

HSE National Office for Suicide Prevention (NOSP)

Briefing on CSO Suicide Statistics

16th November 2021

In Ireland, the Central Statistics Office (CSO) provides mortality data including deaths by suicide. Death due to intentional self-harm is classified as an unnatural death and therefore, must be referred to the Coroner for investigation. This investigation can take a protracted length of time to complete for various reasons (such as getting medical reports, health and safety reports, engineer's report, the involvement of the Director of Public Prosecutions etc.) and this delays the registration of such deaths.

Data from the CSO is published in different stages:

1. Numbers of deaths are provided firstly based on year of registration – 'provisional'
2. They are revised later, by year of occurrence – 'official'
3. Finally they are revised later again, to include 'late registrations'.

These numbers are not easily comparable across different years - at any given time, data for different years is at different stages. The following table gives the number of suicide deaths in Ireland since 2012, with information on the type of data for each year, at November 2021.

Year	Total suicide deaths	Male suicide deaths	Female suicide deaths	More information
2020	340	259	81	'Provisional', year of registration data, excluding late registered deaths. Available in the CSO Vital Statistics Yearly Summaries
2019	390	300	90	'Final', year of occurrence data, excluding late registered deaths. Available in the CSO PxStat database (Table VSD30 Suicides)
2018	437	327	110	
2017	500	391	109	'Final', year of occurrence data, including late registered deaths. Available on the CSO PxStat database (Table VSD33 Published Suicide Deaths and Late Registered Deaths)
2016	524	424	100	
2015	495	389	106	
2014	569	465	104	
2013	547	440	107	
2012	580	471	109	

During 2020, the public health restrictions associated with the COVID-19 pandemic impacted on the ability of Coroner's Courts to hold public hearings. Consequently, this will have impacted on the number of deaths registered and subsequently assigned an Underlying Cause of Death of intentional self-harm.

Read the CSO Information Note on the Implications of COVID-19 on the processing of Death Certificates [here](#).

Number of suicide deaths and rates of suicide, 2005 to 2020, updated to reflect late registered suicide deaths

This table includes revised data from the CSO, to reflect late registered suicide deaths (i.e. historic suicides that have been registered in years after the occurrence year data has been finalised for publication). **Data used for 2020 is provisional** and late registered deaths for 2018, 2019 and 2020 have not yet been published. Rates are crude rates per 100,000 population.

Suicide rates by age group and sex, 2005 to 2020

This table summarises rates of suicide by age group and sex. They are calculated using finalised occurrence year data from the CSO, and population estimates from [PxStat](#) Table PEA04. Data used for 2020 is provisional. Rates are crude rates per 100,000 population and all rates in this table exclude late registered deaths.

Three-year moving average rate of suicide, by county of residence of deceased, 2004 to 2020

This table summarises three-year moving average rates of suicide by county of residence of the deceased. They are calculated using finalised year of occurrence data from the CSO, and population estimates for each county which have been extrapolated from the most recent Census (2016) data. **Data used for 2020 is provisional.**

Rates are crude rates per 100,000 population and all rates in this table **exclude late registered deaths.**
