

## PEMEtrexed and CISplatin Therapy

### INDICATIONS FOR USE:

INDICATION	ICD10	Regimen Code	Reimbursement Status
Treatment of chemotherapy naïve patients with unresectable malignant pleural mesothelioma.	C45	00317a	Hospital
First line treatment of patients with locally advanced or metastatic non-small cell lung cancer (NSCLC).	C34	00317b	Hospital

### TREATMENT:

The starting dose of the drugs detailed below may be adjusted downward by the prescribing clinician, using their independent medical judgement, to consider each patient's individual clinical circumstances.

PEMEtrexed and CISplatin are administered once every 21 days until disease progression or unacceptable toxicity develops.

Admin. Order	Day	Drug	Dose	Route	Diluent & Rate	Cycle
1	1	PEMEtrexed	500mg/m <sup>2</sup>	IV infusion	100ml 0.9% NaCl over 10min	Every 21 days
2	1	<sup>a</sup> CISplatin	75mg/ m <sup>2</sup>	IV infusion	1000ml 0.9% NaCl over 2 hours to start 30 min after completion of PEMEtrexed	Every 21 days
		Folic Acid or multivitamin containing 350-1000 micrograms folic acid	350-1000 micrograms <sup>b</sup>	PO		
<p><sup>a</sup><b>Pre and post hydration therapy required for CISplatin</b>            See local hospital policy recommendations.            Suggested <u>prehydration</u> for CISplatin therapy:            1. Administer 10mmol magnesium sulphate (MgSO<sub>4</sub>) (+/-KCl 20mmol/L if indicated) in 1000mL sodium chloride 0.9% over 60 minutes.            Administer CISplatin as described above  <u>Post hydration</u>: Administer 1000 ml 0.9% NaCl over 60mins</p> <p>Mannitol 10% may be used to as per local policy to induce diuresis, although there is no conclusive evidence that this is required. The routine use of furosemide to increase urine flow is not recommended unless there is evidence of fluid overload (4, 5).</p> <p><sup>b</sup> At least five doses of folic acid must be taken during the seven days preceding the first dose of PEMEtrexed, and dosing must continue during the full course of therapy and for 21 days after the last dose of PEMEtrexed.            See Premedications for further treatment required.</p> <p>PEMEtrexed is physically incompatible with diluents containing calcium, including lactated Ringer's injection and Ringer's injection.</p>						

### ELIGIBILITY:

- Indications as above
- ECOG 0-2

## EXCLUSIONS:

- Hypersensitivity to PEMEtrexed, CISplatin or any of the excipients
- Pregnancy and Lactation
- Creatinine clearance < 45ml/min
- Pre existing neuropathies ≥ grade 2
- Significant hearing impairment/tinnitus

## PRESCRIPTIVE AUTHORITY:

The treatment plan must be initiated by a Consultant Medical Oncologist.

## TESTS:

### Baseline tests:

- FBC, renal and liver profile
- Audiology and creatinine clearance if clinically indicated

### Regular tests:

- FBC, renal and liver profile prior to each cycle

### Disease monitoring:

Disease monitoring should be in line with the patient's treatment plan and any other test/s as directed by the supervising Consultant.

## DOSE MODIFICATIONS:

- Any dose modification should be discussed with a Consultant.

### Haematological:

- Dose adjustments at the start of a cycle should be based on nadir haematologic counts or maximum non-haematologic toxicity from the preceding cycle of therapy.
- Treatment may be delayed to allow sufficient time for recovery.
- Upon recovery patient should be retreated using the guidelines below.

**Table 1: Dose modifications for haematological toxicity of PEMEtrexed and CISplatin**

Based on Day 1 counts			
ANC (x10 <sup>9</sup> /L)		Platelets (x 10 <sup>9</sup> /L)	Dose of PEMEtrexed and CISplatin
≥ 1.5	and	≥ 100	100%
< 1.5	or	<100	Delay
Based on nadir counts			
≥ 0.5	and	≥ 50	100%
<0.5	and	≥ 50	75% of previous dose
any	and	<50	75% of previous dose
any	and	<50 with bleeding <sup>a</sup>	50% of previous dose

<sup>a</sup> CTC v2.0; NCI 1998 definition of ≥CTC Grade 2 bleeding

## Renal and Hepatic Impairment:

**Table 2: Dose modification of CISplatin and PEMEtrexed in renal and hepatic impairment**

CISplatin	Renal Impairment		Hepatic Impairment			
	CrCl (ml/min)	Dose	No dose reduction necessary			
	≥60	100%				
	45-59	75%				
	<45	Consider CARBOplatin				
PEMEtrexed	CrCl(ml/min)	Dose	Bilirubin		Aminotransferases	
	≥45	100%	>1.5 x ULN	and/or or	> 3 x ULN (hepatic metastases absent) > 5 x ULN (presence of hepatic metastases)	Not recommended. <b>Clinical decision</b>
	<45	Not recommended				

