

## National Office for Suicide Prevention

### Briefing on CSO Suicide Figures

4<sup>th</sup> November 2020

#### Overview

In Ireland, the [Central Statistics Office](#) (CSO) provides mortality data including deaths by suicide. This data is provided in different stages;

1. Numbers of deaths are provided firstly based on year of registration – “provisional”
2. They are revised later, by year of occurrence – “official”
3. Finally they are revised later again, to include “late registrations”.

These numbers are not easily comparable across different years - at any given time, data for different years is at different stages. The following table gives the number of suicide deaths in Ireland since 2012, and highlights the stage of each dataset (as at November 2020);

Year	Number of suicide deaths	Male	Female	Type of data
2019	421	317	104	Provisional, year of registration data
2018	437	327	110	Official, year of occurrence data, excluding late registrations <i>Published by CSO on 30<sup>th</sup> October 2020</i>
2017	383	310	73	Official, year of occurrence data, excluding late registrations
2016	516	417	99	Official, year of occurrence data, including late registrations
2015	489	384	105	Official, year of occurrence data, including late registrations
2014	567	464	103	Official, year of occurrence data, including late registrations
2013	547	440	107	Official, year of occurrence data, including late registrations
2012	581	472	109	Official, year of occurrence data, including late registrations

The CSO also publishes data relating to undetermined deaths. It is currently not possible to estimate the proportion of undetermined deaths that are deaths by suicide.

### Year of occurrence suicide data (official)

The year of occurrence data is more comprehensive and allows for year-on-year comparison, however, this data can change due to delayed Coroner inquests resulting in late registered suicide deaths. In 2018 (most recent year available) there were **437** deaths by suicide in Ireland; rate of 9.0 per 100,000 of the population. Just over 76% of these deaths were male. This high male-to-female ratio is a constant feature of deaths by suicide over the years, as can be seen in the tables to follow.

Based on the most recent year of occurrence data (2018):

- Amongst males and females together, the suicide rate per 100,000 is highest amongst those aged 55-64 at 14.6 per 100,000.
  - Between 2000 and 2017, the rate was highest in those aged 45-54.
- Amongst males, the highest rate was in those aged 55-64, at 23.8 per 100,000.
  - In 2017, the rate was highest in those aged 25-34.
  - In 2016, the rate was highest in those aged 55-64.
  - Between 2010 and 2015, the rate was highest in those aged 45-54.
- Amongst females, the highest rate was in those aged 45-54, at 7.1 per 100,000.
  - In 2017, the rate was highest in those aged 45-54.
  - In 2016, the rate was highest in those aged 15-24.
  - In 2015, the rate was highest in those aged 55-64.
  - Between 2012 and 2014, the rate was highest in those aged 45-54.

### Year of registration suicide data (provisional)

Year of registration data for 2019 is available. This data shows that;

- There were **421** deaths by suicide (317 Male and 104 Female) registered in 2019.

This data will be subject to change.

## Numbers and rates of suicide and other causes of death, 2005-2019\*

This table includes 'year of occurrence' and 'year of registration' data as published by the CSO. It *excludes* late registered suicide deaths (i.e. deaths by suicide occurring in years for which the CSO have already published 'year of occurrence' data).

Year of occurrence data (2005-2016) updated to reflect late registered suicide deaths.

The table below includes revised year of occurrence data to reflect late registered suicide deaths (i.e. deaths by suicide occurring in years for which the CSO have already published year of occurrence data). Currently, 2016 is the most recent year for which the year of occurrence data has been updated to reflect late registered deaths.

\* Figures for 2019 are provisional and subject to change.

\*\*These are two-year (rather than three-year) moving averages. Following an amendment of the EU NUTS legislation, data is now (since 2018) provided for Tipperary, rather than for Tipperary NR and Tipperary SR.
