NCIS — National Cancer Information System

NCIS.Chart 2025.07 Conference Patient List Sorting

NCIS Chart will be updated to version 2025-07 on October 16th, 2025. Patient List sorting changes in the conference module are highlighted below.

Create Conference - Patient List Sorting

In the new version, if the default blank option under the conference patient list sorting is selected, then the hospital headers will not appear, if patients in the conference are from more than one hospital. The following options can be used, for the hospital header names to be displayed:

Client-Patient's last Name- Orders alphabetically by patient last name and also contains hospital header if applicable.
Presented by- Orders by patients' presenter and also contains hospital header, if applicable.
Diagnosis- Orders by patient diagnosis if entered and also contains hospital header, if applicable.

MDM users can continue to manage the patient list by using the sort button to change the patient order, within any hospital on the list.
