Practitioner roles in Ireland* (SCAPE Report, 2010) and refer to the National KPIs associated with the speciality. They should have a clinical Nursing focus as well as a breakdown of activity - patients seen and treated.
- Evaluate audit results and research findings to identify areas for quality improvement in collaboration with nursing management and MDT colleagues (Primary and Secondary Care).

Consultant:

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Provide leadership in clinical practice and act as a resource and role model for Diabetes practice.
- Generate and contribute to the development of clinical standards and guidelines and support implementation.
- Use specialist knowledge to support and enhance generalist nursing practice.
- Develop collaborative working relationships with local Diabetes Clinical Nurse Specialist /Registered Advanced Nurse Practitioner/MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery.
- With the support of the Director of Nursing, attend integrated care planning meetings as required.
- Where appropriate develop and maintain relationships with specialist services in voluntary organisations which support patients in the community.
- Liaise with other health service providers in the development and on-going delivery of the National Clinical Programme model of care.
- Network with other Clinical Nurse Specialist in Diabetes **and** in related professional associations.

Health & Safety:

These duties must be performed in accordance with local organisational and the HSE health and safety policies. In carrying out these duties the employee must ensure that effective safety procedures are in place to comply with the Health, Safety and Welfare at Work Act (2005). Staff must carry out their duties in a safe and responsible manner in line with the local policy documents and as set out in the local safety statement, which must be read and understood.

Quality, Risk and Safety Responsibilities

It is the responsibility of all staff to:

- Participate and cooperate with legislative and regulatory requirements with regard to quality, risk and safety.
- Participate and cooperate with local quality, risk and safety initiatives as required.
- Participate and cooperate with internal and external evaluations of the organisation's structures, services and processes as required, including but not limited to, The National

Hygiene Audit, National Decontamination Audit, Health and Safety Audits and other audits specified by the HSE or other regulatory authorities.

- Initiate, support and implement quality improvement initiatives in their area which are in keeping with local organisational quality, risk and safety requirements.
- Contribute to the development of PPPGs and safe professional practice and adhere to relevant legislation, regulations and standards.
- Comply with Health Service Executive (HSE) Complaints Policy.
- Ensure completion of incident/near miss forms and clinical risk reporting.
- Adhere to department policies in relation to the care and safety of any equipment supplied and used to carry out the responsibilities of the role of Clinical Nurse Specialist in Diabetes care.

Specific Responsibility for Best Practice in Hygiene

Hygiene is defined as: "The practice that serves to keep people and environments clean and prevent infection. It involves the study of preserving one's health, preventing the spread of disease, and recognising, evaluating and controlling health hazards. In the healthcare setting it incorporates the following key areas: environment and facilities, hand hygiene, catering, management of laundry, waste and sharps, and equipment" (HIQA, 2008; P2). It is the responsibility of all staff to ensure compliance with local organisational hygiene standards, guidelines and practices.

Management/Administration:

Clinical Nurse Specialist (Diabetes - Integrated Care) will:

- Provide an efficient, effective and high quality service, respecting the needs of each patient, family and/or carer.
- Effectively manage time and caseload in order to meet changing and developing service needs.
- Continually monitor the service to ensure it reflects current needs.
- Implement and manage identified changes.
- Ensure that confidentiality in relation to patient records is maintained.
- Represent the specialist service at local, national and international fore as required.
- Maintain accurate and contemporaneous records and data on all matters pertaining to the planning, management, delivery and evaluation of care and ensure that this service is in line with HSE requirements.
- Contribute to the service planning process as appropriate and as directed by the DPHN
- Have a working knowledge of the Health Information and Quality Authority (HIQA) Standards as they apply to the role for example, Standards for Healthcare, National Standards for the Prevention and Control of Healthcare Associated Infections, Hygiene Standards etc and comply with associated HSE protocols for implementing and maintaining these standards as appropriate to the role.
- To support, promote and actively participate in sustainable energy, water and waste initiatives to create a more sustainable, low carbon and efficient health service.

The above Job Specification is not intended to be a comprehensive list of all duties involved and consequently, the post holder may be required to perform other duties as appropriate to the post which may be assigned to him/her from time to time and to contribute to the development of the post while in office.

Clinical Nurse Specialist (CNSp), Respiratory – Acute Job Specification,

Job Title and Grade	Clinical Nurse Specialist Respiratory – Acute
Purpose of the Post	The role of the CNSp will differ according to the needs and configuration of established respiratory services at each site. The purpose of this Clinical Nurse Specialist Respiratory – Acute Integrated Care post was developed to: provide expertise and specialist nursing services to patients with a respiratory condition both in the ward, hospital outpatient settings and in primary care. The post holder will liaise between acute respiratory services and integrated respiratory services in the community along with other agencies to deliver effective evidenced based care. They will use resources efficiently to achieve the best possible outcomes in keeping with the NCP Programme model of care and HIQA standards. The person appointed to this post will work in the overall integrated respiratory service. This post is 50% acute based and 50% community based to work with the Consultant in Respiratory Medicine, Lead in Integrated Respiratory Care and General Internal Medicine in further development of integrated care services. The post holder will work as part of a multidisciplinary team delivering coordinated evidence based care for respiratory patients. Please note a portion of the appointees work will be carried out “offsite”. This means that the appointee will travel to the hubs to perform duties related to the role. They will work with colleagues across the integrated care services to develop and implement ambulatory care pathways to improve the transition of patients between primary and secondary care. The post holder will work as part of a multidisciplinary team and in close liaison with their associated Consultant Respiratory Physician to deliver coordinated evidence based care for patients. In order to ensure continuity of service to patients the CNSp may be required to rotate/cover other parts of the integrated respiratory service such as Respiratory Integrated Care and Outreach. This will also promote service integration and enhance skillset development. It will be dependent on identified service needs at each site. If deemed appropriate, site rotation should occur within the first 3-6 months of taking up the post. The Clinical Nurse Specialist’s caseload will focus initially on the following patient groups. - COPD - Asthma - General acute respiratory
Principal Duties and Responsibilities	The CNSp will deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse/Midwife Specialist Post, 4th ed. National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The concepts are: - Clinical Focus - Patient/Client Advocate - Education and Training

	• Audit and Research • Consultant Whereby the CNSp is required to rotate into Outreach or Respiratory Integrated Care, some aspects of their primary role under these headings may alter to include additional duties such as home visits, primary care centre visits, oxygen assessments and nurse led spirometry clinics. Clinical Focus The CNSp. will have a strong patient focus whereby the specialty defines itself as nursing and subscribes to the overall purpose, functions and ethical standards of nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/or carer. Indirect care relates to activities that influence others in their provision of direct care. The CNSp will work in conjunction with other team members in co-ordinating and developing the Integrated Care service to meet the needs of the population it serves in line with the objectives of the organisation. Direct Care: • Provide a specialist nursing service for patients with respiratory disease that incorporates evidence based knowledge, investigative and analytical skills and specialist assessment techniques to triage comprehensibly assess and manage a range of complex presentations. • Use the outcomes of patient assessment to develop and implement plans of care in conjunction with MDT colleagues, the patient and /or carer providing and receiving complex sensitive information, taking into account physical, psychological and social care needs when taking a clinical history and assessing patients. • Monitor and ensure maintenance of adequate and effective discharge planning for patients with respiratory disease to include devising pathways to link patients with other integrated respiratory services. • Work in collaboration with other members of the multidisciplinary team to assess, plan, implement and evaluate care for patients within the respiratory service in a person centred manner. This will include: • Titration of prescribed medicines within agreed protocols • Provide spirometry service to confirm differential diagnosis and staging of disease if not previously undertaken. • Review and assess patients inhaler treatments make adjustments / recommendations on treatment plans and facilitate onward referral as appropriate. • If a Registered Nurse Prescriber (RNP) the nurse must work within the scope of their practice and adhere to the regulations set down by NMBI pertaining to this role and, local policy requirements.
--	---

	• Monitor and evaluate the patient’s response to treatment and amend the plan of care accordingly in conjunction with the GP/Consultant/MDT and patient, family and/or carer as appropriate. • Evaluate clinical problems using objective measurement tools e.g. Spirometry, Arterial Blood Gases (ABG) in conjunction with other team members, co-ordinate investigations, therapies and patient follow-up in secondary or primary care as appropriate. • Provide specialist interventions including, sputum clearance, relaxation, breathing control, exercise and breathlessness management • Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation/de-escalation plans. • Use agreed direct pathway for patients who may present/become clinically unwell at time of attending/engaging with the service • Identify health promotion priorities for the patient, family and/or carer and support patient self-care in line with best evidence and utilising principles laid out by MECC (Make Every Contact Count). This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patients’ needs. • Assess patient understanding of treatment proposals, gain informed consent and have the capacity to work within a legal framework with patients who lack capacity to consent to treatment. • Provide psychological support for patients and their families. • Communicate with patients, families and friends, assess needs and provide relevant support, information, education, advice and counselling when and where necessary. Indirect Care: • Manage, develop and evaluate admission avoidance pathways with GPs, Consultant and integrated teams. • Participate in case reviews with MDT colleagues as required. • Use a case management approach to patients with complex needs in collaboration with MDT in both Primary and Secondary Care • Take a proactive role in the formulation and provision of evidence based PPPGs relating to Integrated and Acute Care. Contribute to the development and implementation of information sharing protocols, audit systems, referral pathways, individual care plans and shared care arrangements through regular collaboration/meetings with respiratory nurses locally and nationally. • Manage clinical risk within own clinical caseload, to have up to date knowledge of indications, contraindications and precautions for any treatment skills and techniques selected and applied throughout an individual course of treatment. • Arrange referrals to other appropriate specialist services as deemed necessary • Refer for further clinical psychological evaluation if felt necessary or requested by the patient and/or their family.
--	---

- Effectively manage time and caseload in order to meet the needs of an evolving service
- Work closely with colleagues across services in order to provide a seamless integrated service for the patient
- Identify and utilise professional and voluntary resources and facilities at local and national level by direct and indirect referral
- Refer to relevant services to assist with procurement of domiciliary equipment and respiratory therapies that may be required by the patient such as oxygen
- Participate in the Departmental Clinical Governance processes, working in partnership with the Head of Departments, CNM3/ADON, and Clinical Governance lead and local respiratory governance groups.
- Ensure that effective clinical governance procedures are maintained and evolve according to defined needs and demands in Respiratory care.
- Maintain professional standards including patient and data confidentiality in line with HSE policy
- Develop and implement strategies as part of the Integrated Care team for delivering effective care within a changing environment using IT and alternative delivery strategies as needed.

Patient Advocate

Clinical Nurse Specialist, Respiratory – Acute Integrated Care will:

- Communicate, negotiate and represent patient's family and/or carer values and decisions in relation to their condition in collaboration with MDT colleagues in both Primary and Secondary Care as appropriate
- Develop and support the concept of advocacy particularly in relation to patients' participation in decision making thereby enabling informed choice of treatment options.
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer
- Establish, maintain and improve procedures for collaboration and cooperation between acute services, Community services, Primary Care and voluntary organisations as appropriate.
- Proactively challenge any interaction which fails to deliver a quality service to patients.
- Take appropriate action on any matter identified as being detrimental to staff and/or service user care or wellbeing which may inhibit the effective provision of effective care.
- Participate in meetings as a patient and service representative when requested to advocate and support the development of services/staff in respiratory care
- Support the development of local patient advocacy groups pertinent to specialty
- Contribute to case conferencing meetings with supporting consultant and other members of the MDT
- Provide and advocate for appropriate assessments, supports and strategies for patients with disease related changes and difficulties.

