Surgical antibiotic prophylaxis duration

www.bit.ly/3eGoCKw

Professor Martin Cormican, National Clinical Lead, AMRIC
Marie Philbin, Chief Pharmacist, AMRIC
10th December 2021
Invite for the webinar has been extended to:

- Anyone involved in the use of Surgical Antibiotic Prophylaxis
  - **Prescribes** – Surgeons, Obstetricians, Gynaecologists, Anaesthetists, Cardiologists
  - **Dispenses** – Pharmacy Staff
  - **Administers** – Nurses
- **Infection Specialists** – Consultant Microbiologists, Infectious Diseases Physicians, Antimicrobial Pharmacists
- **Quality & Patient Safety** Staff

- We would like you to welcome you all here today
Structure of the webinar

• Background/rationale for this work

• AMRIC/NCPS joint position statement on surgical antibiotic prophylaxis duration

• Audit tool

• Supporting materials
Some background as to the rationale for the work
• Surgical antibiotic prophylaxis is a critical step in preventing surgical site infection.

• Maximum benefit with the least harm is achieved by:
  • Administering the right agent, at the right dose, at the right time and for the right duration.

• In terms of duration most procedures only require a single dose of surgical antibiotic prophylaxis to reduce the risk of a surgical site infection (SSI).
  • Extended duration of surgical antibiotic prophylaxis is not associated with further reduction in risk of SSI.
  • There is evidence of harm such as acute kidney injury and *Clostridioides difficile* infection with extended duration.

---

**Association of Duration and Type of Surgical Prophylaxis With Antimicrobial-Associated Adverse Events**

Westyn Branch-Ellman, MD, MSc; William O’Brien, MS; Judith Strymski, MD; Kamal Itani, MD; Christine Wyatt, MD; Kalpana Supra, MD, MPH

**CONCLUSIONS AND RELEVANCE:** Increasing duration of antimicrobial prophylaxis was associated with higher odds of AKI and *C. difficile* infection in a duration-dependent fashion; extended duration did not lead to additional SSIs reduction. These findings highlight the notion that every day matters and suggest that stewardship efforts to limit duration of prophylaxis have the potential to reduce adverse events without increasing SSI.
• 2020 national antimicrobial point prevalence study showed 62% of cases exceeded a single dose

• 2017 European Study showed Scotland only 35% of cases exceeded a single dose

• Scope for improvement

• Development of position statement & associated resources to assist in that improvement
The position statement
• Position statement on duration of antibiotic prophylaxis in surgery

• Developed jointly by National Clinical Programme for Surgery (NCPS) & HSE antimicrobial resistance and infection control team (AMRIC)

• Review & feedback provided by:
  • The Royal College of Surgeons of Ireland
  • The College of Anaesthesiologists
  • The Institute of Obstetrics & Gynaecologists
  • HSE National Clinical Programmes for Anaesthesia, Women & Infants, Heart, and, Trauma & Orthopaedics.
  • Irish Society of Clinical Microbiologists
  • Infectious Diseases Society of Ireland
  • Irish Antimicrobial Pharmacists Group
  • HSE Antimicrobial Stewardship Advisory Group

• Consensus of expert opinion supported by all key stakeholders
• Recommendations
  • Maximum durations of surgical antibiotic prophylaxis depending on the type of surgery
  • Supported by evidence

• Durations
  • **Most procedures do not require post-operative antibiotics**
  • Otherwise depending on type of procedure
    • Maximum of 24 hours
    • Maximum of 48 hours
  • Locally agreed maximum may be less than this
• Taking account of evidence & expert opinion a duration greater than 48 hours cannot be reasonably justified.

• Applicable to both parenteral & oral routes.

• Antibiotic prophylaxis should not be continued beyond the limits specified even if drains remain in place.
• Treatment is **NOT** prophylaxis

• If infection is suspected or confirmed pre-op/intra-op/post-op then the model of antibiotic prophylaxis is no longer applicable.

• Treatment agent & duration as per local prescribing guidelines or infection specialist advice.
Suggestions/resources to progress implementation of the recommendations from the position paper
National collaborative working group – NCPS & HSE AMRIC

- Developed a suite of resources to assess in implementation of the position statement

- Professor Martin Cormican, National Clinical Lead, AMRIC
- Professor Debbie McNamara, National Clinical Lead, NCPS
- Dr Sinéad O’Donnell, Consultant Microbiologist Beaumont Hospital
- Ciara Hughes, Programme Manager, NCPS
- Therese Dalchan, GM for AMRIC in HSE Acute Operations
- Audrey Lambourn, Communications Manager, AMRIC
- Marie Philbin, Chief Pharmacist, AMRIC
Audit

- Audit will fulfil audit requirement.

- Audit data is to support quality improvement, there is no reporting requirement associated with its use
  - A sample process: audit 10 consecutive patient discharges within a single speciality.

- Audit tool available and a video to guide you through the use of the tool

- If access to a PC is limited download Microsoft Office/ Microsoft Excel to smartphone to allow completion on such a device.

