<th>Reimbursement Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adjuvant chemotherapy for pancreatic adenocarcinoma</td>
<td>C25</td>
<td>00284a</td>
<td>Hospital</td>
</tr>
<tr>
<td>Treatment of elderly patients or patients with ECOG =2 with locally advanced or metastatic non small cell lung cancer (NSCLC)</td>
<td>C34</td>
<td>00284b</td>
<td>Hospital</td>
</tr>
</tbody>
</table>

TREATMENT:

The starting dose of the drugs detailed below may be adjusted downward by the prescribing clinician, using their independent medical judgement, to consider each patient's individual clinical circumstances.

Adjuvant treatment of pancreatic adenocarcinoma:
Gemcitabine is administered once weekly for 3 consecutive weeks followed by a 1 week pause for 6 cycles (1 cycle = 28 days) or until disease progression or unacceptable toxicity develops.

Treatment of NSCLC:
Gemcitabine is administered once weekly for 3 consecutive weeks followed by a 1 week pause (1 cycle = 28 days) or until disease progression or unacceptable toxicity develops.

Facilities to treat anaphylaxis MUST be present when the chemotherapy is administered.

</thead>
<tbody>
<tr>
<td>1, 8 and 15</td>
<td>Gemcitabine</td>
<td>1000mg/m²</td>
<td>IV infusion</td>
<td>250ml NaCl 0.9% over 30mins</td>
<td>Every 28 days</td>
</tr>
</tbody>
</table>

ELIGIBILTY:

- Indications as above
- ECOG 0-2
- Macroscopic complete resection of tumour
- Adequate marrow reserve (ANC >1.5 x10⁹/L, platelets >100x10⁹/L)
- Adequate renal (creatinine ≤ 1.5xULN) and liver function (bilirubin ≤ 26micromol; AST/ALK ≤5xULN)

EXCLUSIONS:

- Hypersensitivity to gemcitabine or any of the excipients
- Breast feeding

PRESCRIPTIVE AUTHORITY:

The treatment plan must be initiated by a Consultant Medical Oncologist
NCCP Chemotherapy Regimen

TESTS:

Baseline tests:
- FBC, renal and liver profile
- Audiometry and creatinine clearance as clinically indicated

Regular tests:
- FBC prior to each treatment
- Renal and liver profile prior to each cycle

Disease monitoring:
Disease monitoring should be in line with the patient’s treatment plan and any other test/s as directed by the supervising Consultant.

DOSE MODIFICATIONS:
- Any dose modification should be discussed with a Consultant.

Haematological:
Prior to commencing a new treatment cycle (i.e day 1), ANC must be >1x10^9/L and platelets >100x10^9/L.

Dose modifications for gemcitabine within a cycle (i.e day 8 and 15)

Table 1: Dose modifications for gemcitabine within a cycle (i.e day 8 and 15)

<table>
<thead>
<tr>
<th>Adverse reactions</th>
<th>Recommended dose modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grade &gt; 3 Non-haematological toxicity (except nausea/vomiting)</td>
<td>Therapy with gemcitabine should be withheld (until toxicity has resolved to grade ≤1) and may be resumed with 50% dose reduction or treatment discontinued at discretion of prescribing consultant.</td>
</tr>
<tr>
<td>Grade &gt; 4 Non-haematological toxicity</td>
<td>Discontinue treatment</td>
</tr>
</tbody>
</table>

SUPPORTIVE CARE:

EMETOGENIC POTENTIAL: Low (Refer to local policy).

PREMEDICATIONS: None usually required

OTHER SUPPORTIVE CARE: No specific recommendations

ADVERSE EFFECTS / REGIMEN SPECIFIC COMPLICATIONS:

The adverse effects listed are not exhaustive. Please refer to the relevant Summary of Product Characteristics for full details.

- **Neutropenia**: Fever or other evidence of infection must be assessed promptly and treated appropriately.
- **Pulmonary Toxicity**: Acute shortness of breath may occur. Discontinue treatment if drug-induced pneumonitis is suspected.
- **Cardiovascular**: Due to the risk of cardiac and/or vascular disorders with gemcitabine, particular caution must be exercised with patients presenting a history of cardiovascular events.
- **Irreversible renal failure**: Associated with haemolytic uraemic syndrome may occur rarely with gemcitabine. Use caution with pre-existing renal impairment.
- **Infusion time**: Infusion time prolonged beyond 60 minutes has been shown to increase volume of distribution and has been associated with an increase in toxicity. However, given in the context of a fixed dose rate (FDR) regimen, prolonged infusions have also been reported to produce a higher response rate than standard regimens in association with a higher intracellular accumulation of its active metabolite (dFdCTP) (7-10).

DRUG INTERACTIONS:

- Current drug interaction databases should be consulted for more information.

ATC CODE:

Gemcitabine L01BC05
NCCP Chemotherapy Regimen