Education and Training

Clinical Nurse Specialist, Respiratory – Acute Care will:

- Maintain clinical competence in patient management within respiratory nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice.
- Provide the patient, family and/or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their respiratory conditions.
- Contribute to the design, development and implementation of education programmes and resources for the patient, family and/or carer in relation to Asthma and/or COPD thus empowering them to manage their own condition independently and autonomously.
- Provide mentorship and preceptorship for nursing colleagues as appropriate.
- Participate in training programmes for nursing, MDT colleagues and key stakeholders as appropriate.
- Address the educational needs of nursing and other professionals by participating in or facilitating training programmes for all members of the MDT.
- Create exchange of learning opportunities within the MDT in relation to evidence based respiratory care delivery through journal clubs, conferences etc.
- Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in respiratory care
- Be responsible for addressing own continuing professional development needs.
- Develop and deliver education and training programmes for the wider primary and secondary care MDTs as requested or deemed necessary
- Seek advice and assistance with assigned cases which prove to be beyond the scope of their professional competence

Audit and Research

Clinical Nurse Specialist, Respiratory – Acute Care will:

- Collect and maintain a record of clinically relevant data aligned to the business intelligence unit (BIU) and National KPI's as directed and advised by the Director of Nursing, the National Clinical Programmes and senior management.
- Provide annual reports/updates on patient numbers and activity levels as required for service planning.
- Identify, initiate and conduct nursing and collaborative MDT audit and research projects relevant to the area of practice.

	- Identify, critically analyse, disseminate and integrate best evidence relating to respiratory care into practice. - Contribute to nursing research on all aspects of Integrated and respiratory care. - Use the outcomes of audit to inform service provision and the need for change - Contribute to service/business planning and budgetary processes through use of audit data and specialist knowledge - Monitor, access, utilise and disseminate current relevant research to advise and ensure the provision of informed evidence based practice. - Contribute to the examination of patients and staff’s experiences when engaging with Integrated and acute respiratory services. - Assures all patient evaluations are performed and results communicated to the appropriate stakeholders. - Represent the department / team at local, national and international meetings and conferences as appropriate. Clinical Nurse Specialist, Respiratory – Acute Care will: - Provide leadership in clinical practice and act as resource in providing specialist knowledge, expertise and care in liaison with the MDT. - Generate and contribute to the development of clinical standards and guidelines and support implementation. - Use specialist knowledge in Respiratory Care to support and enhance generalist nursing/midwifery practice. - Develop collaborative working relationships with local respiratory CNSp’s/Registered and Candidate Advanced Nurse Practitioner GP/Consultant/MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery. - With the support of the DON, attend integrated care planning meetings as required. - Develop and maintain relationships with specialist services in Voluntary Organisations which support patients in the community. - Represent Integrated services at local, national and international meetings as required - Promote the role of the services amongst all health care staff. - Work with, support, advise and help build up the knowledge and expertise of the other healthcare professionals involved in providing care for patients through regular formal and informal education. - Liaise with other chronic disease specialist teams (such as diabetes/heart failure) to discuss joint management/assessment needs of patients as necessary.

Clinical Nurse Specialist (CNSp) Respiratory
Chronic Obstructive Pulmonary Disease (COPD) Outreach
Job Specification,

Job Title and Grade	Clinical Nurse Specialist Respiratory – COPD Outreach
Purpose of the Post	The role of the COPD Outreach team will differ according to the needs and configuration of established respiratory services at each site. The successful candidate will lead COPD Outreach and integrate this service with ambulatory care between the hospital and community services. They will work with colleagues across these services to develop and implement ambulatory care pathways and to manage respiratory disease, and associated co-morbidities, within the community setting, where appropriate. The post holder will develop COPD Outreach services in line with the National Clinical Programme Respiratory Model of Care documents and associated guidance. The person appointed to this post will work in the COPD Outreach Service within the assigned hospital and will be closely aligned with the associated integrated respiratory services. COPD Outreach is a four pronged service offering early supported discharge, assisted discharge, and admission prevention and case management to COPD patients. The post holder will work as part of a multidisciplinary team delivering coordinated evidence based care for patients with COPD. The role of the CNSp Respiratory in COPD Outreach is to provide initial post discharge, person centred care and on-going management of patients with COPD in the home/normal place of residence. The post holder will be a key member of the multidisciplinary team, required to provide a specialist nursing resource within the governance structure created for the programme. They will provide physical, psychological and emotional support to an agreed caseload of COPD Outreach patients and their families throughout their COPD trajectory. In order to ensure continuity of service to patients the CNSp may be required to rotate/cover other parts of the integrated respiratory service such as Respiratory Integrated Care and the Acute service. This will also promote service integration and enhance skillset development. It will be dependent on identified service needs at each site. If deemed appropriate, site rotation should occur within the first 3-6 months of taking up the post. The Clinical Nurse Specialists caseload will focus initially on patients with COPD meeting the inclusion criteria for outreach
Principal Duties and Responsibilities	The CNSp will deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse/Midwife Specialist Post, 4th ed. National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The concepts are: • Clinical Focus • Patient/Client Advocate • Education and Training

- Audit and Research
- Consultant

Whereby the CNSp is required to rotate into Acute services or Respiratory Integrated Care, some aspects of their primary role under these headings may alter to include additional duties such as running clinics in the ambulatory care hub or primary care centre, oxygen assessments and nurse led spirometry clinics.

Clinical Focus

The CNSp. will have a strong patient focus whereby the specialty defines itself as nursing and subscribes to the overall purpose, functions and ethical standards of nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/or carer. Indirect care relates to activities that influence others in their provision of direct care. The CNSp will work in conjunction with other team members in co-ordinating and developing the COPD Outreach service to meet the needs of the population it serves in line with the objectives of the organisation.

Direct Care:

- Provide a specialist nursing service for patients with COPD that incorporates evidence based knowledge, investigative and analytical skills and specialist assessment techniques to triage comprehensibly assess and manage a range of complex presentations.
- Use the outcomes of patient assessment to develop and implement plans of care in conjunction with MDT colleagues, the patient and /or carer providing and receiving complex sensitive information, taking into account physical, psychological and social care needs when taking a clinical history and assessing patients.
- Monitor and ensure maintenance of adequate and effective discharge planning for patients with COPD returning to their own homes after an admission with an exacerbation.
- Admit patients to COPD Outreach service ensuring pre-agreed inclusion/exclusion criteria are adhered too
- Work in collaboration with other members of the multidisciplinary team to assess, plan, implement and evaluate care for patients within the COPD Outreach service in a person centred manner. This will include:
- Titration of prescribed medicines within agreed protocols
- Review and assess patients inhaler treatments make adjustments / recommendations on treatment plans and facilitate onward referral as appropriate.
- If a Registered Nurse Prescriber (RNP) the nurse must work within the scope of their practice and adhere to the regulations set down by NMBI pertaining to this role and, local policy requirements.
- Monitor and evaluate the patient’s response to treatment and amend the plan of care accordingly in conjunction with the GP/Consultant/MDT and patient, family and/or carer as appropriate.

- Evaluate clinical problems using objective measurement tools e.g. Spirometry, Arterial Blood Gases (ABG) in conjunction with other team members, co-ordinate investigations, therapies and patient follow-up in secondary or primary care as appropriate.
- Provide specialist interventions including, sputum clearance, relaxation, breathing control, exercise and breathlessness management
- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation/de-escalation plans.
- Use agreed direct pathway for patients who may present/become clinically unwell at time of attending/engaging with the service
- Provide spirometry service to confirm differential diagnosis and staging of disease if not previously undertaken.
- Identify health promotion priorities for the patient, family and/or carer and support patient self-care in line with best evidence and utilising principles laid out by MECC (Make Every Contact Count). This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patients' needs.
- Assess patient understanding of treatment proposals, gain informed consent and have the capacity to work within a legal framework with patients who lack capacity to consent to treatment.
- Provide psychological support for patients and their families.
- Communicate with patients, families and friends, assess needs and provide relevant support, information, education, advice and counselling when and where necessary.

Indirect Care:

- Manage, develop and evaluate admission avoidance pathways with GPs, Consultant and integrated teams.
- Participate in case reviews with MDT colleagues as required.
- Use a case management approach to patients with complex needs in collaboration with MDT in both Primary and Secondary Care
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to COPD Outreach and Integrated Care. Contribute to the development and implementation of information sharing protocols, audit systems, referral pathways, individual care plans and shared care arrangements through regular collaboration/meetings with respiratory nurses locally and nationally.
- Manage clinical risk within own clinical caseload, to have up to date knowledge of indications, contraindications and precautions for any treatment skills and techniques selected and applied throughout an individual course of treatment.
- Arrange referrals to other appropriate specialist services as deemed necessary

- Refer for further clinical psychological evaluation if felt necessary or requested by the patient and/or their family.
- Effectively manage time and caseload in order to meet the needs of an evolving service
- Work closely with colleagues across services in order to provide a seamless integrated service for the patient
- Identify and utilise professional and voluntary resources and facilities at local and national level by direct and indirect referral
- Refer to relevant services to assist with procurement of domiciliary equipment and respiratory therapies that may be required by the patient such as oxygen
- Participate in the Departmental Clinical Governance processes, working in partnership with the Head of Departments, CNM3/ADON, and Clinical Governance lead and local respiratory governance groups.
- Ensure that effective clinical governance procedures are maintained and evolve according to defined needs and demands in COPD Outreach.
- Maintain professional standards including patient and data confidentiality in line with HSE policy
- Develop and implement strategies as part of the Integrated Care team for delivering effective care within a changing environment using IT and alternative delivery strategies as needed.

Patient Advocate

Clinical Nurse Specialist Respiratory – COPD Outreach will:

- Communicate, negotiate and represent patient's family and/or carer values and decisions in relation to their condition in collaboration with MDT colleagues in both Primary and Secondary Care as appropriate
- Develop and support the concept of advocacy particularly in relation to patients' participation in decision making thereby enabling informed choice of treatment options.
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer
- Establish, maintain and improve procedures for collaboration and cooperation between acute services, Community services, Primary Care and voluntary organisations as appropriate.
- Proactively challenge any interaction which fails to deliver a quality service to patients.
- Take appropriate action on any matter identified as being detrimental to staff and/or service user care or wellbeing which may inhibit the effective provision of effective care.
- Participate in meetings as a patient and service representative when requested to advocate and support the development of services/staff in respiratory care

	• Support the development of local patient advocacy groups pertinent to specialty • Contribute to case conferencing meetings with supporting consultant and other members of the MDT • Provide and advocate for appropriate assessments, supports and strategies for patients with disease related changes and difficulties. Education and Training Clinical Nurse Specialist Respiratory – COPD Outreach will: • Maintain clinical competence in patient management within respiratory nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice. • Provide the patient, family and/or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their respiratory conditions. • Contribute to the design, development and implementation of education programmes and resources for the patient, family and/or carer in relation to Asthma and/or COPD thus empowering them to manage their own condition independently and autonomously. • Provide mentorship and preceptorship for nursing colleagues as appropriate. • Participate in training programmes for nursing, MDT colleagues and key stakeholders as appropriate. • Address the educational needs of nursing and other professionals by participating in or facilitating training programmes for all members of the MDT. • Create exchange of learning opportunities within the MDT in relation to evidence based respiratory care delivery through journal clubs, conferences etc. • Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in respiratory care • Be responsible for addressing own continuing professional development needs. • Develop and deliver education and training programmes for the wider primary and secondary care MDTs as requested or deemed necessary • Seek advice and assistance with assigned cases which prove to be beyond the scope of their professional competence. Audit and Research Clinical Nurse Specialist Respiratory – COPD Outreach will:
--	---

