COVID-19 Data Summary, Wednesday 2nd March 2022 Weekly Report on COVID-19 Statistical Process Control Charts

2nd March 2022

Epoch 3: Plateau or Descent in Daily Reported Cases

From 24th **Dec** the number of daily cases increased rapidly and we entered Epoch 2, rapid growth.

On 14th January we entered Epoch 3 (plateau or descent in daily reported cases). On 24th January we entered a plateau with 4,955 daily cases expected. From 24th Feb we entered a plateau at a lower level with 3,210 daily cases expected based on current data.

Note: This data is based on positive PCR tests only and does not include positive antigen tests. There was a change in policy on 14th January with people aged 4-39 years no longer requiring a confirmatory PCR after a positive antigen test.

From 17th Dec 2021 Ireland entered epoch 2 experiencing rapid growth in daily hospital admissions.

The number of daily hospital admissions continued to increase and we remained in the rapid growth phase until 13th January. From 14th January we returned to Epoch 3 (plateau or descent in daily hospital admissions), and admissions trended downwards.

On 18th February we re-entered epoch 2: growth in daily reported hospitalisations. Based on current data we would expect 84 admissions on March 14th.

Phase Change

The number of new ICU admissions per day of COVID positive patients had been trending downwards since January 2021. From 18th August to 21st Nov 2021 ICU admissions remained stable but a higher level than preceding weeks (4.8 per day).

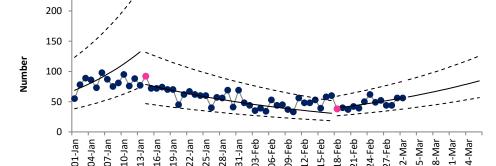

From 22nd Nov 2021 to 27th Jan 2022 ICU admissions increased to 7.2 per day (50 a week).

From the 28th Jan to 20th Jan the average number of expected ICU admissions decreased to 4.1 per day (30 a week).

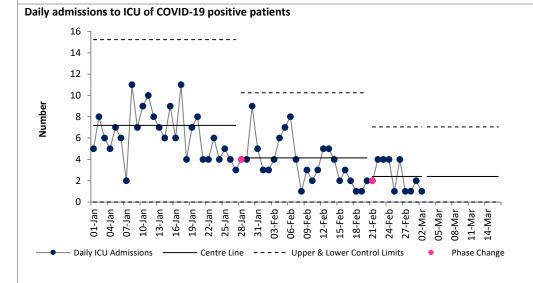

From 21st Feb the average number of expected ICU admissions stabilised at a lower rate of 2.4 per day (17 a week).

Daily Hospitalisations

Centre Line ---- Upper & Lower Control Limits

Note that due to the cyber attack data on daily notified deaths of people with COVID-19 are not currently available.
