13.11 Clinical considerations .....	40
<b>Useful links .....</b>	<b>42</b>

This guidance is intended for vaccinators who are administering COVID-19 vaccines.

Vaccinators should be trained and competent in immunisation practice.

Vaccinators should have undergone training in the administration of COVID-19 vaccine(s), recognition and management of anaphylaxis, and basic life support and intramuscular injection technique. They should also be familiar with the NIAC algorithm on Anaphylaxis: Immediate management in the community available at <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**In some circumstances, advice in these guidelines may differ from that in the Summary of Product Characteristics (SmPC) of the vaccines. When this occurs, the recommendations in these guidelines, which are based on current expert advice from the National Immunisation Advisory Committee should be followed.**

## 1. Introduction

The objective of the vaccination programme for SARS-CoV-2 is to ensure equitable access to a safe and effective vaccine with the goals of limiting mortality and morbidity from COVID-19, protecting healthcare capacity and enabling social and economic activity.

### Purpose of the document

This document has been prepared as a means of providing clinical guidance to all clinicians administering COVID-19 vaccines as part of the COVID-19 vaccination programme.

### Indemnity for vaccinators

Claims management in relation to claims and litigation initiated in connection with COVID-19 vaccination is to be delegated to the State Claims Agency by means of Government Order. Registered medical practitioners (including GPs), nurses, pharmacists, physiotherapists, dentists, dental hygienists, optometrists, radiographers and radiation therapists, paramedics, advanced paramedics, emergency medical technicians and relevant healthcare students (as per the Statutory Instruments for the administration of COVID-19 vaccines), in receipt of relevant training with regard to administration of the vaccines, who are administering vaccines on the direction of, or on behalf of, the Health Service Executive (HSE) will be indemnified with regard to any adverse product liability-related events arising from their administration of the vaccine. Vaccinators working in GP surgeries and retail pharmacies however, will not be indemnified in respect of malpractice events occurring during the administration of the vaccine. Their professional insurers will indemnify such malpractice events.

## 2. Vaccine recommendations

Current recommendations for the primary COVID-19 vaccination schedule from the National Immunisation Advisory Committee (NIAC) guidance as published in October 2024 are summarised in **Table 1**.

For further information on the NIAC recommendations for primary COVID-19 vaccination, please see table 5a.1 in chapter 5a of the NIAC Immunisation Guidelines

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Table 1: NIAC recommendations for primary schedule of COVID-19 vaccines**

Primary schedule		Number of doses	Available vaccines
<b>60 years and older</b>	Recommended	Single dose of Comirnaty mRNA COVID-19 vaccine.	Comirnaty KP.2 30 micrograms
<b>6 months-59 years<sup>1</sup></b>	Recommended for: <ul style="list-style-type: none"> <li>Those aged 18 living in long-term care facilities for older adults.</li> <li>Those with immunocompromise associated with a suboptimal response to vaccination.<sup>2</sup></li> <li>Those with medical conditions associated with a higher risk of COVID-19 hospitalisation, severe disease or death.<sup>3</sup></li> </ul>	<b>12-59 years</b> Single dose of Comirnaty mRNA COVID-19 vaccine.	<b>12-59 years</b> Comirnaty KP.2 30 micrograms
		<b>5-11 years</b> Single dose of Comirnaty mRNA COVID-19 vaccine.	<b>5-11 years</b> Comirnaty KP.2 10 micrograms
		<b>6 months-4 years</b> Single dose of Comirnaty mRNA COVID-19 vaccine for those with a prior history of SARS-CoV-2 infection. <sup>4</sup> Two doses of Comirnaty mRNA COVID-19 vaccine for those with no prior history of SARS-CoV-2 infection. Four weeks interval between dose one and dose two.	<b>6 months-4 years</b> Comirnaty KP.2 3 micrograms
<b>Health and care workers</b>	Recommended	Single dose of Comirnaty mRNA COVID-19 vaccine. <sup>2</sup>	<b>See above for age-appropriate vaccine</b>
<b>Pregnancy</b>	Recommended	Single dose of Comirnaty mRNA COVID-19 vaccine. <sup>2</sup>	<b>See above for age-appropriate vaccine</b>

1. Access to the primary schedule should be available for those aged 6 months-59 years who, following discussion with a health care provider (e.g., GP, pharmacist or HSE vaccinator), request vaccination.
2. For immunocompromised, two doses are recommended with a four week interval between dose one and dose two. A third dose may be administered, eight weeks after the second dose, following instruction from a relevant specialist physician. A minimum interval of four weeks between the second and third

dose may be used if there is urgency to achieve protection.

3. Medical conditions associated with a higher risk of COVID-19 hospitalisation, severe disease or death are outlined in Table 3
4. Prior history of COVID-19 can be confirmed by either a positive PCR test, a positive antigen test or by clinical diagnosis. For example, a single dose primary schedule could be considered in a child aged 6 months-4 years who had symptoms consistent with COVID-19 at a time when household contacts tested positive

Recommendations for COVID-19 booster vaccination from the National Immunisation Advisory Committee (NIAC) guidance published in March 2025 are summarised in **Table 2**.

For further information on seasonal booster recommendations in for the spring vaccination programme in 2025, please see table 5a.2 in chapter 5a of the NIAC Immunisation Guidelines

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Table 2: NIAC Recommendations for Spring COVID-19 booster vaccination**

**Table 5a.2** Recommendations for COVID-19 booster vaccination in Spring 2025

Age	Irrespective of the number of previous doses or types of COVID-19 vaccine received, a COVID-19 vaccine is:	Available vaccines
<b>80 years and older</b>	Recommended	Comirnaty KP.2 30 micrograms  Nuvaxovid JN.1 5 micrograms
<b>70-79 years</b>	Recommended if have not received a COVID-19 vaccine in the preceding 12 months.	Comirnaty KP.2 30 micrograms  Nuvaxovid JN.1 5 micrograms
<b>6 months-79 years</b>	Recommended for: <ul style="list-style-type: none"> <li>Those aged 18-79 years living in long term care facilities for older adults.</li> <li>Those with immunocompromise associated with a suboptimal response to vaccination.</li> </ul>	<b>12-79 years</b> Comirnaty KP.2 30 micrograms Nuvaxovid JN.1 5 micrograms <b>5-11 years</b> Comirnaty KP.2 10 micrograms <b>6 months-4 years</b> Comirnaty KP.2 3 micrograms
<b>Pregnancy</b>	Recommended - all year and not seasonal.  For pregnant adolescents and adults, a COVID-19 vaccine once <sup>1</sup> in pregnancy is recommended if it is more than six months since their previous COVID-19 vaccine or infection.  COVID-19 vaccine can be given at any stage in pregnancy, ideally between 20-34 weeks' gestation.	<b>See above for age-appropriate vaccine</b>

<sup>1</sup> For those who are pregnant and are immunocompromised, a second vaccine dose within the same pregnancy may be considered if six months has elapsed since their last vaccine dose or SARS-CoV-2 infection.

For those aged 6 months-79 years who are immunocompetent, a dose of a COVID-19 vaccine in Spring 2025 is not routinely recommended. For those aged 70-79 years who did not receive a COVID-19 vaccine in the preceding 12 months, a dose of COVID-19 vaccine is recommended in Spring 2025.

**OF NOTE:** For up to date NIAC recommendations for a Primary COVID-19 Vaccination Schedule, please consult section 5a.5.1 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**OF NOTE:** For up to date NIAC recommendations for COVID-19 Booster Vaccination, please consult see section 5a.5.2 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**OF NOTE:** For Medical conditions associated with a higher risk of COVID-19 hospitalisation, severe disease or death, please consult table 5a.3 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 3. COVID-19 vaccines

**Table 3** shows the vaccines that are recommended by the National Immunisation Advisory Committee (NIAC) following approval by the European Medicines Agency (EMA) that are currently available as part of the COVID-19 Immunisation Programme in Ireland.