	• Collect and maintain a record of clinically relevant data aligned to the business intelligence unit (BIU) and National KPI's as directed and advised by the Director of Nursing, the National Clinical Programmes and senior management. • Provide annual reports/updates on patient numbers and activity levels as required for service planning. • Identify, initiate and conduct nursing and collaborative MDT audit and research projects relevant to the area of practice. • Identify, critically analyse, disseminate and integrate best evidence relating to COPD Outreach into practice. • Contribute to nursing research on all aspects of Integrated and COPD care. • Use the outcomes of audit to inform service provision and the need for change • Contribute to service/business planning and budgetary processes through use of audit data and specialist knowledge • Monitor, access, utilise and disseminate current relevant research to advise and ensure the provision of informed evidence based practice. • Contribute to the examination of patients and staff's experiences when engaging with COPD Outreach services. • Assures all patient evaluations are performed and results communicated to the appropriate stakeholders. • Represent the department / team at local, national and international meetings and conferences as appropriate. Consultant Clinical Nurse Specialist Respiratory – COPD Outreach will: • Provide leadership in clinical practice and act as resource in providing specialist knowledge, expertise and care in liaison with the MDT. • Generate and contribute to the development of clinical standards and guidelines and support implementation. • Use specialist knowledge in COPD Care to support and enhance generalist nursing practice. • Develop collaborative working relationships with local respiratory CNSp's/Registered and Candidate Advanced Nurse Practitioner GP/Consultant/MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery. • With the support of the DON, attend integrated care planning meetings as required.
--	--

- Develop and maintain relationships with specialist services in Voluntary Organisations which support patients in the community.
- Represent Integrated services at local, national and international meetings as required
- Promote the role of the service amongst all health care staff in particular in the emergency department and medical admissions unit as appropriate.
- Work with, support, advise and help build up the knowledge and expertise of the other healthcare professionals involved in providing care for patients through regular formal and informal education.
- Liaise with other chronic disease specialist teams (such as diabetes/heart failure) to discuss joint management/assessment needs of patients as necessary.

Job Title and Grade	Clinical Nurse Specialist - Cardiovascular Disease (CNSp. CVD)
Purpose of the Post	The role of the CNSp. CVD was developed to: provide expertise and specialist nursing services to patients with a cardiovascular condition both in the ward, hospital outpatient settings and in primary care. The role of the CNSp CVD will differ according to the needs and configuration of established cardiovascular services at each site. The post holder will act as a liaison between acute cardiology services and integrated cardiology services in the community and other agencies, to deliver effective evidenced based care, using resources efficiently to achieve the best possible outcomes for patients with cardiovascular disease in keeping with agreed models of care and HIQA standards. The post holder will work with colleagues across the acute cardiology services and integrated care services to develop and implement ambulatory care pathways for cardiovascular disease and associated co-morbidities, to improve the transition of patients between primary and secondary care. The post holder will work as part of a MDT and in close liaison with their associated Consultant Cardiologist to deliver coordinated evidence based care for patients. The CNSp CVD will support the implementation of a model of integrated care which is focused on enhancing the management of care for patients between Primary (General Practice) and Secondary (Hospital) Care, thus optimising the patient's quality of life and contributing to an integrated health service. The role supports the implementation of Slaintecare through the provision of community diagnostics and shifting treatment from the acute sector to the community. The primary focus of the post holder will be to ensure that patients with cardiovascular disease receive timely and appropriate care through assessment, planning, implementation and evaluation of care delivery. The person appointed to this post will work in the overall integrated cardiology service. This post is 50% acute based and 50% community based to work with the Integrated Care Consultant Cardiologist to develop integrated care services. Please note a portion of the appointees work will be carried out "offsite". This means that the appointee will travel to the hubs to perform duties related to the role. The CNSp. CVD caseload will focus initially on the following patient groups: • Chronic Cardiovascular Disease • Atrial Fibrillations • Ischaemic Heart Disease The CNSp. CVD plays a vital role in ensuring patients are empowered with skills and knowledge necessary for them to achieve optimal health and wellbeing.
Principal Duties and Responsibilities	Professional Responsibilities <i>The Clinical Nurse Specialist will:</i> • Practice in accordance with relevant legislation and with regard to The Scope of Nursing & Midwifery Practice Framework (Nursing and Midwifery Board of Ireland, 2015) and the Code of Professional Conduct and Ethics for Registered Nurses and Registered Midwives (Nursing and Midwifery Board of Ireland, 2014).

- Adhere to national, regional and local HSE guidelines, policies, protocols and legislation.
- Be aware of ethical policies and procedures which pertain to their area of practice.
- Respect and maintain the privacy, dignity and confidentiality of the patient.
- Maintain a high standard of professional behaviour and be professionally accountable for actions/omissions. Take measures to develop and maintain the competences required for professional practice.
- Adhere to the Nursing & Midwifery values of Care, Compassion and Commitment (DoH, 2016).
- Adhere to appropriate lines of authority within the midwife management structure.

The CNSp. CVD will deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse/Midwife Specialist Posts, 4th ed National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008.

The concepts are:

- Clinical Focus
- Patient/Client Advocate
- Education and Training
- Audit and Research
- Consultant

Clinical Focus

The CNSp. CVD will have a strong patient focus whereby the specialty defines itself as nursing and subscribes to the overall purpose, functions and ethical standards of nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises of the assessment, planning, delivery and evaluation of care to patients, their families and/or carer. Indirect care relates to activities that influence others in their provision of direct care.

Direct Care

- Provide a specialist nursing service for patients with a diagnosis of cardiovascular disease who require support and treatment through the continuum of care.
- Undertake comprehensive patient assessment to include physical, psychological, social and spiritual elements of care using latest evidence based practice in cardiovascular care.
- Use the outcomes of patient assessment to develop and implement plans of care in conjunction with MDT colleagues, the patient, family and/or carer.
- Monitor and evaluate the patient's response to treatment and review the plan of care accordingly in liaison with the MDT and the patient, family and/or carer as appropriate.
- Make alterations in the management of patient's conditions in collaboration with the MDT and the patient in line with agreed pathways and policies, procedures, protocols and guidelines (PPPGs).
- Accept appropriate referrals from colleagues within the MDT.
- Co-ordinate investigations, treatment, therapies and patient follow-up.
- Communicate with patient, family and/or carer as appropriate, to assess the patient's needs and provide relevant support, information, education, advice and counselling as required.
- Work collaboratively with the patient's GP and other MDT colleagues in Primary and Secondary Care, to provide a seamless service delivery to the patients, family and/or carer as appropriate.
- Participate in medication reconciliation taking cognisance of poly-pharmacy and support medical and pharmacy staff with medication reviews and medication management.
- Provide a nurse led cardiology assessment clinic with GP/ Consultant Specialist input regarding drug titration.
- Identify health promotion priorities for the patient, family and/ or carer and support patient self-care in line with best evidence. This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patients' needs.

- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation pathways.

Indirect Care

- Identify and agree appropriate referral pathways for patients with cardiovascular disease.
- Participate in case reviews with MDT colleagues.
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to cardiology care.
- Take a lead role in ensuring the service for patients with cardiovascular disease is in line with best practice guidelines and the Standards for Safer Better Healthcare (HIQA).
- Use a case management approach to patients with complex needs in collaboration with the MDT in Primary and Secondary Care.

Patient/Client Advocate:

- Communicate, negotiate and represent patient's values and decisions in relation to their condition in collaboration with MDT colleagues in both Primary and Secondary Care.
- Develop and support the concept of advocacy particularly in relation to patient participation in decision making thereby enabling informed choice of treatment options.
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer.
- Establish, maintain and improve procedures for collaboration and cooperation between Acute Services, Primary Care and Voluntary Organisations.
- Proactively challenge any interaction which fails to deliver a quality service to patients.
- Comply with HSE Complaints Policy.

Education & Training:

- Maintain clinical competence in patient management within cardiovascular nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice.
- Provide patients and their families and/or carers with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their condition and their optimal quality of life.
- Contribute to the design, development and implementation of education programmes and resources for patients, family and/or carers in relation to chronic cardiovascular disease thus empowering them to self-manage their condition.
- Participate in training programmes for nursing, MDT colleagues and key stakeholders as appropriate
- Create exchange of learning opportunities within the MDT in relation to evidence based cardiovascular care delivery through journal clubs, conferences etc.
- Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in relation to cardiovascular care.

Audit and Research:

- Establish and maintain a register of patients with chronic cardiovascular disease within the CNSp. CVD caseload.
- Collect and maintain a record of clinically relevant data aligned to National KPI's as directed and advised by the DON, the National Heart Programme and senior management.
- Identify, initiate and conduct nursing and MDT audit and research projects relevant to the area of practice.
- Identify, critically analyse, disseminate and integrate best evidence relating to cardiovascular care into practice.
- Evaluate audit results and research findings to identify areas for quality improvement in collaboration with nursing management and MDT members (Primary and Secondary Care).
- Contribute to nursing research on all aspects of cardiovascular disease care.

Consultant:

- Provide leadership in clinical practice and act as a resource and role model for specialist practice.
- Generate and contribute to the development of clinical standards and guidelines and support implementation.
- Use specialist knowledge to support and enhance generalist nursing/ midwifery practice.
- Develop collaborative working relationships with local cardiovascular CNS's/ Registered Advanced Nurse Practitioners/ MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery.
- With the support of the DON, attend integrated care planning meetings as required.
- Develop and maintain relationships with specialist services in voluntary organisations which support patients in the community.
- Liaise with other health service providers in the development and on-going delivery of appropriate models of care.
- Network with other CNSp. CVD's and related professional associations.

Health & Safety

These duties must be performed in accordance with local organisational & the HSE health and safety policies. In carrying out these duties the employee must ensure that effective safety procedures are in place to comply with the Health, Safety and Welfare at Work Act (2005). Staff must carry out their duties in a safe and responsible manner in line with the local policy documents and as set out in the local safety statement, which must be read and understood.

Quality, Risk and Safety Responsibilities

It is the responsibility of all staff to:

- Participate and cooperate with legislative and regulatory requirements with regard to quality, risk and safety.
- Participate and cooperate with local quality, risk and safety initiatives as required.
- Participate and cooperate with internal and external evaluations of the organisation's structures, services and processes as required, including but not limited to, The National Hygiene Audit, National Decontamination Audit, Health and Safety Audits and other audits specified by the HSE or other regulatory authorities
- To initiate, support and implement quality improvement initiatives in their area which are in keeping with local organisational quality, risk and safety requirements.
- Contribute to the development of PPPGs and safe professional practice and adhere to relevant legislation, regulations and standards.
- Ensure completion of incident/near miss forms and clinical risk reporting.
- Adhere to department policies in relation to the care and safety of any equipment supplied and used to carry out the responsibilities of the role of CNSp. CVD.

Specific Responsibility for Best Practice in Hygiene

Hygiene is defined as: "The practice that serves to keep people and environments clean and prevent infection. It involves the study of preserving one's health, preventing the spread of disease, and recognising, evaluating and controlling health hazards. In the healthcare setting it incorporates the following key areas: environment and facilities, hand hygiene, catering, management of laundry, waste and sharps, and equipment" (HIQA, 2008; P2).

It is the responsibility of all staff to ensure compliance with local organisational hygiene standards, guidelines and practices.

Management/Administration

- Provide an efficient, effective and high quality service, respecting the needs of each patient, family and/or carer.
- Effectively manage time and caseload in order to meet changing and developing service needs.
- Continually monitor the service to ensure it reflects current needs.
- Implement and manage identified changes.
- Ensure that confidentiality in relation to patient records is maintained.

