

## **Guidance for management of Comirnaty (Pfizer/BioNTech) COVID-19 mRNA Vaccine from time of delivery at sites up to the time of administration.**

**This document contains two sections:**

**Section 1 contains general information for all Comirnaty presentations**

- 1. Background**
- 2. Responsibilities**
- 3. Scope**
- 4. Purpose**
- 5. Consumables, Patient Information Leaflet (PIL) & Record Cards and Other Equipment**
- 6. Health & Safety**

**Section 2 contains 3 appendices with specific details pertaining to each vaccine product.**

- i. Appendix 1 refers to vaccine for 12 years and older.**
  - 1. Comirnaty JN.1 30 micrograms/dose dispersion for injection –Ready to Use (RTU) – Grey cap**
  
- ii. Appendix 2 refers to vaccine for children aged 5-11 years.**
  - 2. Comirnaty JN.1 10 micrograms/dose dispersion for injection- Ready to Use (RTU) – Blue cap**
  
- iii. Appendix 3 refers to vaccine for infants and children aged 6 months to 4 years.**
  - 3. Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection - Requires Dilution – Yellow cap**

This document is under regular review and is updated when relevant new information becomes available.  
Please check [www.immunisation.ie](http://www.immunisation.ie) for the current version.

## 1. Background

Comirnaty COVID-19 Vaccines are delivered by HSE National Cold Chain Service (NCCS) at a temperature of +2 °C to +8 °C, and therefore in a thawed state. The NCCS will update the expiry date and affix a “HSE SCAN ME” label detailing the new reduced shelf life (= USE BEFORE date and time). Do not re-freeze.

Comirnaty formulations (GREY, BLUE and YELLOW caps) have a number of specifications in common. All products are multidose vials and contain Trometamol.

Additional information about the vaccination programme is available in the Clinical Guidance for COVID-19 Vaccination document available at [www.immunisation.ie](http://www.immunisation.ie).

All SPCs are accessible at:

<https://www.medicines.ie/medicines/list/all/page-1/per-page-25?query=comirnaty>

## 2. Responsibilities

The Responsible Person should ensure that Comirnaty COVID- 19 vaccines are managed as outlined in this guidance document.

## 3. Scope

The scope of this document is to provide a set of standardised procedures for the management of Comirnaty COVID- 19 vaccines at all vaccination sites

## 4. Purpose

The purpose of this document is to outline the management of Comirnaty vaccines and to provide supporting guidance in relation to:

- Receipt of vaccine
- Vaccine decommissioning
- Shelf-life
- Storage and transportation
- Presentation and preparation
- Consumables, Patient Information Leaflet (PIL) & record cards and other equipment
- Stock control, security & monitoring of wastage
- Health and safety

The documents provided may be used as templates to be adapted for local use, or may be used as reference sources to check that existing local procedures are robust and comprehensive.

### 4.1 Receipt of vaccines

- Upon arrival at the site record the maximum, minimum and current temperature of the fridge(s), and reset after recording.
- Prior to receipt of vaccine delivery, ensure the temperature is between +2 °C and +8 °C.
- Sign for receipt of the vaccines. Vaccines will be at a temperature of +2 °C to +8 °C when delivered by the NCCS.

- Check against the delivery docket (note: the expiry date on the docket may differ to printed expiry on carton and vial- the delivery docket carries the updated and correct expiry date).
- Scan or record the details of the HSE SCAN ME label and immediately place the vaccines (retained in original boxes to protect vials from light) in the fridge.

For additional information please see the following document:

<https://www.hse.ie/eng/health/immunisation/hcpinfo/vaccineordering/sopnio01.pdf>

### 4.2 Vaccine Decommissioning

All boxes have been re-labelled and decommissioned by the NCCS.

### 4.3 Shelf-Life

#### 4.3.1 Expiry date:

Comirnaty JN.1 formulations have a shelf life of 18 months when stored in ULT freezers (-90 °C to -60 °C).

#### 4.3.2 USE BEFORE date and time

The USE BEFORE date and time reflects the duration the unopened vial can be stored at +2 °C to +8 °C, which is **up to 10 weeks**. All boxes containing Comirnaty will be labelled by the NCCS with a USE BEFORE date and time label.

