

# UPDATE ON CONTINUOUS GLUCOSE MONITORING SENSORS

The HSE introduced a number of initiatives from December 2023 onwards, to support access to continuous glucose monitoring (CGM) sensors while managing expenditure in the area. There are increasing numbers of patients accessing CGM sensors while monthly expenditure in this area has declined when compared to 2023.

In the first year since the introduction of the reimbursement application system for CGM sensors, 2,949 new patients have received reimbursement support for this technology. In December 2024, 19,861 patients were in receipt of CGM sensors under the Community Drug Schemes.

In December 2024, 63% of new initiators on CGM sensors were commencing on a Preferred CGM sensor.