- Represent the specialist service at local, national and international fora as required.
- Maintain accurate and contemporaneous records and data on all matters pertaining to the planning, management, delivery and evaluation of care and ensure that this service is in line with HSE requirements.
- Contribute to the service planning process as appropriate and as directed by A/DON
- Have a working knowledge of the Health Information and Quality Authority (HIQA) Standards as they apply to the role for example, Standards for Healthcare, National Standards for the Prevention and Control of Healthcare Associated Infections, Hygiene Standards etc. and comply with associated HSE protocols for implementing and maintaining these standards as appropriate to the role.
- To support, promote and actively participate in sustainable energy, water and waste initiatives to create a more sustainable, low carbon and efficient health service.

The above Job Specification is not intended to be a comprehensive list of all duties involved and consequently, the post holder may be required to perform other duties as appropriate to the post which may be assigned to him/ her from time to time and to contribute to the development of the post while in office.

Clinical Nurse Specialist (Diabetes – Integrated Care) Job Specification & Terms and Conditions

Job Title and Grade	Clinical Nurse Specialist (Diabetes – Integrated Care) (Grade Code: 2632)
Purpose of the Post	The purpose of this Clinical Nurse Specialist (Diabetes – Integrated Care) post is to: Deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse Specialist Posts, 4th edition, National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The CNS will work as part of a multidisciplinary team who will be responsible for implementing the delivery of the Model of Integrated Care for Patients Type 2 Diabetes (2018) within the community healthcare network and community healthcare organisation. In line with the Model of Care, 80% of the CNS role will involve working with General Practitioners (GP's) and MDT's in Primary Care and 20% of CNS role will involve working in Secondary Care. There will be a strong focus on service integration and team-working. This post will also involve the core elements of the CNS post to include clinical audit and research.
Principal Duties and Responsibilities	The post holder's practice is based on the five core concepts of Clinical Nurse Specialist (Diabetes – Integrated Care) role as defined by the NCNM 4th edition (2008) in order to fulfil the role. The concepts are: • Clinical Focus • Patient/Client Advocate • Education and Training • Audit and Research • Consultant Clinical Focus Clinical Nurse Specialist (Diabetes – Integrated Care) will have a strong patient focus whereby the specialty defines itself as Nursing and subscribes to the overall purpose, functions and ethical standards of Nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/or carer. Indirect care relates to activities that influence and support the provision of direct care. Direct Care Clinical Nurse Specialist (Diabetes – Integrated Care) will: • Provide a specialist nursing service for patients with a diagnosis of Diabetes who require support and treatment through the continuum of care.

- Undertake comprehensive patient assessment to include physical, psychological, social and spiritual elements of care using best evidence based practice in Diabetes care.
- Use the outcomes of patient assessment to develop and implement plans of care/case management in conjunction with the multi-disciplinary team (MDT) and the patient, family and/or carer as appropriate.
- Monitor and evaluate the patient's response to treatment and amend the plan of care accordingly in conjunction with the MDT and patient, family and/or carer as appropriate.
- Make alterations in the management of patient's condition in collaboration with the MDT and the patient in line with agreed pathways and policies, procedures, protocols and guidelines (PPPG's).
- Accept appropriate referrals from MDT colleagues.
- Co-ordinate investigations, treatment therapies and patient follow-up.
- Communicate with patients, family and /or carer as appropriate, to assess patient's needs and provide relevant support, information, education, advice and counselling as required.
- Where appropriate work collaboratively with MDT colleagues across Primary and Secondary Care to provide a seamless service delivery to the patient, family and/or carer as appropriate.
- Participate in medication reconciliation taking cognisance of poly-pharmacy and support medical and pharmacy staff with medication reviews and medication management.
- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation pathways.
- Identify health promotion priorities for the patient, family and/or carer and support patient self-care in line with best evidence. This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patient's needs.
- Support the initiation and continuing care of patients with Type 2 Diabetes who have been commenced on insulin/injectable therapy.
- Fast track emergency referrals e.g. patients with urinary ketones or foot ulcerations to the appropriate member of the MDT for review and collaborative management planning.

Indirect Care

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Identify and agree appropriate referral pathways for patients with Diabetes.
- Participate in case review with MDT colleagues.
- Use a case management approach to patients with complex needs in collaboration with MDT in both Primary and Secondary Care as appropriate.
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to Diabetes care.
- Take a lead role in ensuring the service for patients with Diabetes is in line with best practice guidelines and the Safer Better Healthcare Standards (HIQA, 2012).

Patient/Client Advocate

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Communicate, negotiate and represent patient's family and/or carer values and decisions in relation to their condition in collaboration with MDT colleagues in both Primary and Secondary Care as appropriate.
- Develop and support the concept of advocacy, particularly in relation to patient participation in decision making, thereby enabling informed choice of treatment options
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer.
- Establish, maintain and improve procedures for collaboration and cooperation between Acute Services, Primary Care and Voluntary Organisations as appropriate.
- Proactively challenge any interaction which fails to deliver a quality service to patients.

Education & Training:

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Maintain clinical competence in patient management within Diabetes Nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice.
- Provide the patient, family and/or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their Diabetes.
- Contribute to the design, development and implementation of education programmes and resources for the patient, family and/or carer in relation to Diabetes thus empowering them to self-manage their condition.
- Provide mentorship and preceptorship for nursing colleagues as appropriate.
- Participate in training programmes for Nursing, MDT colleagues and key stakeholders as appropriate.
- Create exchange of learning opportunities within the MDT in relation to evidence based Diabetes care delivery through journal clubs, conferences, etc.
- Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in Diabetes care.
- Be responsible for addressing own continuing professional development needs

Audit & Research:

Clinical Nurse Specialist (Diabetes – Integrated Care) will:

- Establish and maintain a register of patients with Diabetes within Clinical Nurse Specialist Caseload.
- Maintain a record of clinically relevant data aligned to National Key Performance Indicators (KPI's) as directed and advised by the, DPHN, National Clinical Programme and senior management.
- Identify, initiate and conduct Nursing and MDT audit and research projects relevant to the area of practice.
- Identify, critically analyse, disseminate and integrate best evidence relating to Diabetes care into practice.

- Contribute to nursing research on all aspects of Diabetes care.

Podiatrist, Clinical Specialist (Diabetes)
Job Specification & Terms and Conditions

Job Title and Grade	Podiatrist, Clinical Specialist Diabetes) (Grade Code: 3654)
Purpose of the Post	As a Podiatrist, Clinical Specialist in Diabetes the post holder will have the vision and drive to bring professionals in the Regional referral area from different areas of healthcare together to provide optimal diagnoses and treatment and to improve outcomes for those with diabetes foot complications. The Podiatrist, Clinical Specialist will be responsible for leading the development and provision of a high quality service to diabetes patients at risk of DFU and those patients who are in-remission from DFU. They will work closely with Senior Podiatrist (Diabetes) and the Staff Grade Podiatrist (Diabetes) as well as Foot Protection Team. It will be necessary to connect and work closely with the multidisciplinary foot team podiatrist to promote integrated working within the podiatry profession; to enable integrated working between the foot protection team and multidisciplinary foot team, and, to help coordinate the management of the diabetic foot in the local region. This will also facilitate and assist with CPD and learning. In this role the Clinical Specialist Podiatrist, will be responsible for the co-ordination of strategic planning and development of specialist diabetes foot services in the community setting, participation in clinical research, and collaboration in multi-centre studies on the various aspects of managing and treating the foot in diabetes. To work as part of multi-disciplinary teams in providing a quality, person-centred, evidence-based podiatry service to meet the needs of service users in the community setting.
Principal Duties and Responsibilities	<i>The Podiatrist, Clinical Specialist (Diabetes) will:</i> Clinical Practice Act as a recognised expert podiatric resource for specialised clinical advice to patients, peers and other medical staff including GPs.

- Ensure professional standards are maintained in accordance with The College of Podiatry (UK) Guidelines on Minimum Standards of Clinical Practice for Podiatry.
- Responsibility for own clinical and administrative practices in line with HSE policies procedures and guidelines as well as national models of care and national podiatric best practice.
- Treat and manage a specialist clinical caseload within your regional area for those with diabetes foot disease.
- Undertake specialist podiatry treatments and interventions as appropriate to your grade, skills and competencies in the community setting.
- Provide standardised high-quality diabetes foot management to patients at risk of developing foot complications and those in remission from DFU. There may be requirement to provide continued care to those patients with active foot disease, in line with the care plan developed by the multi-disciplinary foot team, providing care closer to the patient's home in the community.
- Adhere to national and international guidelines on diabetes foot management.
- Develop specialised, tailored management plans following an in-depth accurate assessment and diagnosis of the patient, using highly advanced and specialist skills in patient management.
- Ensure timely referral to other services in the foot protection team or other as required.
- Identify the need for change in own clinical practice, and that of colleagues, within the context of changing demographics, economic and legislative needs.
- Provide clinical leadership that will influence and assist in the development of quality improvements in diabetes foot management.

Quality, Safety and Risk Management

- Work in a safe manner with due care and attention to the safety of self and others
- Implement internationally developed standards in care for the diabetes foot and avail of evidence based interventions to achieve these standards as agreed locally.
- Develop and review appropriate clinical care pathways for patients with diabetes and facilitate these with other specialists within the team and wider networks.
- Ensure that every patient is to be treated as an individual and provided with a high quality service in terms of dignity courtesy, kindness, interest and efficiency.
- Lead and collaborate on the development and implementation of local and national standards of practice, clinical protocols and clinical pathways for diabetes foot management.

- Actively participate in relevant Special Interest Groups including local governance and implementation groups on a regular basis as agreed with Podiatry manager.
- Support and stimulate and partake in research in your specialist area
- Participate in local and national audit, benchmarking and quality assurance measures in own specialist area and facilitate these in the National Diabetes Programme.
- Participate in the development, co-ordination and implementation of strategy relevant to the National Clinical Programme for Diabetes or other HSE developed programmes for the diabetic foot
- In conjunction with the National Diabetes Working Group and the Podiatry Manager, plan, co-ordinate and facilitate research and development activities within diabetes foot management.
- Provide clinical and non-clinical risk management, set standards and measure clinical effectiveness in own specialist area.

Research, Audit, Evaluation and Development.

- Implement research and audit tools to improve clinical practice and patient outcomes
- Use work items provided by the Health Service Executive in accordance with training and instructions, including personal protective equipment.
- Develop and review policies, procedures, protocols and guidelines for managing diabetes patient care within the community setting.
- Plan, develop and review innovative service developments across own specialist services within the team in conjunction with the Podiatry Manager and keeping National Clinical Programme informed and up-to-date on developments.
- Have a working knowledge of the Health Information and Quality Authority (HIQA) Standards as they apply to the role and your working environment for example, Standards for Healthcare, National Standards for the Prevention and Control of Healthcare Associated Infections, Hygiene Standards etc and comply with associated HSE protocols for implementing and maintaining these standards as appropriate to the role.
- To support, promote and actively participate in sustainable energy, water and waste initiatives to create a more sustainable, low carbon and efficient health service.

Work Practice

- Provide a specialist podiatry service for those at risk of or in remission from DFU, and as required for those with Active foot disease within community setting.
- Liaise with other members of the foot protection team, patients, carers and others, on matters relating to the management and treatment of diabetes patients at risk of or in remission from DFU.