**Table 3: Vaccines currently used in the COVID-19 Immunisation Programme**

mRNA VACCINES		
<b>Comirnaty KP.2 3 mcg (0.3 ml)</b> (Yellow Cap - requires Dilution before use)	<b>Pfizer/BioNTech</b>	Vaccination of children aged 6 months-4 years
<b>Comirnaty KP.2 10mcg (0.3ml)</b> (Blue Cap – Ready to Use (RTU))	<b>Pfizer/BioNTech</b>	Vaccination of individuals aged 5-11 years
<b>Comirnaty KP.2 30mcg (0.3ml)</b> (Grey Cap – Ready to Use (RTU))	<b>Pfizer/BioNTech</b>	Vaccination of individuals aged 12 years and older

Further regulatory information on all COVID-19 vaccines can be found in the approved product information (Summary of Product Characteristics (SPC) for health care professionals, and Package Leaflet (PIL) for the public), and is available via the EMA website [www.ema.europa.eu](http://www.ema.europa.eu).

## 4. Infection prevention and control for the administration of COVID-19 vaccines

Prior to preparation and administration of COVID-19 vaccines, hand hygiene should be performed as per the “WHO five moments of hand hygiene” with emphasis on:

- Before vaccine preparation
- Before drawing up and administering the vaccine
- Before and after each recipient contact

Check Health Protection Surveillance Centre (HPSC) website for the latest guidance on infection prevention and control (IPC) for healthcare workers: <https://www.hpsc.ie/a-z/respiratory/coronavirus/novelcoronavirus/guidance/infectionpreventionandcontrolguidance/>

All vaccinators should follow the Infection Prevention and Control (IPC) precautions and management in line with the latest National Clinical Guideline No. 30 (2023) Infection Prevention and Control (IPC), available at <https://www.gov.ie/en/publication/a057e-infection-prevention-and-control-ipc/>

It is not necessary to use gloves for vaccine injections, unless contact with potentially infectious body fluids is possible, or unless the health care worker has an infected lesion on the hand. If gloves are worn, they should be changed for each patient.

If the skin at the injection site is visibly dirty it should be cleaned with soap and water. There is no need to use a disinfectant e.g. alcohol swabs.

If an alcohol swab is used, injection should be delayed for  $\geq 30$  seconds, to ensure the alcohol will have evaporated.

There is no need to routinely check temperature either at registration or before vaccination.

Further information on General Immunisation Procedures is available in Chapter 2 of the National Immunisation Advisory Committee guidance for Ireland <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

## 5. Vaccine details, storage and instructions for preparation and administration.

Vaccines undergo rigorous checks and quality steps prior to final release from the manufacturer.

SmPCs usually state: "The vaccine should be inspected visually for particulate matter and discolouration prior to administration. Discard the vial if the suspension is discoloured or visible particles are observed."

When a vaccinator is concerned regarding a vial the following steps should be followed:

- The vaccinator should contact another healthcare professional (HCP) who has experience in using this product and ask for a second opinion
- The affected vial should be returned to the **fridge** and kept there in **Quarantine** (between +2°C and +8°C)
- The vial in quarantine should be placed in a clearly marked area in the fridge "Quarantine - do not use"
- The vaccinator and senior experienced HCP should check the other vials in this batch in their fridge by removing one vial at a time and ensuring that the duration out of the fridge is kept to a minimum
- If more vials are considered defective, they should calculate the impact of placing vials into quarantine and arrange for additional deliveries if required.
- The Health Products Regulatory Authority (HPRA), manufacturer and HSE National Immunisation Office (NIO) should be emailed with details of the issue and with a photograph of vial identifying the defect (if possible).
- The NIO will follow up and contact other locations where this batch has been delivered if necessary.

**Please ensure vaccines are stored between +2°C and +8°C.**

Should vaccines be exposed to temperatures outside of these parameters please contact the NIO immediately by emailing [pharmacynio@hse.ie](mailto:pharmacynio@hse.ie)

Do not use or discard the vaccines until advised by the National Immunisation Office.

## 6. COVID-19 mRNA vaccines

For those aged 12 years and older, Comirnaty KP.2 30 micrograms (0.3 ml) is the preferred vaccine for primary and booster vaccination.

**OF NOTE:** For information about the primary vaccination dose and schedule for those age 12 years and older for Comirnaty KP.2 30 micrograms (0.3 ml) please consult Section 5a.5.1, section 5a.5.3.1.1 and table 5a.1 in chapter 5a of the NIAC Immunisation Guidelines. <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

Please refer to **Section 9 Booster COVID-19 Vaccines** for further details in relation to booster vaccination.

For information about vaccines for children aged 5-11 years see **Section 12 Vaccination of Children aged 5-11 years**.

For information about vaccines for children aged 6 months-4 years see **Section 13 Vaccination of Children aged 6 months-4 years**.

**Table 4: Comirnaty 30 micrograms/doses (0.3ml)**

Title	Description
Type of vaccine	mRNA
Name of vaccines	<ul style="list-style-type: none"> <li>Comirnaty KP.2 30 micrograms/dose dispersion for injection</li> <li></li> </ul>
Excipients	<ul style="list-style-type: none"> <li>((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315)</li> <li>2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159)</li> <li>1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC)</li> <li>Cholesterol</li> <li>Trometamol</li> <li>Trometamol hydrochloride</li> <li>Sucrose</li> <li>Water for injections</li> </ul>
Presentation	The vaccines are contained in a multi-dose clear vial (type I glass)
Number of doses in each vial	6 doses. If a seventh dose of 0.3 ml can be safely and accurately withdrawn from a vial, it is a valid dose.
Dilution	<b>DO NOT DILUTE</b>
Latex	The vial stopper does not contain latex.
Dosage	0.3 ml (30 mcg) intramuscularly

Vial verification	
<ul style="list-style-type: none"> <li>Comirnaty KP.2 30 micrograms/dose dispersion for injection (12 years and older).</li> </ul>	
	<ul style="list-style-type: none"> <li>Check "Use Before" date and time on the vaccine box.</li> <li>Verify that the vial has a grey plastic cap, and the product name is Comirnaty KP.2 30 micrograms/dose dispersion for injection (12 years and older).</li> </ul>
	<ul style="list-style-type: none"> <li>Gently mix by inverting vials 10 times prior to use. Do not shake</li> <li>Prior to mixing, the thawed dispersion may contain white to off-white opaque amorphous particles.</li> <li>After mixing, the vaccine should present as a white to off-white dispersion with no particulates visible.</li> <li>Do not use the vaccine if particulates or discolouration are present.</li> </ul>
Preparation of individual 0.3 ml doses of Comirnaty 30 mcg/dose vaccine	
	<ul style="list-style-type: none"> <li>Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab.</li> <li>Withdraw 0.3 ml of Comirnaty 30 mcg/dose formulation. Low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial.</li> <li>Each dose must contain 0.3 ml of vaccine.</li> <li>If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 ml, discard the vial and any excess volume.</li> <li>Record the appropriate date/time on the multidose vial. Discard any unused vaccine 12 hours after first puncture.</li> </ul>