Audit – experience of a Model 4 hospital

- Audit to establish a baseline using local surgical antibiotic prophylaxis guidelines (recommended duration is shorter for some surgeries)
- 60 surgical patients audited – across all surgical specialities
- 94% of patients were prescribed surgical antibiotic prophylaxis
- Surgical antibiotic prophylaxis duration was compliant with local guidelines in 60%
- Tool was easy to use – would be nicer in an App format
Audit – experience of a Model 4 hospital

Initial Actions taken based on audit results

- Position statement circulated to all surgical team members
- Results fed back to clinical directorates and presented at grand rounds – there was a lot of interest at Grand Rounds

If any of you have experiences to share I can add anonymously to the webpage
Cumulative Audit Analysis of % of Patients Where Antibiotics were Used for the Recommended Duration or Less

The aim of this run chart is to visually demonstrate the trend over time of the percentage of patients where antibiotics were used for the recommended duration or less. The run chart will assist in the impact assessment of interventions employed. This run chart should be added to after each audit.

To complete this cumulative audit analysis:
1. From each audit, retrieve the following Information:
   A) the date the audit was carried out
   B) the percentage of times you answered “Yes” to Question 7 ‘Were antibiotics given for less than or equal to the recommended duration?’ This figure is retrieved from Graph 3 on the ‘Analysis’ sheet of each audit.
   C) Include in the 3rd column of the table below, the main intervention(s) used for that period or specify it was a baseline audit etc.
2. Enter the dates and corresponding % Yes to Q7 chronologically in the table below.
3. Once this information has been entered, the graphs will populate with your data and add a trend line. An increasing trend line indicates that there is an increase in the percentage of patients who are receiving the recommended duration of prophylaxis or less. A decreasing trendline indicates that there is an increase in patients receiving longer than recommended durations of prophylaxis within this cohort.
Run Chart Showing % of Patients Where Antibiotics Were Used for the Recommended Duration or Less

% "Yes" to Audit Q7 (Were Antibiotics Given for Less Than or Equal to the Recommended Duration?)

Governance

- Agree local governance for a quality improvement (QI) working group
  - Surgical/theatre directorate governance group
  - Antimicrobial advisory committee or Pharmacy & therapeutics committee
  - Quality & safety committee
  - Audit committee

- Assemble QI group - suggested members
  - Lead Surgeon/Obstetrician/Cardiologist
  - Surgical/Obstetrics/Cardiology NCHD
  - Anaesthetist
  - Infection Specialist (Microbiologist or Infectious Diseases Physician)
  - Antimicrobial Pharmacist
  - Nurse Manager
  - Quality Manager
Issues & action

• Discuss audit findings with QI group

• Develop and implement a QI plan

• Re-audit post implementation of QI plan

• Use the run chart in the Excel audit tool to document progress and impact of individual interventions
Issues & action

- Other suggested local quality improvement actions:
  - Amendment of operative notes proforma to encourage documentation
  - Amendment of drug chart / electronic prescribing record
  - Amendment of sign out theatre documentation
  - Amendment of post-op surgical nursing care plan
Supporting resources

Education

- eLearning module on all aspects of surgical antibiotic prophylaxis including “the right duration” on HSeLanD (RCPI 2 CPD credits)
  - Audience: anyone who prescribes, dispenses or administers surgical antibiotic prophylaxis.

Case study: Meet Tom

Tom is a 45-year-old man undergoing a transurethral resection of the prostate (TURP). He has a history of multiple UTIs.

You've cared for previous patients who've developed a post-operative bloodstream infection after the TURP procedure and want to prevent that from occurring in Tom.

Select NEXT to continue.
Supporting resources

- A3 posters and pens with key messaging.
- Part of a multifaceted approach
Supporting resources
• A patient information leaflet entitled “Antibiotics before an operation to reduce risk of infection”.
• NALA approved for plain English language
• Will be automatically issued to any hospital that requested posters & pens in January
• Order from www.healthpromotion.ie in January
Supporting resources

- Communications e.g. RCSI communications in progress, RESIST newsletter, Health Matters, Hospital Professional News
How will we know if we are improving care for patients?

Supports

- Recording and copy of slides will be available on the resources page next week.
- Resources page on [www.antibioticprescribing.ie](http://www.antibioticprescribing.ie) on the hospital-related page.
  - Or via the short link [www.bit.ly/3eGoCKw](http://www.bit.ly/3eGoCKw)
- Include the video on how to use the audit tool.
- If interest we can plan a further webinar in February/March for sharing of ideas/progress.
Further work by AMRIC/NCPS

- Webinar for Surgeons @ the RCSI Wednesday evening slot
  - If any other group would like us to do a session we would be delighted

- Just initiated a link with the Private Hospital’s Executive to share the position paper and resources.
Thank you for your support in implementing this quality & patient safety initiative

We would be interested to hear of your local experiences of this quality improvement work or any feedback you have on any of the tools or resources, email marie.philbin1@hse.ie