- Provide clinical support to the foot protection team members and networks by maintaining an effective range of communication skills to instruct, inform, and negotiate in order to achieve active patient participation, a cohesive approach to treatment and successful case management.
- Be responsible for collating and monitoring data relating to the specialist area and to prepare activity reports on this area for the Podiatry Manager and the HSE.
- Participate in collaborative interdisciplinary research.
- Inform the Podiatry Manager of changes or trends within service provision to diabetes patients and provide recommendations on implementing changes.
- Implement agreed policies, procedures and safe professional practice by adhering to relevant legislation, regulations and standards.
- Participate in the business planning aspect of the diabetes specialist team and contribute to the business planning process for the community Podiatry Department in conjunction with the Podiatry Manager.
- Participating in business planning aspect of diabetes foot protection service in relation to biomechanical services, aids and appliances and orthoses.
- Partake in the allocation of work amongst staff within the clinical area so as to ensure a high standard of service to patients and a good staff morale.

Education and Development

- Provide case supervision to less experienced Podiatrists in own specialist clinical area.
- Remain up to date with all HSE service agreed mandatory training, complete HSE induction training.
- Maintain a personal development plan with the relevant podiatry clinical grade and Podiatry management
- Be committed to personal development and acquisition of further skills and knowledge in own specialist clinical area in order to maintain and further develop a high level of clinical expertise.
- Plan, develop and provide specialist training/teaching for podiatry staff within the HSE to facilitate others in the setting up of new and the further development of clinical services for diabetes foot management.
- In collaboration with all members of the FPT, the Clinical Specialist Podiatrist (Diabetes) will lead on providing diabetic foot education to HSE community healthcare workers. They will also work together with multidisciplinary foot team podiatrists to develop and deliver diabetic foot education to General Practitioners and Practice Nurses.
- Once enacted, register and maintain professional registration with the Podiatrists Registration Board in CORU.

- Facilitate clinical practice placements for podiatry undergraduate students and other health care professionals as appropriate agreed with the podiatry manager..
- Supervise, mentor and provide peer support of less experienced members of staff within the team and advise the Podiatry Manager of needs required.
- Liaise with relevant outside agencies such as universities and professional bodies in order to promote the profession.

The above Job Specification is not intended to be a comprehensive list of all duties involved and consequently, the post holder may be required to perform other duties as appropriate to the post which may be assigned to him/her from time to time and to contribute to the development of the post while in office.

--	---

Job Title, Grade, Grade Code	Clinical Nurse Specialist (CNSp), Respiratory – Integrated Care <i>Grade Code: 2632</i>
Purpose of the Post	The role of the CNSp will differ according to the needs and configuration of established respiratory services at each site. The purpose of this Clinical Nurse Specialist, Respiratory Integrated Care post is to: provide expertise and specialist nursing services to patients with a respiratory condition both in the hospital outpatient settings and in primary care. The post holder will liaise between acute respiratory services and integrated respiratory services in the community along with other agencies to deliver effective evidenced based care. They will use resources efficiently to achieve the best possible outcomes in keeping with the NCP Programme model of care and HIQA standards. The person appointed to this post will work in newly formed Respiratory Integrated Care services. The post holder will work as part of a multidisciplinary team delivering coordinated evidence based care for patients in primary care whilst liaising closely with secondary care. The CNS RIC will deliver nurse-led clinics to provide support to patients and their GPs in creating management plans, assessing inhaler treatments, assisting with diagnosis development and will provide education to patients and staff. This post is 80% working with GP’s in Primary Care, and 20% of CNSp role will involve working with Secondary Care respiratory teams. In order to ensure continuity of service to patients the CNSp may be required to rotate/cover other parts of the integrated respiratory service such as Pulmonary Rehabilitation and Outreach. This will also promote service integration and enhance skillset development. It will be dependent on identified service needs at each site. If deemed appropriate, site rotation should occur within the first 3-6 months of taking up the post. The Clinical Nurse Specialist (RIC) caseload will focus initially on the following patient groups. • COPD • Asthma
Principle Duties and Responsibilities	The CNSp will deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse/Midwife Specialist Post, 4 th ed. National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The concepts are:

- Clinical Focus
- Patient/Client Advocate
- Education and Training
- Audit and Research
- Consultant

Whereby the CNSp is required to rotate into Outreach or Pulmonary Rehabilitation, some aspects of their primary role under these headings may alter to include additional duties such as home visits, delivering pulmonary rehabilitation, oxygen assessments and nurse led spirometry clinics.

Clinical Focus

The CNSp. will have a strong patient focus whereby the specialty defines itself as nursing and subscribes to the overall purpose, functions and ethical standards of nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/or carer. Indirect care relates to activities that influence others in their provision of direct care. The CNSp will work in conjunction with other team members in co-ordinating and developing the Integrated Care service to meet the needs of the population it serves in line with the objectives of the organisation.

Direct Care

The Clinical Nurse Specialist Respiratory-Integrated Care will:

- Provide a specialist nursing service for patients with COPD/Asthma that incorporates evidence based knowledge, investigative and analytical skills and specialist assessment techniques to triage comprehensibly assess and manage a range of complex presentations.
- Use the outcomes of patient assessment to develop and implement plans of care/case management in conjunction with the GP/Consultant/MDT and the patient, family and/or carer as appropriate.
- Monitor and evaluate the patient's response to treatment and amend the plan of care accordingly in conjunction with the GP/Consultant/MDT and patient, family and/or carer as appropriate.
- Make alterations in the management of patient's condition in collaboration with the GP/Consultant/MDT and the patient in line with agreed pathways, policies, protocols and guidelines (PPPG's).
- Manage nurse led asthma and COPD Clinics with GP/Specialist input

- Evaluate clinical problems using objective measurement tools e.g. Spirometry, Arterial Blood Gases (ABG) in conjunction with other team members, co-ordinate investigations, therapies and patient follow-up in secondary or primary care as appropriate.
- Provide spirometry service to confirm differential diagnosis and staging of disease where appropriate.
- Use a case management approach to patients with complex needs
- If a Registered Nurse Prescriber (RNP) the nurse must work within the scope of their practice and adhere to the regulations set down by NMBI pertaining to this role and, local policy requirements.
- Use agreed direct pathway for patients who may present/become clinically unwell at time of attending/engaging with the service.
- In collaboration with the GP and Consultant, co-ordinate investigations, treatment therapies and patient follow-up and referrals as required.
- Communicate with patients, family and /or carer as appropriate, to assess patient's needs and provide relevant support, information, education, advice and counselling as required.
- Work collaboratively with MDT colleagues across Primary and Secondary Care to provide a seamless service delivery to the patient, family and/or carer as appropriate.
- Participate in medication reconciliation taking cognisance of poly-pharmacy and support medical and pharmacy staff with medication reviews and medication management.
- Provide specialist interventions including, sputum clearance, and relaxation, breathing control, exercise and breathlessness management.
- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation/de-escalation plans.
- Identify health promotion priorities for the patient, family and/or carer and support patient self-care in line with best evidence and using the principles laid out by MECC (Make Every Contact Count). This will include the provision educational and health promotion material which is comprehensive, easy to understand and meets patients' needs
- Assess patient understanding of treatment proposals, gain informed consent and have the capacity to work within a legal framework with patients who lack capacity to consent to treatment.

- Communicate with patients, families and friends, assess needs and provide relevant support, information, education, advice and counselling when and where necessary.

Indirect Care

- Identify and agree appropriate referral pathways for patients with Asthma or COPD, or both COPD and Asthma
- Participate in case review with MDT colleagues
- Use a case management approach to patients with complex needs in collaboration with MDT in both Primary and Secondary Care
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to Integrated Care. Contribute to the development and implementation of information sharing protocols, audit systems, referral pathways, individual care plans and shared care arrangements through regular collaboration/meetings with respiratory nurses locally and nationally.
- Manage clinical risk within own clinical caseload, to have up to date knowledge of indications, contraindications and precautions for any treatment skills and techniques selected and applied throughout an individual course of treatment.
- Arrange referrals to other appropriate specialist services as deemed necessary
- Refer for further clinical psychological evaluation if felt necessary or requested by the patient and/or their family.
- Effectively manage time and caseload in order to meet the needs of an evolving service
- Work closely with colleagues across services in order to provide a seamless integrated service for the patient
- Identify and utilise professional and voluntary resources and facilities at local and national level by direct and indirect referral
- Refer to relevant services to assist with procurement of domiciliary equipment and respiratory therapies that may be required by the patient such as oxygen
- Participate in the Departmental Clinical Governance processes, working in partnership with the Head of Departments, CNM3/ADPHN, and Clinical Governance lead and local respiratory governance groups.
- Ensure that effective clinical governance procedures are maintained and evolve according to defined needs and demands in Respiratory care.
- Maintain professional standards including patient and data confidentiality in line with HSE policy

- Develop and implement strategies as part of the Integrated Care team for delivering effective care within a changing environment using IT and alternative delivery strategies as needed.

Patient/Client Advocate

Clinical Nurse Specialist Respiratory – Integrated Care will:

- Communicate, negotiate and represent patient's family and /or carer values and decisions in relation to their condition in collaboration with GP/Consultant/MDT colleagues in both Primary and Secondary Care as appropriate
- Develop and support the concept of advocacy, particularly in relation to patient participation in decision making, thereby enabling informed choice of treatment options
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer
- Establish, maintain and improve procedures for collaboration and cooperation between Acute Services, Primary Care and Voluntary Organisations
- Proactively challenge any interaction which fails to deliver a quality service to patients.
- Participate in meetings as a patient and service representative when requested to advocate and support the development of services/staff in respiratory care
- Support the development of local patient advocacy groups pertinent to specialty
- Contribute to case conferencing meetings with supporting consultant and other members of the MDT
- Provide and advocate for appropriate assessments, supports and strategies for patients with disease related changes and difficulties.

Education & Training:

Clinical Nurse Specialist Respiratory – Integrated Care will:

- Maintain clinical competence in patient management within respiratory nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice.
- Provide the patient, family and/or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their respiratory conditions.
- Contribute to the design, development and implementation of education programmes and resources for the patient, family and/or carer in relation to Asthma and/or COPD thus empowering them to manage their own condition independently and autonomously.

- Provide mentorship and preceptorship for nursing colleagues as appropriate.
- Participate in training programmes for nursing, MDT colleagues and key stakeholders as appropriate.
- Address the educational needs of nursing and other professionals by participating in or facilitating training programmes for all members of the MDT.
- Create exchange of learning opportunities within the MDT in relation to evidence based respiratory care delivery through journal clubs, conferences etc.
- Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in respiratory care
- Be responsible for addressing own continuing professional development needs.
- Develop and deliver education and training programmes for the wider primary and secondary care MDTs as requested or deemed necessary
- Seek advice and assistance with assigned cases which prove to be beyond the scope of their professional competence.

Audit & Research:

Clinical Nurse Specialist Respiratory – Integrated Care will:

- Collect and maintain a record of clinically relevant data aligned to the business intelligence unit (BIU) and National KPI's as directed and advised by the PR coordinator, the National Clinical Programmes and senior management.
- Provide annual reports/updates on patient numbers and activity levels as required for service planning.
- Identify, initiate and conduct nursing and collaborative MDT audit and research projects relevant to the area of practice.
- Identify, critically analyse, disseminate and integrate best evidence relating to respiratory care into practice.
- Contribute to nursing research on all aspects of Asthma and COPD nursing care
- Use the outcomes of audit to inform service provision and the need for change
- Contribute to service planning and budgetary processes through use of audit data and specialist knowledge.
- Monitor, access, utilise and disseminate current relevant research to advise and ensure the provision of informed evidence based practice.

- Contribute to the examination of patients and staffs experiences when engaging with Pulmonary Rehabilitation and Integrated services
- Assures all patient evaluations are performed and results communicated to the appropriate stakeholders.
- Represent the department / team at local, national and international meetings and conferences as appropriate.