### Shelf life and transportation of Comirnaty 30 micrograms/dose formulations

	Description
<b>Expiry date</b>	The date the vaccine expires when continuously stored in an ULT freezer at -90°C to -60°C. The batch number on the side of each vial is recorded in the patient record. This is linked to the expiry date.
<b>“Use before” date and time - Maximum time from removal from ultra-low temperature (ULT) freezer to expiry, when stored at +2°C to +8°C</b>	<b>USE BEFORE date and time.</b> This time and date will be labelled on the box by the NCCS. The vials must be used before the USE BEFORE date and time. The USE BEFORE date must be recorded in the person’s record.
<b>“Discard” date and time - Maximum time allowed from first puncture of vial to expiry</b>	<p>After first puncture, the vaccine must be used within 12 hours (when stored at +2 °C to +30 °C) e.g. Vial is punctured 17/04/2025 at 10.00. Discard time is 17/04/2025 at 22.00. This is the date and time that should be written on the vial. Any unused or partially unused vials must be discarded when this time has been reached.</p> <p>From a microbiological point of view, unless the method of opening precludes the risks of microbial contamination, the product should be used immediately. If not used immediately, in-use storage times and conditions are the responsibility of the user</p>
<b>Transportation time</b>	<p><b>Unpunctured vial.</b> No limit within the USE BEFORE date and time, when stored at +2 °C to +8 °C</p> <p><b>Punctured vial</b> Up to 6 hours transportation time within the 12-hour discard date and time when stored at +2 °C to +30 °C.</p>

## 7. Contraindications and precautions to COVID-19 vaccines

Of Note: For full list of contraindications and precautions to COVID-19 vaccines see Table 5a.4 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

Of Note: For Contraindications and precautions to Comirnaty vaccines for those age 12 years and older please see section 5a.5.3.1.1 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

Of Note: For information on patients planning immunosuppressing therapy, please see section 5a.4.11 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

Of note: For further information see Frequently Asked Questions about COVID-19 vaccines for people with pre-existing allergic conditions <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Hot-topics-and-resources/Hot-topics-and-general-resource.ie>

Refer to section 12 Vaccination of Children age 5-11 years for details of vaccination of children aged 5-11 years

Refer to section 13 Vaccination of Children age 6 months to 4 years for details of vaccination of children aged 6 months-4 years

For information on Vaccination after COVID-19, please see section 5a.4.8 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

## 8. Clinical considerations for COVID-19 vaccines

### 1. COVID-19 vaccines in pregnancy

**Of Note:** For information on COVID-19 vaccines in Pregnancy, please see section 5a.4.9 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For primary vaccination schedule recommendations during pregnancy, please see section 5a.5.1 and table 5a.1 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For booster vaccination recommendations, please see section 5a.5.2 and table 5a.2 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland> and additionally please refer to Section 9 in this document, Booster COVID-19 vaccines, for further details of booster vaccinations.

Continuing evidence regarding mRNA COVID-19 vaccination during pregnancy has demonstrated it to be safe and effective. The NIAC has reviewed the evidence regarding safety and timing of COVID-19 primary and booster vaccines in pregnancy. Current data are very reassuring regarding the safety of COVID-19 mRNA vaccines given at any stage in pregnancy either as a primary vaccine or as a booster. The EMA, UK Health Security Agency, and CDC have been monitoring the safety of COVID-19 vaccines in pregnancy<sup>1,2,3</sup>. These safety monitoring systems have not reported any safety concerns for people who receive an mRNA COVID-19 vaccine at any stage of pregnancy. Less data are available regarding non-mRNA vaccines.

Additionally, NIAC and the Institute of Obstetricians and Gynaecologists have developed materials to support healthcare workers and pregnant women in decision making about COVID-19 vaccination.

Visit <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Hot-topics-and-resources/Hot-topics-and-general-resources>

### 8.2 Breastfeeding

**Of Note:** For information on COVID-19 vaccines and breastfeeding, please see section 5a.4.10 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 8.3 Individuals with a bleeding disorder

**Of Note:** For information regarding individuals with bleeding disorders, please see section 2.4.6 in chapter 2 of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 8.4 Individuals taking anticoagulants

**Of Note:** For information regarding individuals taking anticoagulants, please see section

<sup>1</sup> European Medicines Agency. COVID-19: latest safety data provide reassurance about use of mRNA vaccines during pregnancy 2022 [Available from: <https://www.ema.europa.eu/en/news/covid-19-latest-safety-data-provide-reassurance-about-use-mrna-vaccines-during-pregnancy> accessed 21 Feb 2023.

<sup>2</sup> Agency UHS. COVID-19 vaccine surveillance report. Week 29, 18 July 2024 [Available from: [https://assets.publishing.service.gov.uk/media/669923b20808eaf43b50d1fd/Vaccine\\_surveillance\\_report\\_2024\\_week\\_29.pdf](https://assets.publishing.service.gov.uk/media/669923b20808eaf43b50d1fd/Vaccine_surveillance_report_2024_week_29.pdf) accessed 17 Oct 2023.

<sup>3</sup> Centres for Disease Control and Prevention. COVID-19 Vaccination for People who are Pregnant or Breastfeeding 2024 [Available from: <https://www.cdc.gov/covid/vaccines/pregnant-or-breastfeeding.html> accessed 17 October 2024.

**2.4.6 in chapter 2 of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>**

People on Warfarin should follow their usual schedule for international normalised ratio (INR) testing and can be vaccinated if the INR is less than 4.0. If the INR is 4.0 or more, follow the advice of the clinic/practice managing the Warfarin treatment and wait until the INR is less than 4.0 to be vaccinated.

**8.5 Technique for IM injections in persons with bleeding disorders or on anticoagulants**

**Of Note:** For information regarding technique for IM injections in persons with bleeding disorders or on

Anticoagulants, please see chapter 2 of the NIAC Immunisation Guidelines

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**8.6 Co-administration of COVID-19 vaccines with other inactivated or live vaccines**

**Of Note:** For information on co-administration of COVID-19 vaccines with other vaccines please see section 5a.4.6 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**8.7 Immunosuppression due to disease or treatment**

Individuals with immunosuppression due to disease or treatment should be vaccinated if they have no contraindications.

**For further information on Immunocompromised patients, please see section 5a.4.11 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>**

**8.8 Primary course for those with immunosuppression due to disease or treatment**

Comirnaty KP.2 30micrograms COVID-19 vaccine is the preferable vaccine, and should be given as per the optimal or minimum intervals recommended by NIAC.

**Of Note:** For primary vaccination schedule recommendations, including optimal and minimal intervals, please see section 5a.5.1, table 5a.1 and section 5a.5.3.1.1 (Comirnaty vaccines for those age 12 years and older) in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**8.9 People being treated with chemotherapy for cancer**

Chemotherapy is not a contraindication to COVID-19 vaccination. People taking chemotherapy should be vaccinated according to their recommended group (provided there are no contraindications).

**Vaccination for children aged 5-11 years is discussed in a separate section within this guidance document (see Section 12 Vaccination of Children age 5-11 years).**

**Vaccination for children aged 6 months-4 years is discussed in a separate section within this guidance document (see Section 13 Vaccination of children age 6 months to 4 years).**

## 9. COVID-19 booster vaccines

Irrespective of the vaccine type used in the primary schedule, **Comirnaty KP.2 vaccine** at an age-appropriate dose is the preferred booster vaccine.

**Of Note:** Booster doses should be given as per the recommendations in Table 2 of this document (or Table 5a.2 of the NIAC Immunisation Guidelines for Ireland).

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### **Booster vaccination for those aged 12 years and older:**

The following mRNA vaccine is available in Ireland for booster vaccination of those **aged 12 years and older:**

**Comirnaty KP.2 30 micrograms (0.3 ml) NOTE:** The National Immunisation Advisory Committee (NIAC) recommends the preferential use of antigenically updated COVID-19 mRNA vaccines; Comirnaty KP.2 for vaccination of those aged 12 years and older in Ireland.

For **recommended intervals for seasonal booster vaccination** in Spring 2025 for those aged 12 years and older, please see [Table 2 or table 5a.2 in chapter 5a of the NIAC Immunisation Guidelines](#)

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

A **6 month** interval from previous COVID-19 vaccine dose or SARS-CoV-2 infection is recommended for those receiving a booster as part of the Spring vaccination programme 2025.

- A minimum interval of **3 months** is permissible in certain circumstances e.g. planned immunosuppressive therapy or for operational reasons.
- Therefore, there should be **at least a 3 month interval** since last COVID-19 vaccine or SARS-CoV2 infection.