The USE BEFORE date and time specified on the label indicates the time by which the vial must be used, irrespective of the expiry date on box or vial.

Record the USE BEFORE date in the patient's record and on COVAX.

#### 4.3.3 DISCARD date and time

Discard date and time must be written on the vial once the vial is initially punctured. This is calculated by adding **12 hours** to the time of first puncture. The vaccine can be stored at temperature between +2 °C and +30 °C during this period.

From a microbiological perspective, unless the method of opening precludes the risks of microbial contamination, the product should be used immediately. If not used immediately, in-use storage times and conditions are the responsibility of the user.

**NOTE:** The discard time cannot exceed the USE BEFORE date and time. If the time remaining between first puncture and USE BEFORE date and time is less than the allowed discard time of 12 hours, then the

discard time must reflect the USE BEFORE date and time. All doses must be administered before the USE BEFORE date and time or else doses must be discarded.

### 4.4 Storage & Transportation

During storage, minimise exposure to room light, and avoid exposure to direct sunlight and ultraviolet light. Vials can be handled in room light conditions.

An appropriate container should be used for transportation to minimize the potential for vials to be jostled. If vials are inadvertently bumped or dropped, they should be returned to the upright position, however the risk to the product is minimal and vials which are dropped may still be used.

Unopened vials can be stored and transported for 10 weeks at +2 °C to +8 °C within USE BEFORE date and time). Unopened vials can be stored for 12 hours prior to first puncture at room temperature (+8 °C to +30 °C)

Vials can be stored for 12 hours after first puncture or dilution, at temperature between +2 °C and +30 °C, which includes up to 6 hours transportation time.

The following information is intended to guide healthcare professionals only in case of temporary temperature excursion:

*Stability data indicate that the unopened vial is stable for up to 10 weeks when stored at temperatures from -2 °C to 2 °C, within the 10-week storage period between +2 °C and +8 °C and up to 24 hours at temperatures of +8 °C to +30 °C, including up to 12 hours following first puncture.*

### 4.5 Presentation and Preparation

All formulations are packed in original boxes of 10 vials.

- Vial of Comirnaty JN.1 30 micrograms/dose dispersion for injection (**GREY cap**) contain six doses
- Vial of Comirnaty JN.1 10 micrograms/dose dispersion for injection (**BLUE cap**) contain six doses
- Vial of Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection (**YELLOW cap**) contain three doses (after dilution)

Vial verification is essential.

- **Comirnaty JN.1 30 micrograms/dose dispersion for injection –Ready to Use (RTU) – GREY cap**
- **Comirnaty JN.1 10 micrograms/dose dispersion for injection –Ready to Use (RTU) – BLUE cap**
- **Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection – Requires Dilution – YELLOW cap**

Preparation: **c.f. Individual Presentation Appendices 1 to 3**

Where diluent is required, only Sodium chloride (0.9%) for injection is to be used. Bacteriostatic saline or other diluents must **NOT** be used.

Do not pool excess vaccine from multiple vials.

The vaccine should not be mixed in the same syringe with any other vaccines or medicinal products.

The preferred injection site is the deltoid muscle of the upper arm (except in infants).

Do not inject the vaccine intravascularly, subcutaneously or intradermally.

## 5. Consumables, Patient Information Leaflet (PIL) & record cards and other equipment

A national distribution service will provide all necessary supplies to handle, prepare and administer the vaccine, including PPE and critical clinical and non-clinical consumables. These are not included in this SOP.

Other equipment includes:

**Anaphylaxis Kits:** Refer to National Immunisation Advisory Committee guidelines at

[https://rcpi.access.preservica.com/uncategorized/IO\\_a36f9e4b-4c80-432d-8264-546089359925/](https://rcpi.access.preservica.com/uncategorized/IO_a36f9e4b-4c80-432d-8264-546089359925/)

The adrenaline will be provided by a pre-determined community/ hospital pharmacy as agreed at a local level.

**Storage Equipment:** A pharmaceutical fridge must be used to store vaccines. The fridge should be set to maintain the temperature at +5 °C +/- 3 °C, and alarms should take into account the need to maintain the temperature above +2 °C and less than +8 °C.