## Management of adverse events:

**Table 3: Dose Modification of PEMEtrexed and CISplatin for Adverse Events**

Adverse reactions	Recommended dose modification
<b>Non-haematologic toxicities<sup>a,b</sup></b>	
Any grade ≥3 toxicity other than mucositis or Any diarrhoea requiring hospitalisation (irrespective of grade) or grade ≥3 diarrhoea	Withhold treatment until resolution to less than or equal to patient's pre-therapy value Resume at 75% of previous dose for both PEMEtrexed and CISplatin
Grade ≥3 mucositis	Withhold treatment until resolution to less than or equal to patient's pre-therapy value Resume at 50% of previous dose for PEMEtrexed and at 100% of previous dose for CISplatin
Grade ≥3 toxicity after 2 dose reductions	Discontinue
<b>Neurotoxicity</b>	
Grade 2	Reduce dose of CISplatin to 50% of previous dose
Grade 3-4	Discontinue CISplatin and PEMEtrexed
<b>Haematologic Toxicity</b>	
Grade ≥3 toxicity after 2 dose reductions	Discontinue

<sup>a</sup>CTC v2.0; NCI 1998; <sup>b</sup> Excluding neurotoxicity

## SUPPORTIVE CARE:

**EMETOGENIC POTENTIAL:** High (Refer to local policy).

## PREMEDICATIONS:

- A corticosteroid should be given the day prior to, on the day of, and the day after PEMEtrexed administration. The corticosteroid should be equivalent to 4 mg of dexamethasone administered orally twice a day.
- Intramuscular injection of vitamin B<sub>12</sub> (hydroxycobalamin) (1,000 micrograms) in the week preceding the first dose of PEMEtrexed and once every three cycles thereafter. Subsequent vitamin B<sub>12</sub> injections may be given on the same day as PEMEtrexed.

## OTHER SUPPORTIVE CARE:

None usually required.

## ADVERSE EFFECTS / REGIMEN SPECIFIC COMPLICATIONS

The adverse effects listed are not exhaustive. Please refer to the relevant Summary of Product Characteristics for full details.

- **Myelosuppression:** Usually the dose limiting toxicity with PEMEtrexed. PEMEtrexed should not be given to patients until absolute neutrophil count (ANC) returns to  $1.5 \times 10^9/L$  and platelet count returns to  $100 \times 10^9/L$ . Dose reductions for subsequent cycles are based on nadir ANC, platelet count and maximum non-haematologic toxicity seen from the previous cycle.
- **Skin reactions:** Pre-treatment with dexamethasone (or equivalent) can reduce the incidence and severity of skin reactions.
- **Cardiotoxicity:** Serious cardiovascular events including MI and cerebrovascular events have been uncommonly reported usually when PEMEtrexed is given in combination with another cytotoxic agent. Most of the patients in whom these events have been observed had pre-existing cardiovascular risk factors.
- **Renal Toxicity:** Nephrotoxicity is common with CISplatin. Encourage oral hydration. Avoid nephrotoxic drugs such as aminoglycoside antibiotics.
  - Serious renal events, including acute renal failure, have been reported with PEMEtrexed alone or in association with other chemotherapeutic agents.
  - Nephrogenic diabetes insipidus and renal tubular necrosis were also reported in post marketing setting with PEMEtrexed alone or with other chemotherapeutic agents. Most of these events resolved after PEMEtrexed withdrawal. Patients should be regularly monitored for acute tubular necrosis, decreased renal function and signs and symptoms of nephrogenic diabetes insipidus (e.g. hypernatraemia).
- Ototoxicity and sensory neural damage should be assessed by history prior to each cycle.

## DRUG INTERACTIONS:

- In patients with normal renal function ( $CrCl > 80$  ml/min), high doses of non-steroidal anti-inflammatory drugs (NSAIDs, such as ibuprofen  $> 1600$  mg/day) and aspirin at higher dose ( $> 1.3$  g daily) may decrease PEMEtrexed elimination and, consequently, increase the occurrence of PEMEtrexed adverse events.
- The concomitant administration of PEMEtrexed with NSAIDs or aspirin at higher dose should be avoided for 2 days before, on the day of, and 2 days following PEMEtrexed administration on patients with mild to moderate renal insufficiency ( $CrCl$  from 45 to 79 ml/min).
- In patients with mild to moderate renal insufficiency eligible for PEMEtrexed therapy, NSAIDs with long elimination half-lives should be interrupted for at least 5 days prior to, on the day of, and at least 2 days following PEMEtrexed administration.
- Nephrotoxic drugs (e.g. loop diuretics and aminoglycosides) may decrease the clearance of PEMEtrexed.
- Concomitant administration of substances that are also tubularly secreted (e.g. probenecid, penicillin) could potentially result in delayed clearance of PEMEtrexed.
- Avoid concurrent use of CISplatin with nephrotoxic drugs (e.g. aminoglycosides, furosemide, NSAIDs) due to additive nephrotoxicity. If necessary monitor renal function closely.
- Current drug interaction databases should be consulted for more information.

## ATC CODE:

PEMEtrexed - L01BA04  
 CISplatin - L01XA01