**Of Note:** For further information on booster vaccination after COVID-19 infection, please see section 5a.4.8 in chapter 5a of the NIAC Immunisation Guidelines

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

Table 7: COVID-19 booster vaccines: Summary for those aged 12 years and older

Description	<ul style="list-style-type: none"> <li>Comirnaty KP.2 30 micrograms (0.3 ml)</li> </ul>
Vial cap colour	Grey cap
Indication for booster vaccination	<p>Aged 12 years and older</p> <p><b>Use for primary and booster vaccination</b></p> <p><i>Preferred booster vaccines</i></p>
Dose volume (dose)	<b>0.3 ml (30 mcg)</b>
Dilution	<b>READY TO USE</b> <b>DO NOT DILUTE</b>
Doses per vial	6
Interval since last dose of COVID-19 vaccine or SARS-CoV-2 infection	<p>6 months (3 months in certain circumstances e.g. planned immunosuppressive therapy or operational reasons)</p> <p>Therefore, there should be <b>at least a 3 month interval</b> since last COVID-19 vaccine or SARS-COV2 infection.</p>

**OF NOTE:** For information about COVID-19 booster vaccines for children aged 5-11 years see **Section 12** Vaccination of Children aged 5-11 years.

**OF NOTE:** For information about COVID-19 booster vaccines for children aged 6 months-4 years see **Section 13** Vaccination of Children aged 6 months-4 years

### **Booster vaccination in pregnancy**

**Of Note:** For booster recommendations in pregnancy including recommended intervals since last COVID-19 vaccine or SARS CoV-2 infection please see table 5a.2 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**mRNA COVID-19 vaccines remain the preferred option for use in pregnancy.**

## 10. Post vaccination

### 10.1 Recording vaccination

The individual should be given a record of vaccination and HSE post vaccination advice leaflet.

Vaccine administration should be recorded in the IT system (COVAX, GPVax or Pharmavax).

Record the “USE BEFORE date and the batch number in the vaccination record (written on the vaccine box by the NCCS).

### 10.2 Observation period

Cases of anaphylaxis have been reported following administration of COVID-19 vaccines.

Please note that NIAC recommends a **15 minute observation** period following administration of a COVID-19 vaccine.

#### **Recommended observation period following COVID-19 vaccination (includes booster vaccination):**

- All vaccine recipients (see exceptions below): 15 minutes of observation
- Those with a history of mastocytosis: 30 minutes
- Those with immediate itching, swelling or urticarial reaction at the vaccination site: 30 minutes or longer as clinically indicated

Vaccine recipients should be advised to seek urgent medical attention if they have symptoms suggestive of an allergic reaction such as difficulty breathing, feeling faint, rapid heartbeat or a skin rash.

# 11. Adverse reactions

## 11.1 Adverse reactions after COVID-19 vaccination

Please refer to the relevant Summary of Product Characteristics for further details.

The adverse events are listed in **Table 8 and Table 9** according to the following frequency:

- Very common ( $\geq 1/10$ )
- Common ( $\geq 1/100$  to  $< 1/10$ )
- Uncommon ( $\geq 1/1,000$  to  $< 1/100$ )
- Rare ( $\geq 1/10,000$  to  $< 1/1,000$ )
- Very rare ( $< 1/10,000$ )

The safety of Comirnaty KP.2 and Comirnaty JN.1 vaccines are inferred from safety data of the prior Comirnaty vaccines.

**Table 8: Adverse reactions from COVID-19 vaccine Comirnaty from clinical trials and post authorisation experience**

Type of Reaction	Comirnaty® (Pfizer BioNTech)
<b>Very Common (<math>\geq 1/10</math>)</b>	<b>Local:</b> injection site pain, injection site swelling
	<b>General:</b> arthralgia, fatigue, fever****, chills, headache, myalgia, diarrhoea
<b>Common (<math>\geq 1/100</math> to <math>&lt; 1/10</math>)</b>	<b>Local:</b> injection site erythema
	<b>General:</b> nausea, vomiting, lymphadenopathy***
<b>Uncommon (<math>\geq 1/1,000</math> to <math>&lt; 1/100</math>)</b>	<b>Local:</b> injection site pruritus
	<b>General:</b> insomnia, extremity pain (refers to the vaccinated arm), hyperhidrosis, night sweats, decreased appetite, asthenia, malaise, lethargy, hypersensitivity reactions (e.g. rash, pruritus, urticaria****, angioedema****), dizziness
<b>Rare (<math>\geq 1/10,000</math> to <math>&lt; 1/1,000</math>)</b>	<b>General:</b> acute peripheral facial paralysis
<b>Very rare (<math>&lt; 1/10,000</math>)</b>	Myocarditis and pericarditis
<b>Not known (cannot be estimated from the available data)</b>	Anaphylaxis, Facial swelling in those who have had dermatological fillers, Extensive swelling of the vaccinated limb, Erythema Multiforme, Paraesthesia, Hypoaesthesia, Heavy menstrual bleeding**
<p>**Most cases appeared to be non-serious and temporary in nature</p> <p>*** In participants 5 years of age and older, a higher frequency of lymphadenopathy was reported after a booster (<math>\leq 2.8\%</math>) dose than after primary (<math>\leq 0.9\%</math>) doses of the vaccine.</p> <p>**** The frequency category for urticaria and angioedema was rare.</p> <p>***** A higher frequency of pyrexia (after Comirnaty®) was observed after the second dose compared to the first dose.</p>	

Events of **anaphylaxis have been reported after COVID-19 vaccination**. Appropriate medical treatment and supervision should always be readily available in case of an anaphylactic reaction following the administration of the vaccine

Very rare events of **neuroinflammatory disorders** have been reported following COVID-19 vaccination. A causal relationship has not been established

If required, symptomatic treatment with analgesic and/or anti-pyretic medicinal products (e.g.

paracetamol containing products or ibuprofen) may be used. Note: Ibuprofen is not recommended for pregnant women.

Events of **anaphylaxis have been reported after COVID-19 vaccines**. Appropriate medical treatment and supervision should always be readily available in case of an anaphylactic reaction following the administration of the vaccine

If required, symptomatic treatment with analgesic and/or anti-pyretic medicinal products (e.g. paracetamol containing products or ibuprofen) may be used. Note: Ibuprofen is not recommended for pregnant women.

### **11.2 Myocarditis and pericarditis**

Myocarditis and pericarditis are very rare side effects of mRNA vaccines. Healthcare professionals should consult applicable guidance and/or consult a Cardiologist for advice on management.

Myocarditis or pericarditis usually present with symptoms of chest pain, tachycardia or breathlessness. Vaccinees should always be made aware of these symptoms and told to seek medical advice if such symptoms occur after vaccination.

**Of Note: For information on myocarditis and pericarditis please see section 5a.4.3 (COVID-19 vaccine safety) in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>.**

Please see Summary of Product Characteristics (SmPC) for further information on [www.hpra.ie](http://www.hpra.ie)

### **11.3 Reporting adverse reactions**

The HPRA is responsible for managing the national pharmacovigilance system. The HPRA reports nationally occurring adverse reactions to the EMA.

Adverse reaction reporting is an important part of the EMA intensive monitoring plan for COVID-19 vaccines, so that any changes in benefit risk balance can be promptly detected and acted upon. This enables the EMA to continue to safeguard public health safety.

COVID-19 vaccines are subject to additional monitoring. This will allow quick identification of new safety information.

Healthcare professionals and members of the public are encouraged to report any suspected adverse reactions to the HPRA following the instructions available on the HPRA website [www.hpra.ie](http://www.hpra.ie). As much information as is known should be provided, and where possible, the vaccine batch number should be included.

### **11.4 Reporting of incidents during the vaccination session to HSE**

In the case of medication errors that directly involve the vaccine recipient, i.e. wrong medication/dose/route being administered or another medication error, the vaccinator must remain with the person and closely monitor them for any adverse reactions.