Fridges should be validated and monitored in accordance with existing local procedures.

## 6. Stock Control, Security & Monitoring of Wastage

A physical stock count of COVID-19 vaccine vials should be completed and it should match the stock count recorded on the IT system.

Sites must ensure that vaccines are stored securely at all points between receipt and use or disposal.

All waste must be handled in such a way as to prevent theft and /or misuse, both on site and after removal from the site.

**Unopened vials (in original cartons) must be returned to NCCS for destruction** following the routine protocol for all expired /damaged vaccines.

Dispose of empty or partial empty vials into sharps bins safely as per health care management policy.

Dispose of syringes and needles into sharps bins according to normal local waste management procedures.

Original cartons must have their labels defaced using permanent black marker pens, and be placed into appropriate waste sacks for disposal, as soon as possible after they become empty.

## 7. Health & Safety

There are no special handling requirements for routine handling and dealing with spillages of Comirnaty COVID-19 vaccine.

Health and safety risk assessments should be undertaken locally to ensure these risks are adequately controlled.

## Appendix 1

### Comirnaty JN.1 30 micrograms/dose micrograms/dose dispersion for injection, RTU – Grey cap. (12 years and older)

- a. Comirnaty JN.1 30 micrograms/dose dispersion for injection is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2, in individuals 12 years of age and older.
- b. One dose (0.3 mL) contains 30 micrograms of brexovimeran, a COVID-19 mRNA Vaccine (nucleoside modified, embedded in lipid nanoparticles).
- c. Verify that the vial has a grey plastic cap and the product name is Comirnaty JN.1 30 micrograms/dose dispersion for injection (12 years and older).

The following is applicable to Comirnaty JN.1 30 micrograms/dose dispersion for injection:

- The vaccine is Ready To Use- DO NOT DILUTE.
- The vaccine does not contain preservative and is provided as a multiple dose vial.
- Excipients include Trometamol and Trometamol hydrochloride.
- Each vial contains 6 doses.
- Each dose is 0.3ml.
- Do not pool excess vaccine from multiple vials.

#### Preparation:

#### **Verify that the vial has a grey plastic cap**

- a. Gently mix by inverting vials 10 times prior to use. Do not shake.
- b. Prior to mixing, the thawed dispersion may contain white to off-white opaque amorphous particles.
- c. After mixing, the vaccine should present as a white to off-white dispersion with no particulates visible.
- d. Do not use the vaccine if particulates or discolouration is present.
- e. **DO NOT DILUTE** prior to use.
- f. One vial contains 6 doses of **0.3 ml** (low dead-volume syringes and/or needles should be used)
- g. Each dose must contain **0.3 ml** of vaccine, if the amount of vaccine remaining in the vial after 6 doses withdrawn, can provide a full dose of **0.3 ml**, this is a valid dose
- h. Discard the vial and any excess volume in sharps bin
- i. May be stored at room temperature (+8 °C to +30 °C) for a total of 12 hours prior to the first puncture.
- j. After first puncture, the vial should be stored between +2 °C to +30 °C.
- k. Record the appropriate discard date/time on the vial.
- l. Vials should be discarded 12 hours after the first puncture.
- m. During storage, minimise exposure to room light, and avoid exposure to direct sunlight and ultraviolet light.
- n. Do not refreeze thawed vials.

## Appendix 2

### Comirnaty JN.1 10 micrograms/dose dispersion for injection –Ready to Use (RTU) – BLUE cap (5-11 years)

- a. Comirnaty JN.1 10 micrograms/dose dispersion for injection is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2, in children aged 5 to 11 years.
- b. One dose (0.3 ml) contains 10 micrograms of betovamernan, a COVID-19 mRNA Vaccine (nucleoside modified, embedded in lipid nanoparticles).
- c. Verify that the vial has a blue plastic cap and the product name is Comirnaty JN.1 10 micrograms/dose dispersion for injection (children 5 to 11 years).