Consultant:

Clinical Nurse Specialist Respiratory – Integrated Care will:

- Provide leadership in clinical practice and act as a resource and role model to primary care staff in the area of asthma/COPD/respiratory practice.
- Generate and contribute to the development of clinical standards and guidelines and support implementation.
- Use specialist knowledge in Respiratory Care to support and enhance generalist nursing/midwifery practice.
- Develop collaborative working relationships with local respiratory CNSp's/Registered and Candidate Advanced Nurse Practitioner/ GP/ Consultant/ MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery.
- With the support of the DPHN, attend integrated care planning meetings as required.
- Develop and maintain relationships with specialist services in Voluntary Organisations which support patients in the community.
- Liaise with other health service providers in the development and on-going delivery of the National Clinical Programme model of care.
- Network with other Clinical Nurse Specialist's in respiratory care and in related professional associations.
- Support the development of local disease specific patient support groups by acting as a specialist resource and point of contact for educational elements as needed.
- Liaise with other chronic disease specialist teams (such as diabetes/heart failure) to discuss joint management/assessment needs of patients as necessary.

Pulmonary Rehabilitation Coordinator
Job Specification, Terms & Conditions

Job Title & Grade	Clinical Specialist Physiotherapist Pulmonary Rehabilitation Coordinator (<i>Grade Code 3707</i>)
Purpose of the Post	As outlined above, the need to reform the healthcare services in Ireland in order to provide a more sustainable, integrated and patient-centred approach has come to the fore in recent health policies and strategies. Integrated care requires health and social care services to work together across different levels and sites in order to provide end-to-end care that meets patient need. The Pulmonary rehabilitation coordinator will offer dynamic leadership to promote and develop a high quality evidenced based pulmonary rehabilitation service championing innovation to improve and support service delivery. They will act as the representative clinical lead at local and national strategic development meetings disseminating information and acting on initiatives and improvements within the resources available. Clinical Nurse Specialist, Respiratory - Pulmonary Rehabilitation
Job Specification,

Job Title & Grade	Clinical Nurse Specialist (CNSp), Respiratory - Pulmonary Rehabilitation (PR)
Purpose of the Post	The role of the CNSp will differ according to the needs and configuration of established respiratory services at each site. The successful candidate will work within the Community PR service and integrate with other ambulatory care services between the hospital and community. They will work with colleagues across these services to develop and implement ambulatory care pathways to manage patients with respiratory disease and associated co-morbidities, within the community setting. The post holder will work as part of a multidisciplinary team delivering coordinated evidence based care for patients. Pulmonary Rehabilitation (PR) has been proven to increase exercise capacity and health status in people with respiratory disease who have significant self-reported exercise limitation. It can improve exercise capacity in people with a variety of respiratory diseases that affect activities of daily living. The role of the CNSp in PR is to be responsible for the safe and competent assessment and supervision of patients with respiratory disease undertaking PR programmes. The CNSp is required to provide a specialist nursing resource within the governance structure created for the programme. They will provide physical, psychological and emotional support to PR participants and their families as needed throughout the programme. They will provide physical, psychological and emotional support to an agreed caseload of patients participating in the Pulmonary Rehabilitation programme. The post holder will have a close working relationship with the PR coordinator and their physiotherapy team members. They will also liaise closely between the PR team and other integrated respiratory care teams in the community and secondary care to deliver effective evidenced based care, using resources efficiently to achieve the best possible outcomes in keeping with the National Clinical Programmes-Respiratory guidance documents In order to ensure continuity of service to patients the CNSp may be required to rotate/cover other parts of the integrated respiratory service such as Respiratory Integrated Care and Outreach along with their senior physiotherapy colleagues. This will also promote service integration and enhance skillset development. It will be dependent on identified service needs at each site. If deemed appropriate, site

	rotation should occur within the first 3-6 months of taking up the post. This post will be 100% community based
Principal Duties and Responsibilities	The CNSp will deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse/Midwife Specialist Post, 4th ed. National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The concepts are: • Clinical Focus • Patient/Client Advocate • Education and Training • Audit and Research • Consultant Whereby the CNSp is required to rotate into Outreach or Respiratory Integrated Care, some aspects of their primary role under these headings may alter to include additional duties such as home/hospital visits, oxygen assessment and nurse led spirometry clinics. Clinical Focus The CNSp will have a strong patient focus whereby the specialty defines itself as nursing and subscribes to the overall purpose, functions and ethical standards of nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/or carer. Indirect care relates to activities that influence others in their provision of direct care. The CNSp will work in conjunction with the Pulmonary rehabilitation Coordinator and other team members in co-ordinating and developing the PR service to meet the needs of the population it serves in line with the objectives of the organisation. Direct Care Clinical Nurse Specialist (CNSp), Respiratory - Pulmonary Rehabilitation will: • Provide a specialist nursing service for patients with respiratory disease that incorporates evidence based knowledge, investigative and analytical skills and specialist assessment techniques to triage comprehensibly assess and manage a range of complex presentations. • Use the outcomes of patient assessment to develop and implement plans of care in conjunction with MDT colleagues, the patient and /or carer providing and receiving complex sensitive information, taking into account physical,

psychological and social care needs when taking a clinical history and assessing patient's suitability for PR.

- Make alterations in the management of patient's condition in collaboration with the MDT and the patient in line with agreed pathways and policies, procedures, protocols and guidelines (PPPG's).
- Organise and implement delivery of a comprehensive PR programme of education and exercise that is of a high standard with MDT colleagues, that is safe and that meets the needs of all patients supported by other team members and the PR coordinator.
- Be able to offer appropriate advice to patients following completion of the programme to help them achieve and maintain fitness and healthy living in the long term.
- Assist physiotherapy colleagues with an exercise prescription for each patient. Instructs patients on the basic components of the exercise including warm-up, aerobic exercise and cool-down. Instructs patients in self-monitoring techniques. Provide specialist nursing service to deliver a quality PR programme to respiratory patients.
- Manage nurse led Respiratory or Pulmonary Assessment clinics with MDT input
- Provide spirometry service to confirm differential diagnosis and staging of disease if not previously undertaken.
- Review and assess patients' inhaler treatments make adjustments/recommendations on treatment plans and facilitate onward referral as appropriate.
- Monitor and evaluate the patient's response to treatment and amend the plan of care accordingly in conjunction with the GP/Consultant/MDT and patient, family and/or carer as appropriate.
- If a Registered Nurse Prescriber (RNP) the nurse must work within the scope of their practice and adhere to the regulations set down by NMBI pertaining to this role and, local policy requirements.
- Participate in medication reconciliation taking cognisance of poly-pharmacy and support medical and pharmacy staff with medication reviews and medication management.
- Provide specialist interventions including breathing control and breathlessness management
- Plan and implement the education component of the PR class with MDT colleagues
- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide

patients with appropriate self-management strategies and escalation/de-escalation plans.

- Use agreed direct pathway for patients who may present/become clinically unwell at time of attending/engaging with the service
- Provides background on reason for any readmissions and potential causes and/or suggestions for prevention of future readmissions.
- Identify health promotion priorities for the patient, family and/or carer and support patient self-care in line with best evidence and utilising principles laid out by MECC (Make Every Contact Count). This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patients' needs.
- Assess patient understanding of treatment proposals, gain informed consent and have the capacity to work within a legal framework with patients who lack capacity to consent to treatment.
- Communicate with patients, families and friends, assess needs and provide relevant support, information, education, advice and counselling when and where necessary.

Indirect Care

- Manage, develop and evaluate Pulmonary Rehabilitation pathways with the Pulmonary Rehabilitation coordinator, GPs, Consultant and integrated teams.
- Participate in case reviews with MDT colleagues as required.
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to Integrated Care and PR. Contribute to the development and implementation of information sharing protocols, audit systems, referral pathways, individual care plans and shared care arrangements through regular collaboration/meetings with respiratory nurses locally and nationally.
- Manage clinical risk within own clinical caseload, to have up to date knowledge of indications, contraindications and precautions for any treatment skills and techniques selected and applied throughout an individual course of treatment.
- Arrange referrals to other appropriate specialist services as deemed necessary
- Refer for further clinical psychological evaluation if felt necessary or requested by the patient and/or their family.
- Effectively manage time and caseload in order to meet the needs of an evolving service
- Work closely with colleagues across services in order to provide a seamless integrated service for the patient

- Identify and utilise professional and voluntary resources and facilities at local and national level by direct and indirect referral
- Discuss and triage PR referrals with team members.
- Refer to relevant services to assist with procurement of domiciliary equipment and respiratory therapies that may be required by the patient such as oxygen
- Participate in the Departmental Clinical Governance processes, working in partnership with the Head of Departments, CNM3/ADPHN, and Clinical Governance lead and local respiratory governance groups.
- Ensure that effective clinical governance procedures are maintained and evolve according to defined needs and demands in Respiratory care.
- Maintain professional standards including patient and data confidentiality in line with HSE policy
- Develop and implement strategies as part of the Integrated Care team for delivering effective PR within a changing environment using IT and alternative delivery strategies as needed.
- Assist with the waiting list ensuring appropriate demand and capacity management in liaison with PR co-ordinator and physiotherapy colleagues.
- Review the effectiveness of PR through monitoring and interpretation of clinical outcome measures

Patient/Client Advocate

Clinical Nurse Specialist, Respiratory - Pulmonary Rehabilitation will:

- Communicate, negotiate and represent patient's family and/or carer values and decisions in relation to their condition in collaboration with MDT colleagues in both Primary and Secondary Care as appropriate
- Develop and support the concept of advocacy particularly in relation to patients' participation in decision making thereby enabling informed choice of treatment options.
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer
- Establish, maintain and improve procedures for collaboration and cooperation between acute services, Community services, Primary Care and voluntary organisations as appropriate.
- Proactively challenge any interaction which fails to deliver a quality service to patients.

- Take appropriate action on any matter identified as being detrimental to staff and/or service user care or wellbeing which may inhibit the effective provision of effective care.
- Participate in meetings as a patient and service representative when requested to advocate and support the development of services/staff in respiratory care
- Support the development of local patient advocacy groups pertinent to specialty
- Contribute to case conferencing meetings with supporting consultant and other members of the MDT
- Provide and advocate for appropriate assessments, supports and strategies for patients with disease related changes and difficulties.

Education & Training

Clinical Nurse Specialist, Respiratory - Pulmonary Rehabilitation will:

- Maintain clinical competence in patient management within respiratory nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice.
- Provide the patient, family and/or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their respiratory conditions.
- Contribute to the design, development and implementation of education programmes and resources for the patient, family and/or carer in relation to Asthma and/or COPD thus empowering them to manage their own condition independently and autonomously.
- Provide mentorship and preceptorship for nursing colleagues as appropriate.
- Participate in training programmes for nursing, MDT colleagues and key stakeholders as appropriate.
- Address the educational needs of nursing and other professionals by participating in or facilitating training programmes for all members of the MDT.
- Create exchange of learning opportunities within the MDT in relation to evidence based respiratory care delivery through journal clubs, conferences etc.
- Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in respiratory care
- Be responsible for addressing own continuing professional development needs.