The incident must be reported to the relevant line manager/person in charge as soon as possible. The

incident and all actions taken must be recorded and the relevant National Incident Management Report Form (NIRF) completed as soon as is practicable after the event occurs and within one working day.

(National Incident Report Form (NIRF 01 – V12)) (2021) available at:

<https://www.hse.ie/eng/about/qavd/incident-management/>

The **vaccine recipient and/or significant others should be informed of the incident**. An incident report form must be completed by the vaccinator and forwarded to local or regional Risk Manager as per local policy.

Any suspected adverse reactions associated with medication errors should be reported to the HPRA as outlined above.

## 12. Vaccination of children aged 5-11 years

The National Immunisation Advisory Committee (NIAC) advise that **Comirnaty KP.2 10 micrograms (0.3ml) is the preferred vaccine for primary and booster vaccination for those aged 5-11 years.**

Comirnaty KP.2 10 micrograms/dose dispersion for injection is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2, in children aged 5 to 11 years.

### 12.1 NIAC recommendations

#### Recommendations for Primary vaccination of those aged 5-11 years

**OF NOTE:** For information on the primary vaccination schedule, please see Section 5a.5.1 and table 5a.1 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**OF NOTE:** For the primary vaccination dosage and scheduling for those age 5-11 years for Comirnaty KP.2 10 micrograms please see Section 5a.5.1, section 5a.5.3.1.2 and table 5a.1 in chapter 5a of the NIAC Immunisation Guidelines. <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

#### Recommendations for booster vaccination of those aged 5-11 years

**OF NOTE:** For booster vaccination recommendations, please see section 5a.5.2, table 5a.2 and section 5a.5.3.1.2 in chapter 5a NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 12.2 Vaccine storage

#### Comirnaty 10 micrograms/dose dispersion for injection (0.3ml):

- The vaccine is delivered from the manufacturer to the HSE NCCS at -90°C to -60°C and this storage condition is continued as the vaccine is stored in an ULT freezer at -90°C to -60°C.
- The vaccine is supplied to sites/clinics by the HSE NCCS at +2 to +8°C with a shelf life of up to 10 weeks. This new “use before” time and date is labelled by NCCS once vials are removed from ULT.
- Vials have a shelf life of up to 10 weeks when stored at +2 to +8°C (labelled “USE BEFORE” time and date) and up to 12 hours at temperatures between +8 °C and +30 °C.
- After removal from the fridge prior to administration, opened vials must be kept at +2°C to +30°C and used within 12 hours, after which the vial must be discarded
- The vial has a blue cap and is ready to use (does not require dilution).

### Summary of Comirnaty 10 micrograms/dose dispersion for injection (0.3 ml)

Title	Description
Type of vaccine	mRNA
Name of vaccines	Comirnaty KP.2 10 micrograms/dose dispersion for injection
Excipients	((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315) 2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159) 1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC) Cholesterol Trometamol Trometamol hydrochloride Sucrose Water for injections
Presentation	The vaccines are contained in a multi-dose clear vial (type I glass)
Number of doses in each vial	6 doses If a seventh dose of 0.3 ml can be safely and accurately withdrawn from a vial, it is a valid dose
Dilution	<b>DO NOT DILUTE</b>
Dosage	0.3 ml (10 mcg) intramuscularly
Latex	The vial stopper does not contain latex.
Preservatives	None

### Prior to vaccination

- Check valid consent has been obtained
- Check for contraindications or precautions
  - See later in this chapter and the NIAC Immunisation guidelines for COVID-19 available at <https://www.rcpi.ie/healthcare-leadership/niac/immunisation-guidelines-for-ireland>
- Vaccinators who are vaccinating using a medicines protocol should check vaccine recipient's eligibility under the protocol
- Check the interval when administering a second or third dose of the primary schedule for those who are immunocompromised
- Explain the procedure
- Answer questions
- Maintain privacy & dignity

### 12.3 Infection prevention and control

- Prior to preparation and administration of COVID-19 vaccines, hand hygiene should be performed as per the "WHO five moments of hand hygiene" with emphasis on:
  - Before vaccine preparation
  - Before drawing up and administering the vaccine
  - Before and after each recipient contact
- It is not necessary to use gloves for vaccine injections, unless contact with potentially infectious body fluids is possible, or unless the health care worker has an infected lesion on the hand. If gloves are worn, they should be changed for each patient.

- If the skin at the injection site is visibly dirty it should be cleaned with soap and water. There is no need to use a disinfectant e.g. alcohol swabs.
- If an alcohol swab is used, injection should be delayed for  $\geq 30$  seconds, to ensure the alcohol will have evaporated.
- There is no need to routinely check temperature either at registration or before vaccination.
- All vaccinators should follow the Infection Prevention and Control (IPC) precautions and management in line with the latest National Clinical Guideline No. 30 (2023) Infection Prevention and Control (IPC), available at <https://www.gov.ie/en/publication/a057e-infection-prevention-and-control-ipc/>
- Check Health Protection Surveillance Centre (HPSC) website for the latest guidance on infection prevention and control (IPC) for healthcare workers: <https://www.hpsc.ie/a-z/respiratory/coronavirus/novelcoronavirus/guidance/infectionpreventionandcontrolguidance/>

## 12.4 Vaccine preparation

### Comirnaty 10 micrograms/dose dispersion for injection (0.3 ml):

Note: This is a multidose vial with a BLUE cap.

Do NOT dilute prior to use.

- Check the use before date and time on the box containing the vials. Verify that the vial has a blue plastic cap, and the product name is Comirnaty KP.2 10 micrograms/dose dispersion for injection (children 5 to 11 years). If the vial has another product name on the label, please refer to the Summary of Product Characteristics for that formulation.

#### Preparation of 0.3 ml doses:

- Gently mix by inverting vials 10 times prior to use. Do not shake.
- Prior to mixing, the thawed dispersion may contain white to off-white opaque amorphous particles.
- After mixing, the vaccine should present as a clear to slightly opalescent dispersion with no particulates visible. Do not use the vaccine if particulates or discolouration are present.
- Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab.
- Withdraw 0.3 ml of dose.
- Low dead-volume syringes and/or needles should be used in order to extract 6 doses from a single vial. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microlitres. If standard syringes and needles are used, there may not be sufficient volume to extract a sixth dose from a single vial.
- Each dose must contain 0.3 ml of vaccine.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 ml, discard the vial and any excess volume.
- Record the appropriate date/time on the vial. Discard any unused vaccine 12 hours after first puncture.

## 12.5 Vaccine administration

- Administer vaccine to patient intramuscularly, into the deltoid muscle
- Dispose the syringe and the needle into the sharps bin
- Do not leave the empty vials unattended
- Dispose the empty vials safely into a sharps bin
- Low dead space syringes should be used if available in order to maximise the number of doses that can be drawn from the vial
- **There should be no pooling of vaccine** solution from different vials.