#### The following is applicable to Comirnaty JN.1 10 micrograms/dose dispersion for injection:

- The vaccine is Ready To Use- DO NOT DILUTE.
- The vaccine does not contain preservative and is provided as a multiple dose vial.
- Excipients include Trometamol and Trometamol hydrochloride.
- Each vial contains 6 doses.
- Each dose is 0.3ml.
- Do not pool excess vaccine from multiple vials.

#### Preparation:

##### **Verify that the vial has a blue plastic cap**

- a. Gently mix by inverting vials 10 times prior to use. Do not shake.
- b. Prior to mixing, the thawed dispersion may contain white to off-white opaque amorphous particles.
- c. After mixing, the vaccine should present as a clear to slightly opalescent dispersion with no particulates visible.
- d. Do not use the vaccine if particulates or discolouration are present.
- e. DO NOT DILUTE prior to use.
- f. One vial contains 6 doses of 0.3 ml (low dead-volume syringes and/or needles should be used)
- g. Each dose must contain 0.3 ml of vaccine, if the amount of vaccine remaining in the vial after 6 doses withdrawn, can provide a full dose of 0.3 ml, this is a valid dose
- h. Discard the vial and any excess volume in sharps bin
- i. May be stored at room temperature (+8 °C to +30 °C) for a total of 12 hours prior to the first puncture.
- j. After first puncture, the vial should be stored between +2 °C to +30 °C.
- k. Record the appropriate discard date/time on the vial.
- l. Vials should be discarded 12 hours after the first puncture.
- m. During storage, minimise exposure to room light, and avoid exposure to direct sunlight and ultraviolet light.
- n. Do not refreeze thawed vials.

### Appendix 3

#### Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection–YELLOW cap- (Infants and Children aged 6 months- 4 years)

- a. Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection is indicated for active immunisation to prevent COVID-19 caused by SARS-CoV-2, in infants and children aged 6 months to 4 years.
- b. One vial (0.48 ml) contains 3 doses of 0.3 ml, after dilution with 1.1ml of NaCl 0.9% solution for injection. One dose (0.3 ml) contains 3 micrograms of bretovameran, a COVID-19 mRNA Vaccine (nucleoside modified, embedded in lipid nanoparticles).
- c. Verify that the vial has a yellow plastic cap and the product name is Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection (infants and children 6 months to 4 years).

#### **The following is applicable to Comirnaty JN.1 3 micrograms/dose concentrate for dispersion for injection:**

- The vaccine does not contain preservative and is provided as a multiple dose vial
- Excipients include Trometamol and Trometamol hydrochloride.
- Each vial contains 3 doses
- Each dose is 0.3 ml
- Do not pool excess vaccine from multiple vials.

#### Preparation:

#### **Verify that the vial has a yellow plastic cap.**

- a. Allow the vial to come to room temperature and gently invert it 10 times prior to dilution. Do not shake.
- b. Prior to dilution, the dispersion may contain white to off-white opaque amorphous particles.
- c. The vaccine must be diluted in its original vial with 1.1 ml sodium chloride 9 mg/ml (0.9%) solution for injection, using a 21 gauge or narrower needle and aseptic techniques. **Do not add more than 1.1 ml of diluent**

**IMPORTANT:** regardless of the volume of the diluent vial, it must be used for ONE TIME dilution only (after withdrawal, the remaining diluent must be discarded)

- d. Equalise vial pressure before removing the needle from the vial stopper by withdrawing 1.1 ml air into the empty diluent syringe.
- e. Gently invert the diluted dispersion 10 times. Do not shake.
- f. The diluted vaccine should present as a white to off-white dispersion with no particulates visible. Do not use the diluted vaccine if particulates or discolouration are present.
- g. The diluted vials should be marked with the appropriate discard date and time.
- h. After dilution, store at 2 °C to 30 °C and use within 12 hours.
- i. Do not freeze or shake the diluted dispersion. If refrigerated, allow the diluted dispersion to come to room temperature prior to use.
- j. After dilution, the vial contains 1.58 ml from which 3 doses of 0.3 ml can be extracted.
- k. Each dose must contain **0.3 ml** of vaccine, if the amount of vaccine remaining in the vial after 3 doses withdrawn, can provide a full dose of **0.3 ml**, this is a valid dose
- l. Discard any unused vaccine within 12 hours after dilution.