	• Develop and deliver education and training programmes for the wider primary and secondary care MDTs as requested or deemed necessary • Seek advice and assistance with assigned cases which prove to be beyond the scope of their professional competence. Audit & Research Clinical Nurse Specialist, Respiratory - Pulmonary Rehabilitation will assist the PR coordinator with: • Establishing and maintain a register of patients within the PR patient group • Collecting and maintain a record of clinically relevant data aligned to the business intelligence unit (BIU) and National KPI's as directed and advised by the PR coordinator, the National Clinical Programmes and senior management. • Providing annual reports/updates on patient numbers and activity levels as required for service planning. • Identifying, initiate and conduct nursing and collaborative MDT audit and research projects relevant to the area of practice. • Identifying, critically analyse, disseminate and integrate best evidence relating to respiratory care into practice. • Contributing to nursing research on all aspects of PR and respiratory care. • Using the outcomes of audit to inform service provision and the need for change • Contributing to service/business planning and budgetary processes through use of audit data and specialist knowledge • Contributing to the examination of patients and staff's experiences when engaging with PR and Integrated services. • Assuring all patient evaluations are performed and results communicated to the appropriate stakeholders. • Monitoring, access, utilise and disseminate current relevant research to advise and ensure the provision of informed evidence based practice. • Representing the department / team at local, national and international meetings and conferences as appropriate. Clinical Nurse Specialist, Respiratory - Pulmonary Rehabilitation will:
--	---

	• Provide leadership in clinical practice and act as a resource and role model to primary care staff in the area of respiratory practice and PR; • Generate and contribute to the development of clinical standards and guidelines and support implementation with other MDT members. • Use specialist knowledge in Respiratory Care to support and enhance generalist Nursing/Midwifery practice. • Develop collaborative working relationships with local respiratory Physiotherapists/ CNSp's/Registered and Candidate Advanced Nurse Practitioner GP/Consultant/MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery; • With the support of the DPHN/PR Coordinator attend integrated care planning meetings as required. • Develop and maintain relationships with specialist services in Voluntary Organisations which support patients in the community. • Liaise with other health service providers in the development and on-going delivery of the National Clinical Programme model of care. • Network with other Clinical Nurse Specialist's in PR and respiratory care and in related professional associations. • Liaise with other chronic disease specialist teams (such as diabetes/heart failure) to discuss joint management/assessment needs of patients as necessary.

- Support, promote and actively participate in sustainable energy, water and waste initiatives to create a more sustainable, low carbon and efficient health service.

The above Job Specification is not intended to be a comprehensive list of all duties involved and consequently, the post holder may be required to perform other duties as appropriate to the post which may be assigned to him/her from time to time and to contribute to the development of the post while in office.

Clinical Nurse Specialist (Cardiovascular Disease)
Job Specification & Terms and Conditions

Job Title and Grade	Clinical Nurse Specialist Cardiovascular Disease – Integrated Care (CNSp. CVD)
Purpose of the Post	The role of the CNSp. CVD will differ according to the needs and configuration of established cardiology services at each site. The purpose of this integrated care CNSp. CVD post is to: provide expertise and specialist nursing services to patients with a cardiovascular condition both in hospital outpatient settings and in primary care. The post holder will liaise between acute cardiology services and integrated cardiology services in the community along with other agencies to deliver effective evidenced based care. They will use resources efficiently to achieve the best possible outcomes in keeping with the approved models of care and HIQA standards. The person appointed to this post will work in the newly formed Integrated Care Cardiology Service. The post holder will work as part of a multidisciplinary team (MDT) delivering coordinated evidence based care for patients in primary care whilst liaising closely with secondary care. The Integrated Care CNSp. CVD will deliver nurse-led clinics to provide support to patients and their GPs in creating management plans, assessing relevant treatments, assisting with diagnosis development and will provide education to patients and staff. This post is 80% working with GP’s in Primary Care, and 20% of CNSp CVD role will involve working with the Secondary Care Cardiology Team. In order to ensure continuity of service to patients the CNSp CVD may be required to rotate/ cover other parts of the integrated cardiology service such as Cardiac Rehabilitation. This will also promote service integration and enhance skillset development. It will be dependent on identified service needs at each site. If deemed appropriate, site rotation should occur within the first 3-6 months of taking up the post. The CNSp. CVD caseload will focus initially on the following patient groups: • Chronic Cardiovascular Disease • Atrial Fibrillations • Ischaemic Heart Disease

	Role Responsibilities The CNSp. CVD will deliver care in line with the five core concepts of the role set out in the Framework for the Establishment of Clinical Nurse/ Midwife Specialist Post, 4th ed. National Council for the Professional Development of Nursing and Midwifery (NCNM) 2008. The concepts are: • Clinical Focus • Patient/Client Advocate • Education and Training • Audit and Research • Consultant Clinical Focus The CNSp. CVD will have a strong patient focus whereby the specialty defines itself as nursing and subscribes to the overall purpose, functions and ethical standards of nursing. The clinical practice role may be divided into direct and indirect care. Direct care comprises the assessment, planning, delivery and evaluation of care to the patient, family and/ or carer. Indirect care relates to activities that influence others in their provision of direct care. The CNSp. CVD will work in conjunction with other team members in co-ordinating and developing the Integrated Care Service to meet the needs of the population it serves in line with the objectives of the organisation. Direct Care The Integrated Care CNSp. CVD will: • Provide a specialist nursing service for patients with cardiovascular disease that incorporates evidence based knowledge, investigative and analytical skills and specialist assessment techniques to triage comprehensibly assess and manage a range of complex presentations. • Use the outcomes of patient assessment to develop and implement plans of care/ case management in conjunction with the GP/ Consultant/ MDT and the patient, family and/ or carer as appropriate. • Monitor and evaluate the patient’s response to treatment and amend the plan of care accordingly in conjunction with the GP/ Consultant/ MDT and patient, family and/ or carer as appropriate. • Make alterations in the management of patient’s condition in collaboration with the GP/ Consultant/ MDT and the patient in line with agreed pathways, policies, protocols and guidelines (PPPG’s). • Manage nurse led Cardiology Clinics with GP/ Specialist input • Evaluate clinical problems using objective measurement tools • In conjunction with other team members, co-ordinate investigations, therapies and patient follow-up in secondary or primary care as appropriate.
--	---

- Use a case management approach to patients with complex needs, to include prescribing of appropriate medications if a Registered Nurse Prescriber (RNP) under governance protocols with a collaborative working agreement with each practice.
- Use agreed direct pathway for patients who may present/ become clinically unwell at time of attending/ engaging with the service.
- In collaboration with the GP and Consultant, co-ordinate investigations, treatment therapies and patient follow-up and referrals as required.
- Communicate with patients, family and/ or carer as appropriate, to assess patient's needs and provide relevant support, information, education, advice and counselling as required.
- Work collaboratively with MDT colleagues across Primary and Secondary Care to provide a seamless service delivery to the patient, family and/ or carer as appropriate.
- Participate in medication reconciliation taking cognisance of poly-pharmacy and support medical and pharmacy staff with medication reviews and medication management.
- Provide specialist interventions as appropriate
- Identify and promote specific symptom management strategies as well as the identification of triggers which may cause exacerbation of symptoms. Provide patients with appropriate self-management strategies and escalation/ de-escalation plans.
- Identify health promotion priorities for the patient, family and/ or carer and support patient self-care in line with best evidence and using the principles laid out by MECC (Make Every Contact Count). This will include the provision of educational and health promotion material which is comprehensive, easy to understand and meets patients' needs
- Assess patient understanding of treatment proposals, gain informed consent and have the capacity to work within a legal framework with patients who lack capacity to consent to treatment.
- Communicate with patients, families and friends, assess needs and provide relevant support, information, education, advice and counselling when and where necessary.

Indirect Care

- Identify and agree appropriate referral pathways for patients with cardiovascular disease
- Participate in case review with MDT colleagues
- Use a case management approach to patients with complex needs in collaboration with MDT in both Primary and Secondary Care
- Take a proactive role in the formulation and provision of evidence based PPPGs relating to Integrated Care. Contribute to the development and implementation of information sharing protocols, audit systems, referral pathways, individual care plans and shared care arrangements through regular collaboration/ meetings with cardiology nurses locally and nationally.
- Manage clinical risk within own clinical caseload, to have up to date knowledge of indications, contraindications and precautions for any treatment skills and techniques selected and applied throughout an individual course of treatment.

- Arrange referrals to other appropriate specialist services as deemed necessary
- Refer for further clinical psychological evaluation if felt necessary or requested by the patient and/ or their family.
- Effectively manage time and caseload in order to meet the needs of an evolving service
- Work closely with colleagues across services in order to provide a seamless integrated service for the patient
- Identify and utilise professional and voluntary resources and facilities at local and national level by direct and indirect referral
- Refer to relevant services to assist with procurement of domiciliary equipment and therapies that may be required by the patient
- Participate in the Departmental Clinical Governance processes, working in partnership with the Head of Departments, CNM3/ ADON, and Clinical Governance lead and local cardiology governance groups.
- Ensure that effective clinical governance procedures are maintained and evolve according to defined needs and demands in cardiology care.
- Maintain professional standards including patient and data confidentiality in line with HSE policy
- Develop and implement strategies as part of the Integrated Cardiology Care Team for delivering effective care within a changing environment using IT and alternative delivery strategies as needed.

Patient/Client Advocate

The Integrated Care CNSp. CVD will:

- Communicate, negotiate and represent patient's family and/ or carer values and decisions in relation to their condition in collaboration with GP/ Consultant/ MDT colleagues in both Primary and Secondary Care as appropriate
- Develop and support the concept of advocacy, particularly in relation to patient participation in decision making, thereby enabling informed choice of treatment options
- Respect and maintain the privacy, dignity and confidentiality of the patient, family and/or carer
- Establish, maintain and improve procedures for collaboration and cooperation between Acute Services, Primary Care and Voluntary Organisations
- Proactively challenge any interaction which fails to deliver a quality service to patients.
- Participate in meetings as a patient and service representative when requested to advocate and support the development of services/ staff in cardiovascular care
- Support the development of local patient advocacy groups pertinent to specialty
- Provide and advocate for appropriate assessments, supports and strategies for patients with disease related changes and difficulties.

Education & Training

	The Integrated Care CNSp. CVD will: • Maintain clinical competence in patient management within cardiology nursing, keeping up-to-date with relevant research to ensure the implementation of evidence based practice. • Provide the patient, family and/ or carer with appropriate information and other supportive interventions to increase their knowledge, skill and confidence in managing their cardiovascular conditions. • Contribute to the design, development and implementation of education programmes and resources for the patient, family and/ or carer in relation to cardiovascular disease thus empowering them to manage their own condition independently and autonomously. • Participate in training programmes for nursing, MDT colleagues and key stakeholders as appropriate. • Create exchange of learning opportunities within the MDT in relation to evidence based cardiovascular care delivery through journal clubs, conferences etc. • Develop and maintain links with Regional Centres for Nursing & Midwifery Education (RCNMEs), the Nursing and Midwifery Planning and Development Units (NMPDUs) and relevant third level Higher Education Institutes (HEIs) in the design, development and delivery of educational programmes in cardiovascular care; • Develop and deliver education and training programmes for the wider primary and secondary care MDTs as requested or deemed necessary • Be responsible for addressing own continuing professional development needs. <u>Audit & Research</u> The Integrated Care CNSp. CVD will: • Collect and maintain a record of clinically relevant data aligned to the business intelligence unit (BIU) and National KPI's as directed and advised by the National Heart Programme and senior management. • Provide annual reports/ updates on patient numbers and activity levels as required for service planning. • Identify, initiate and conduct nursing and collaborative MDT audit and research projects relevant to the area of practice. • Identify, critically analyse, disseminate and integrate best evidence relating to cardiovascular care into practice. • Contribute to nursing research on all aspects of cardiology nursing care • Use the outcomes of audit to inform service provision and the need for change • Contribute to service planning and budgetary processes through use of audit data and specialist knowledge. • Monitor, access, utilise and disseminate current relevant research to advise and ensure the provision of informed evidence based practice. • Contribute to the examination of patients and staffs experiences when engaging with Cardiac Rehabilitation and Integrated services • Assures all patient evaluations are performed and results communicated to the appropriate stakeholders.
--	---