## 12.6 Method of IM vaccine administration

- Intramuscular injection technique for children aged 5-11 is the same as for older children and adults
- Vaccine to be given Intramuscularly into the deltoid muscle
- The light triangle in figure indicates site for IM injection into the deltoid muscle

- The upper border of the triangle is approximately two finger-breadths below the acromion process and the apex is at the midpoint of the humerus
- The needle size for IM injection is the same as that for adults (23 gauge / 25 gauge in size and 25mm in length needle )
- At the injection site spread the skin taut between the thumb and forefinger with the non- dominant hand
- Do not bunch up the skin as this leads to administering the vaccine into subcutaneous tissue inadvertently
- Further information is available at [www.immunisation.ie](http://www.immunisation.ie)

## 12.7 Positioning for vaccination

For younger/smaller children:

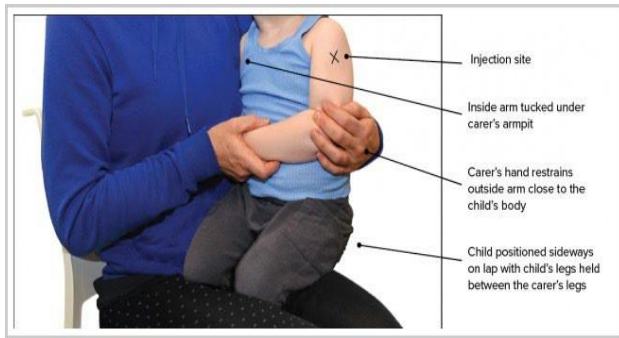

- The child sits on the parent/carer's lap or stands in front of them as they sit
- The parent/carer embraces the child during the process, holding both the child's arms as they do so both of the child's legs are anchored between the parent/carer's thighs

Source: Immunisation guidelines of the NIAC

## Alternative positioning

- Sit child facing to the side. One arm is tucked under the parent/carer's armpit (A cuddle position)

Source: Australian Immunisation handbook

For older/bigger children

- It may be appropriate to ask the parent/carer and the child the preferred sitting position for vaccine administration
- They may prefer to sit on the parent/carer's lap or to sit independently

## 12.8 Techniques for vaccinating children

- Be honest and calm. Take time to explain in simple terms what to expect. Explain that the child may feel a little pinch and it will go away very quickly.
- Use words like "pressure" or "pinch" rather than "pain" or "shot"
- Distraction techniques can help in reducing pain and anxiety during vaccination. Keep the distraction going after the vaccine is given
  - Looking at toys, books, etc.
  - Pointing out interesting things in the room
  - Telling or reading stories
  - Taking deep breaths to help "blow out" the pain
  - Counting to five backwards

## What to do if the child does not want to be vaccinated

- Only one person should hold the child for vaccination at any time (to avoid risk of needle stick injury)
- If the child cannot be held/positioned by the parent/carer so that vaccination is possible, then the child should not be vaccinated
- Repeated attempts to vaccinate the child are unlikely to help
- Check with your clinical lead for advice
- It may be better to bring the child back another time
- With the parent if parent was not present.
- They may benefit from vaccination during quiet times

## Prevention and Management of Syncope in Vaccination Clinics

- Syncope is rare in younger children, it is more common in adolescents
- Syncope episodes mostly occur within 15 minutes of vaccine administration
- Reassurance about the procedure may help to prevent fainting
- Recipients should be seated (or lying down - if past history of fainting) when being administered their vaccines in case of an immediate faint
- There should be facilities in place in case of fainting
- So that the person can be placed in a recumbent position/lie down or sit with head between knees for several minutes if lying down is not possible
- It may be helpful to loosen any tight clothing and apply cool, damp cloths to the person's face and neck
- Further information is available on the [www.immunisation.ie](http://www.immunisation.ie) and at <https://www.hse.ie/eng/health/immunisation/hcpinfo/covid19vaccineinfo4hps/>

## 12.9 Contraindications and precautions to COVID-19 vaccination

**Of Note:** For full list of contraindications and precautions to COVID-19 vaccines in children age 5-11 years see Table 5a.4 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For information on patients planning immunosuppressing therapy, please see section 5a.4.11 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

For further information see Frequently Asked Questions about COVID-19 vaccines for people with pre-existing allergic conditions [www.rcpi.ie](http://www.rcpi.ie)

## 12.10 Post-vaccination procedures

### Documentation post vaccination

- Record vaccine batch number in the record/IT system
- It will automatically link to the expiry date, so there is no need to record the expiry date
- Boxes delivered by NCCS will be labelled with a Use before date and time
- **This use before date and time should be recorded in the patient record**
- Give record card to vaccinee or parent/guardian
- Give the post vaccination information leaflet to vaccinee and parent/guardian

### Observation post-vaccination

- Vaccine recipients: 15 minutes of observation
- Those with a history of mastocytosis: 30 minutes of observation
- Those with immediate itching, swelling or urticarial reaction at the vaccination site: 30 minutes or longer as clinically indicated

### Advice following vaccination

- Give the parent/carer the after-care leaflet information
- Parent/carer should be advised that COVID-19 vaccines may cause a fever which usually resolves within 48 hours. This is a common, expected reaction and isolation and further investigation is not required unless COVID-19 is suspected
- If fever lasts for > 48 hours, or if other symptoms of COVID-19 are present, the person should self-isolate and seek medical advice
- Paracetamol or ibuprofen can be taken after vaccination if the child develops pain, fever or myalgia
- Advise the child's parent/carer that vaccinated children may still get infected and transmit the virus so they should continue to follow all current public health guidance to protect themselves and others
- Please refer to the NIAC immunisation guidelines available at <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

## 12.11 Adverse events

**Of Note:** For Adverse Events –Comirnaty KP.2 10 micrograms for those aged 5-11 years, please see section 5a.5.3.1.2.1 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** Common adverse events are listed in section 5a.5.3.1.2.1 and section 5a.3.1.2.2 in chapter 5a of the NIAC Immunisation guidelines. <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

A full list of adverse reactions may be found in the Summary of Product Characteristics (SmPC) on [www.hpra.ie](http://www.hpra.ie).

### Myocarditis and pericarditis

**Of Note:** For further information on myocarditis and pericarditis, please see section 5a.4.3 (COVID-19 vaccine safety) in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>.

Please see Summary of Product Characteristics (SmPC) for further information on [www.hpra.ie](http://www.hpra.ie)

### Reporting of adverse events following immunisation

Adverse Events Following Immunisation should be reported to the HPRA:

<https://www.hpra.ie/homepage/about-us/report-an-issue/human-adverse-reaction-form>

For further information, please see **section 12.3** of this document: Reporting adverse reactions

## 12.12 Clinical considerations

### Vaccination after COVID-19

**Of Note:** For information on Vaccination after COVID-19, please see section 5a.4.8 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### Co-administration with other vaccines

**Of Note:** For information on co-administration of COVID-19 vaccines with other vaccines please see section 5a.4.6 in chapter 5a NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### Children who are immunocompromised

Children with immunosuppression due to disease or treatment should be vaccinated if they have no contraindications.

**Of Note:** For further information on Immunocompromised children, please see section 5a.4.11 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For primary vaccination schedule recommendations, including optimal and minimal intervals, please see section 5a.5.1, table 5a.1 and section 5a.5.3.1.2 (Comirnaty vaccines for those age 5-11 years) in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For booster vaccine recommendations for children who are immunocompromised, please see section 5a.5.2 and table 5a.2 in chapter 5a of the NIAC Immunisation Guidelines.

### Vaccination of those with bleeding disorders or on anticoagulants

**Of Note:** For information regarding individuals taking anticoagulants, please see section 2.4.6 in chapter 2 of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**[Leadership/NIAC/Immunisation-Guidelines-for-Ireland](https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland)**

**Of Note: Technique for IM injections in persons with bleeding disorders or on anticoagulants**  
**For information regarding technique for IM injections in persons with bleeding disorders or on**  
**Anticoagulants, please see chapter 2 of the NIAC Immunisation Guidelines**  
**<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>**

## 13. Vaccination of children aged 6 months to 4 years:

The National Immunisation Advisory Committee advise that Comirnaty KP.2 3 micrograms/dose concentrate for dispersion for injection is the preferred vaccine for primary and booster vaccination for those aged 6 months to 4 years

The vial has a yellow cap and the dose is 0.3 ml (3 microgram) after dilution.

### 13.1 NIAC recommendations

#### Primary vaccination

For information on the primary vaccination schedule, please see Section 5a.5.1 and table 5a.1 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**OF NOTE:** For the primary vaccination dosage and scheduling for those age 6 months to 4 years for Comirnaty KP.2 3 micrograms please see Section 5a.5.1, section 5a.5.3.1.3 and table 5a.1 in chapter 5a NIAC Immunisation Guidelines.

