Optimal Reperfusion Service (ORS) Protocol

STEMI diagnosis
(confirmed via 12 lead ECG at first medical contact)

Is transport to PPCI centre possible within 90 mins?

NO → **Give thrombolysis** (pre-hospital or in-hospital ✚)

YES → **Emergency Ambulance transfer**

Urgent Ambulance transfer

PPCI Centre ✚

As around 30% of thrombolysed patients either fail to reperfuse or re-infarct, timely transfer to a PPCI centre for rescue PCI is important.

If PPCI Centre is not patient's local hospital then after PPCI, do a local hospital transfer to engage with local rehabilitation team.