	• Represent the department/ team at local, national and international meetings and conferences as appropriate. <u>Consultant</u> The Integrated Care CNSp. CVD will: • Provide leadership in clinical practice and act as a resource and role model to primary care staff in the area of cardiology practice. • Generate and contribute to the development of clinical standards and guidelines and support implementation. • Use specialist knowledge in cardiology care to support and enhance generalist nursing/ midwifery practice. • Develop collaborative working relationships with local cardiology CNSp's/ Registered and Candidate Advanced Nurse Practitioner's / GP's/ Consultants/ MDT colleagues as appropriate, developing person centred care pathways to promote the integrated model of care delivery. • With the support of the DPHN, attend integrated care planning meetings as required. • Develop and maintain relationships with specialist services in voluntary organisations which support patients in the community. • Liaise with other health service providers in the development and on-going delivery of the models of care. • Network with other CNSp.'s in cardiology care and in related professional associations. • Support the development of local disease specific patient support groups by acting as a specialist resource and point of contact for educational elements as needed. • Liaise with other chronic disease specialist teams (such as diabetes) to discuss joint management/ assessment needs of patients as necessary. • Be required to lead out on elements of nursing as a representative for Integrated Cardiology Care. The above Job Specification is not intended to be a comprehensive list of all duties involved and consequently, the post holder may be required to perform other duties as appropriate to the post which may be assigned to him/ her from time to time and to contribute to the development of the post while in office.
--	--

Cardiac Rehabilitation Coordinator (Cardiovascular Disease)

Job Specification & Terms and Conditions

Job Title and Grade	Cardiac Rehabilitation Coordinator (Grade Code TBC) Post can be held by either a CNS or Senior Physiotherapist – to be clarified
Purpose of the Post	Purpose of the Post The need to reform the healthcare services in Ireland in order to provide a more sustainable, integrated and patient-centred approach has come to the fore in recent health policies and strategies. Integrated care requires health and social care services to work together across different levels and sites in order to provide end-to-end care that meets patient need. Cardiac Rehabilitation requires an integrated professional team, consisting of qualified practitioners, led by a trained programme manager/ Coordinator - who will provide the overview necessary to ensure all components of cardiac rehabilitation and prevention are delivered. The Cardiac Rehabilitation Coordinator will offer dynamic leadership to promote and develop a high quality evidenced based Cardiac Rehabilitation Service championing innovation to improve and support service delivery. They will act as the representative clinical lead at local and national strategic development meetings disseminating information and acting on initiatives and improvements within the resources available. The post holder will coordinate resources and services for the Cardiac Rehabilitation Programme. The post holder will also act as an expert clinical resource offering supervision, education and on-going support to staff and teams managing complex cardiovascular patients. The Cardiac Rehabilitation Coordinator will be a highly competent, visible and experienced autonomous practitioner who uses specialist knowledge and advanced skills to support Cardiac Rehabilitation Services. They will have a good understanding of the vision of the HSE and Sláintecare and to be able to translate this into a local context for operational implementation within their team and local area.

	They will demonstrate advanced clinical judgement and critical decision-making skills based upon evidence based practice. The post-holder will utilise their advanced level knowledge and skills to: • Triage referrals and identify complex cases and optimise treatment with the Integrated Care Consultant Cardiologist and GP before commencing cardiac rehabilitation. • Accurately undertake specialist clinical skills, interpreting and analysing clinical and non-clinical tests to form an accurate assessment and decide suitability for cardiac rehabilitation. • Demonstrate a strong working knowledge of guidelines for best practice, competence in physical assessment skills and treatment of complex cardiovascular patients for cardiac rehabilitation • Assess, diagnose, plan, implement and evaluate treatments and interventions of cardiac rehabilitation • Integrate both pharmacological and non-pharmacological aspects of cardiac rehabilitation into patient care/ management plans • Be a competent autonomous practitioner, leading innovation and demonstrating cardiology clinical expertise and acting as a role model for others. • Lead, support and develop the team of health care professionals delivering cardiac rehabilitation and cardiovascular care to a wide range of patients. • Liaise with and give specialist advice to other members of the Multidisciplinary team (MDT) regarding the medical management of patients with cardiovascular problems, have knowledge of disease management pathways within secondary and primary care and be able to signpost and refer on appropriately • Carry out risk assessment of the service, equipment and environment to minimise risk within the team. • Continuously evaluate patient progress and outcomes. • Develop operational pathways, protocols and procedures to ensure the delivery of safe cardiac rehabilitation in accordance with local and national clinical standards. • Effectively manage capacity within the team and performance including waiting list management • Work with the Specialist Cardiology MDT and the service lead to strategically develop and operationally manage the Cardiac Rehabilitation Service. • Undertake the evaluation of current practices through the use of evidence based practice, audit and outcome measures and act upon results through making recommendations and implementing change. • Supporting staff during the process of change within the team and organisation.
	Communication and Working Relationships • To provide specialist exercise advice and support to multidisciplinary colleagues in the Cardiology Service and other professionals countywide involved in the delivery of cardiac rehabilitation.

- Develop strong links with Peer Support Groups and promote patient self-management in the community working in partnership with relevant agencies.
- Communicates with colleagues in the Integrated Care Cardiology Service and wider MDT, service users, carers, stakeholders, the public and their representatives, ensuring effective and accurate information is delivered.
- To actively engage with, listen to and seek views of team members, patients/ carers and key stakeholders to influence, enhance and improve accessibility and inclusiveness of future service development.
- To communicate with all team members and other relevant health, social care and education professionals e.g. social workers, specialist practitioners, GPs and practice staff, consultants, and any other statutory, voluntary and independent sector professionals.
- To be responsible for the initiation of communication links with patients/ carers in highly stressful/ complex situations to seek resolution, agreement regarding future treatment/ care and gain co-operation.

Management of the service

- To take personal responsibility for maximising opportunities to improve the use of resources and the quality of services that you are accountable for and to ensure that your line manager is engaged in the plans particularly where support is required to make the change happen effectively.
- To implement clinical governance and risk management and act upon aspects of service delivery that is identified as requiring attention.
- To participate in and supervise all aspects of the cardiac rehabilitation service including triage, assessment, reviewing and initiating treatment in the home or clinic setting.
- To network with other cardiac rehabilitation services locally, regionally and nationally, benchmarking the service against advances in cardiology care/ services ensure sharing and implementation of good practice
- To facilitate the sharing of information across disciplines and agencies as appropriate acting as a resource for specialist knowledge and advice in relation to the management of complex cardiovascular patients
- To develop and sustain dynamic and responsive multidisciplinary/multi agency community services delivering best practice.
- To work with the Locality Clinical Lead and other team leaders/managers to proactively support the development and redesign of care pathways embracing the concept of care closer to home and expanding/enhancing multi-disciplinary/multi agency working, community services and community hospitals.
- To coordinate the MDT rota, annual leave, study leave.
- To develop appropriate support, teaching, mentorship mechanisms for all team members and facilitate the sharing of information across disciplines and agencies.
- To adhere to professional codes of physiotherapy conduct and standards of competence relevant to team members and to provide specialist and expert clinical advice.
- To use technology as an aid for data capture in order to plan, implement, monitor and report upon outcomes and information.

- To offer innovative clinical leadership and management solutions to enable most effective use of resources for the benefit of patients.
- To ensure referral, assessment, planning, review and closure/discharge procedures within the team are consistent with expectations.
- To continuously review and integrate new developments and practice into the team to enhance service delivery.
- To audit, monitor and research service delivery, in order to continuously improve and develop the service.
- To assist the Locality Clinical Lead in producing reports to inform management groups, clinical forums, business development/planning and performance management monitoring.
- To be accountable for the planning of evidenced based, proactive specialist interventions requiring a high level of expertise in clinical skills.
- To promote health and wellbeing, the prevention of ill health and foster independence at every opportunity, whilst respecting the patient right to choose.
- To offer creative and dynamic leadership and management solutions to enable the delivery of effective change and subsequent service improvement.
- Responsible for the policy implementation and policy or service development within your team.
- To initiate and encourage evidence based practice and research within team and service to drive improvements.
- Chair meetings related to service delivery or case management where appropriate
- Co-ordinate services from Phase 1 through to phase IV, and ensures all aspects of the service are delivered according to a national standard.
- Co-ordinate appropriate referrals into and from the service.
- Demonstrates strong leadership and team management skills.
- Strong organizational skills
- Provision of safe and appropriate physical layout, with availability/ access to prompt assistance, and complying with Occupational Health and Safety for both patients and staff.
- Develops the education programme for phases 1-3. In conjunction with members of the MDT, continually review the content and quality and update same
- Discusses risk factor management with staff, MDT members and makes appropriate referrals and recommended changes according to guidelines.
- Identify appropriate content for MDT/ external referrals
- Liaises with relevant cardiovascular nurse specialists in other disciplines, as appropriate, regarding patients' conditions.
- Liaise with community services and GP's as appropriate.
- Development, implementation and review of quality assurance documents, risk assessment, policy, procedures and guidelines
- Management of service resources
- Promotes Patient advocacy

Team and People Development

- To ensure the skills and talents are actively recognised and developed within your team and the wider organisation.
- To take active steps to encourage, support and promote a culture of development, improvement and learning within the team.
- To encourage a proactive culture of 2 way communication and the sharing of information within the team and across disciplines that supports the philosophy of a well informed and positively engaged workforce.
- To promote and publicise your team/ service within the organisation.

Staff Management and Personal Development

- To provide leadership to junior staff and support staff through supervision, training and appraisal.
- Provide supervision and appraisal for junior staff and students within the team.
- Participates in in-service training with the Cardiac Rehabilitation Team and wider Integrated Care Cardiology Team.
- To manage and undertake audit and research in specific areas of clinical practice and service delivery using a range of research methodologies as part of a wider MDT.
- Take responsibility for own learning and performance including participation in clinical supervision and maintaining awareness of relevant research evidence.
- Act as a constant source of clinical and theoretical knowledge for members of MDT as well as patients and their significant others, providing support and clinical advice.
- Responsible for initiating and developing R&D programmes or activities.

Clinical Activities

- As an autonomous practitioner, undertake advanced assessments of patients with diverse or complex physical, psychological, cognitive and behavioural conditions in order to formulate a diagnosis and deliver appropriate treatment plans including exercise therapy e.g. Advanced HF with co-morbidities and several anxiety related issues.
- To undertake all aspects of clinical duties as an autonomous practitioner, including professional and legal accountability and managing clinical risk for all aspects of own work.
- Aspects of work will include delivery of treatment as an individual practitioner or as part of a MDT.
- To be responsible for the safe and competent assessment and treatment of patients with a complex history of cardiovascular conditions and co-morbidities within national and service guidelines and policies.
- As an autonomous practitioner, undertake advanced assessment of patients with diverse or complex physical, psychological, cognitive or behavioural conditions in order to deliver appropriate exercise therapy.
- Develop education in collaboration with the MDT ensuring that all patient care is based on current research and best practice.

Strategic Development, Planning and Organising

- To participate in service development and innovative ways of delivering exercise prescription for vulnerable people in the community with complex cardiovascular conditions, e.g. investigating and implementing the use of technology to support the delivery of cardiac rehabilitation programmes to people at home.
- Collation and interpretation of statistical data collected to measure outcomes and impact of cardiac rehabilitation programmes.
- Responsibility for planning and coordinating safe delivery of cardiac rehabilitation. Includes access to groups and ensuring correct staff:patient ratio (in keeping with National Guidelines).
- To participate in the development of team policies as required.
- Demonstrate clinical leadership in the effective and efficient use of resources, e.g. ordering stock, travel.

Administrative

- Maintain waiting list and appropriate KPIs in line with National Heart Programme