#### Booster vaccination

**Of Note:** For booster vaccination recommendations, please see section 5a.5.2, table 5a.2 and section 5a.5.3.1.3 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 13.2 Vaccine storage

- From delivery by the manufacturer to the NCCS the vaccine is stored at -90°C to -60°C.
- The vaccine is supplied to sites/clinics by the NCCS at +2°C to +8°C with a shelf life of up to 10 weeks. Vials should be stored in pharmaceutical fridge between +2°C to +8°C. The new “USE BEFORE” date and time is on the “HSE Scan me label” which has been affixed by the NCCS once vials are removed from ULT freezer. Do not refreeze vials. The vaccine in each multi-dose vial requires dilution with 1.1 ml of 0.9% sodium chloride.
- 0.9% sodium chloride is supplied separately to the vaccine and should be stored at room temperature.
- Undiluted vials of Comirnaty KP.2 for 6 months to 4 years (Yellow Cap) have a shelf life of up to 10 weeks when between +2°C to +8°C. Prior to use, the unopened vials can be stored for up to 12 hours at temperatures between +8 °C and +30 °C.
- After dilution, the vaccine must be kept at +2°C to +30°C and used within 12 hours, after which the vial must be discarded.

### Summary of Comirnaty 3 micrograms (0.3ml)

Title	Description
Type of vaccine	mRNA
Name of vaccines	Comirnaty KP.2 3 micrograms/dose concentrate for dispersion for injection.
Constituents	((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate) (ALC-0315) 2-[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide (ALC-0159) 1,2-Distearoyl-sn-glycero-3-phosphocholine (DSPC) Cholesterol Trometamol Trometamol hydrochloride Sucrose Water for injections
Number of doses in each vial	Post-dilution 3 doses If more than 3 doses can be accurately withdrawn from a diluted vial, it is a valid dose.
Dilution	<b>Yes, dilute with 0.9% sodium chloride (supplied separately).</b>
Latex	The vial stopper does not contain latex.
Preservatives	No
Dosage	0.3 ml
Number of doses required and interval between doses	Please see chapter 5a for further information. <a href="https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland">https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland</a>

### 13.3 Vaccine dose

Comirnaty KP.2 vaccine for infants and children aged 6 months to 4 years contains a lower dose of antigen (3 micrograms per dose) than for other age groups. The dose of the diluted vaccine is 0.3 ml.

If a child becomes five years of age before completion of the recommended schedule for those aged 6 months-4 years, the schedule should be completed with the age appropriate dose, Comirnaty KP.2 10 micrograms.

Please see chapter 5a NIAC Immunisation Guidelines for further information.

<https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 13.4 Prior to vaccination

- Check valid consent has been obtained from a parent of legal guardian.
- Check for contraindications or precautions
  - See later in this chapter and the NIAC Immunisation guidelines for COVID-19 available at [NIAC Immunisation Guidelines. Chapter 05a. COVID-19 | Royal College of Physicians of Ireland \(preservica.com\)](https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland)
- Vaccinators who are vaccinating using a medicines protocol should check vaccine recipient's eligibility under the protocol
- Check the interval when administering a second or third dose in the primary schedule for immunocompromised patients
- Explain the procedure
- Answer questions

- Maintain privacy and dignity

### 13.5 Consumables needed

Low dead-volume syringes and/or needles are recommended. The low dead-volume syringe and needle combination should have a dead volume of no more than 35 microlitres.

- For dilution- 3ml syringes should be used and needle (length and size) 25 mm ,23-25 gauge (21 gauge or narrower needle)
- For administration- 1ml syringes should be used and needle (length and size) 25 mm ,23-25 gauge

Ampoules of Sodium Chloride 0.9% Solution for Injection will also be required. You will need 1.1 ml of Sodium Chloride (0.9%) to dilute every vial

### 13.6 Infection prevention and control

- Prior to preparation and administration of COVID-19 vaccines, hand hygiene should be performed as per the “WHO five moments of hand hygiene” with emphasis on:
  - Before vaccine preparation
  - Before drawing up and administering the vaccine
  - Before and after each recipient contact
- It is not necessary to use gloves for vaccine injections, unless contact with potentially infectious body fluids is possible, or unless the health care worker has an infected lesion on the hand. If gloves are worn, they should be changed for each patient.
- If the skin at the injection site is visibly dirty it should be cleaned with soap and water. There is no need to use a disinfectant e.g. alcohol swabs.
- If an alcohol swab is used, injection should be delayed for ≥30 seconds, to ensure the alcohol will have evaporated.
- There is no need to routinely check temperature either at registration or before vaccination.
- All vaccinators should follow the Infection Prevention and Control (IPC) precautions and management in line with the latest National Clinical Guideline No. 30 (2023) Infection Prevention and Control (IPC), available at <https://www.gov.ie/en/publication/a057e-infection-prevention-and-control-ipc/>
- Check Health Protection Surveillance Centre (HPSC) website for the latest guidance on infection prevention and control (IPC) for healthcare workers: <https://www.hpsc.ie/a-z/respiratory/coronavirus/novelcoronavirus/guidance/infectionpreventionandcontrolguidance/>

### Vaccine Dilution and Preparation for Administration

- Check “Use before” date and time on the vaccine box.
- Verify that the vial has a yellow plastic cap and the product name is Comirnaty KP.2 3 micrograms/dose concentrate for dispersion for injection (infants and children 6 months to 4 years).
- If the vial has another product name on the label, or a different cap colour, please make reference to the Summary of Product Characteristics for that formulation.

#### Dilution

- Allow the vial to come to room temperature and gently invert it 10 times prior to dilution Do not shake.
- Prior to dilution, the thawed dispersion may contain white to off-white opaque amorphous particles.
- Vaccine must be diluted in its original vial with 1.1 ml sodium chloride 9 mg/ml (0.9%) solution for injection, using a 21 gauge or narrower needle and aseptic techniques.
- Equalise vial pressure before removing the needle from the vial stopper by withdrawing 1.1 ml air into the empty diluent syringe.
- Gently invert the diluted dispersion 10 times. Do not shake.

- The diluted vaccine should present as a white to off-white dispersion with no particulates visible. Do not use the diluted vaccine if particulates or discolouration are present.
- The diluted vials should be marked with the appropriate discard date and time.
- After dilution, store at +2 °C to +30 °C and use within 12 hours.
- Do not freeze or shake the diluted dispersion. If refrigerated, allow the diluted dispersion to come to room temperature prior to use.

#### **Preparation of 0.3ml doses**

- After dilution, the vial contains 1.58 ml from which 3 doses of 0.3 ml can be extracted.
- Using aseptic technique, cleanse the vial stopper with a single-use antiseptic swab.
- Withdraw 0.3 ml of Comirnaty KP.2 for infants and children aged 6 months to 4 years. Standard syringes and/or needles can be used in order to extract 3 doses from a single vial.
- Each dose must contain 0.3 ml of vaccine.
- If the amount of vaccine remaining in the vial cannot provide a full dose of 0.3 ml, discard the vial and any excess volume.
- Discard any unused vaccine within 12 hours after dilution.

### **13.7 Vaccine administration**

#### **Method of IM Vaccine Administration**

- Intramuscular injection technique is to be used
  - For infants aged 6 months to 11 months, the recommended injection site is the vastus lateralis muscle (anterolateral aspect of the thigh).
  - For children aged 1 year to 3 years of age, either the deltoid muscle or the vastus lateralis muscle (anterolateral aspect of the thigh) can be used as the injection site.
  - For children aged 3 years and older, the recommended injection site is the deltoid muscle.
- Dispose the syringe and the needle into the sharps bin
- Do not leave the empty vials unattended
- Dispose of the empty vials safely into a sharps bin
- Low dead space syringes and needles should be used if available in order to maximise the number of doses that can be drawn from the vial
- There should be no pooling of vaccine solution from different vials

#### IM injection into the deltoid muscle

- The light triangle in the below figure indicates the site for IM injection into the deltoid muscle. The upper border of the triangle is approximately two finger-breadths / 2.5cms below the acromion process and the apex is at the midpoint of the humerus.

Figure 8: IM injection site into the deltoid muscle

#### IM injection site is the Vastus lateralis muscle

- The vastus lateralis muscle is located on the anterolateral aspect of the thigh, from one of the patient's hand breadths below the greater trochanter to one hand's breath above the knee. The middle third of the muscle is the site for injections. The width of the injection site extends from the mid-line of the thigh anteriorly to the mid-line of the outer thigh.
- The injection site is the middle third of the Vastus lateralis, in the anterolateral thigh (shaded area)

Figure 9: IM injection site into the middle third of the vastus lateralis

- At the injection site (whether using deltoid or vastus lateralis), spread the skin taut between the thumb and forefinger with the non-dominant hand. Do not bunch up the skin as this leads to administering the vaccine into subcutaneous tissue inadvertently.
- Further information is available at [NIAC Immunisation Guidelines. Chapter 02. General immunisation procedures | Royal College of Physicians of Ireland \(preservica.com\)](https://www.preservica.com/niac-immunisation-guidelines)

#### **Positioning for vaccination**

For infants:

- Sit the infant on parent/guardian's lap, facing to the side.
- One arm is tucked under the parent/guardian's armpit (cuddle position). The infant's other arm is held in the parent/guardian's arms.
- Both of the infant's legs are anchored between the parent/guardian's thighs

Figure 10: Positioning of infants (*Source: Australian Immunisation handbook*)

For older children:

- The child sits on the parent/guardian's lap or stands in front of them while the parent/guardian is sitting
- The parent/guardian embraces the child during the process, holding both the child's arms as they do so both of the child's legs are anchored between the parent/guardian's thighs
- Some children may prefer to sit on the guardian/parent's lap or sit independently
- Alternatively, the positioning for infants may also be used

Figure 11: Positioning for older children (*Source: Immunisation Guidelines of the National Immunisation Advisory Committee*)

### Techniques for vaccinating children

- Be honest and calm. Take time to explain in simple terms what to expect. Explain that the child may feel a little pinch and it will go away very quickly.
- Use words like “pressure” or “pinch” rather than “pain” or “shot”
- Distraction techniques can help in reducing pain and anxiety during vaccination. If possible, keep the distraction going after the vaccine is given.
  - Looking at toys, books, etc.
  - Pointing out interesting things in the room
  - Telling or reading stories
  - Taking deep breaths to help “blow out” the pain
  - Counting from 5 backwards

### What to do if the child does not want to be vaccinated

- Only one person should hold the child for vaccination at any time (to minimise risk of needle stick injury)
- If the child cannot be held/positioned by the parent/carer so that vaccination is possible, then the child should not be vaccinated
- Repeated attempts to vaccinate the child are unlikely to help
- Check with your clinical lead for advice
- It may be better to bring the child back another time with a parent/guardian if they were not present
- They may benefit from vaccination during quiet times

### Prevention and Management of Syncope in Vaccination Clinics

- Syncope is rare in babies and young children; it is more common in adolescents
- Syncope episodes mostly occur within 15 minutes of vaccine administration
- Reassurance about the procedure may help to prevent fainting
- Recipients should be seated (or lying down, if past history of fainting) when being administered their vaccines in case of an immediate faint
- There should be facilities in place in case of fainting
  - So that the patient can be placed in a recumbent position/lie down or sit with head between knees for several minutes if lying down is not possible
- It may be helpful to loosen any tight clothing and apply cool, damp cloths to the person's face and neck
- Further information is available at [www.immunisation.ie](http://www.immunisation.ie) and at <https://www.hse.ie/eng/health/immunisation/hcpinfo/covid19vaccineinfo4hps/>

### 13.8 Contraindications and precautions to COVID-19 vaccination

**Of Note:** For full list of contraindications and precautions to COVID-19 vaccines in children age 6 months to 4 years see Table 5a.4 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For information on patients planning immunosuppressing therapy, please see section 5a.4.11 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

**Of Note:** For further information see Frequently Asked Questions about COVID-19 vaccines for people with pre-existing allergic conditions please see <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Hot-topics-and-resources/Hot-topics-and-general-resources>

### 13.9 Post-vaccination procedures

#### Documentation post-vaccination

- Record vaccine batch number in the record/IT system
  - It will automatically link to the expiry date, so there is no need to record the expiry date
- Boxes delivered by NCCS will be labelled with a “use before” date and time
- This “use before” date and time should be recorded in the patient record
- Give the record card to the parent/guardian

#### Observation post-vaccination

- Vaccine recipients: 15 minutes of observation
- Those with a history of mastocytosis: 30 minutes of observation
- Those with immediate itching, swelling or urticarial reaction at the vaccination site: 30 minutes or longer as clinically indicated

### Advice following vaccination

- Parent/guardian should be advised that COVID-19 vaccines may cause a fever which usually resolves within 48 hours. This is a common, expected reaction and isolation and further investigation is not required unless COVID-19 is suspected.
- If fever lasts for >48 hours, or if other symptoms of COVID-19 are present, the person should self-isolate and seek medical advice
- Paracetamol or ibuprofen can be taken after vaccination if the child develops pain, fever, or myalgia
- Advise the child's parent/guardian that vaccinated children may still get infected and transmit the virus so they should continue to follow all current public health guidance to protect themselves and others
- Please refer to the NIAC immunisation guidelines available at <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### 13.10 Adverse events

**Of Note:** For information on adverse events for Comirnaty KP.2 3 micrograms vaccines for those aged 6 months to 4 years, please see section 5a.5.3.1.3.1 and section 5a.3.1.3.2 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

A full list of adverse reactions may be found in the Summary of Product Characteristics (SmPC) on [www.hpra.ie](http://www.hpra.ie).

### Myocarditis and pericarditis

**Of Note:** For further information on myocarditis and pericarditis, please see section 5a.4.3 and section 5a.5.3.1.3.2 (COVID-19 vaccine safety) in chapter 5a NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>.

Please see Summary of Product Characteristics (SmPC) for further information on [www.hpra.ie](http://www.hpra.ie)

### Reporting of adverse events following immunisation

Healthcare professionals are asked to report any suspected adverse reactions to the HPRA. <https://www.hpra.ie/homepage/about-us/report-an-issue/human-adverse-reaction-form>

For further information, please see **section 12.3** of this document: Reporting adverse reactions

### 13.11 Clinical considerations

#### Vaccination after COVID-19

**Of Note:** For information on Vaccination after COVID-19, please see section 5a.4.8 in chapter 5a NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

#### Co-administration with other vaccines

**Of Note:** For information on co-administration of COVID-19 vaccines with other vaccines please see section 5a.4.6 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>

### Children who are immunocompromised

Children with immunosuppression due to disease or treatment should be vaccinated if they have no contraindications. **Of Note: For further information on Immunocompromised children, please see section 5a.4.11 in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>**

**Of Note: Primary course for those with immunosuppression due to disease or treatment aged 5-11 years**

**For primary vaccination schedule recommendations, including optimal and minimal intervals, please see section 5a.5.1, table 5a.1 and section 5a.5.3.1.3 (Comirnaty vaccines for those age 6 months to 4 years) in chapter 5a of the NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>**

**Of Note: For booster vaccine recommendations for children who are immunocompromised, please see section 5a.5.2 and table 5a.2 in chapter 5a NIAC Immunisation Guidelines.**

### Vaccination of those with bleeding disorders or on anticoagulants

**Of Note: For information regarding individuals with bleeding disorders, please see section 2.4.6 in chapter 2 NIAC Immunisation Guidelines <https://www.rcpi.ie/Healthcare-Leadership/NIAC/Immunisation-Guidelines-for-Ireland>**
