| Acute Division - Emergency Care | | |
|-----------------------------------|--|---|
| 1 | KPI title | New ED Attendances |
| 2 | KPI Description A9 | Total number of new patients who present themselves to hospital Emergency Department (ED). An ED is a hospital facility that provides 24/7 access for undifferentiated emergency and urgent presentations across the entire spectrum of medical, surgical, trauma and behavioural conditions. An Emergency Department "New Attendance" is an individual unscheduled visit by one patient to receive treatment from the Emergency Medicine Service. |
| 3 | KPI Rationale | It is an important measure for clinical audit/governance and planning of services and to measure the unplanned attendances to each hospital to measure demand on the entire service. Due to the unplanned nature of patient attendance, the department must provide initial treatment for a broad spectrum of illnesses and injuries, some of which may be life-threatening and require immediate attention. |

| Acute Division - Emergency Care | | |
|-----------------------------------|--|--|
| 1 | KPI title | Return ED attendances |
| 2 | KPI Description A10 | Total number of scheduled and unscheduled return attendances at the Emergency Department. Return Attendances include: Scheduled Return: A planned follow-up attendance at the same department, and for the same incident as the first attendance. This includes patients attending EM review clinics. Unscheduled 24-hour Return: An unplanned attendance at the same department and for the same incident within 24 hours of the first attendance. Unscheduled Seven-day Return: An unplanned attendance at the same department and for the same incident within seven days of the first attendance. Unscheduled 28-day Return: An unplanned attendance at the same department and for the same incident within 28 days of the first attendance. |

| Acute Division - Outpatient attendances | | |
|--|---|---|
| 1 | KPI title | Outpatient Attendances - New : Return Ratio (excluding obstetrics and warfarin haematology clinics) |
| 2 | KPI Description A16 | The number of new patients that attend a service compared to the number of review patients that attend a service. Expressed by setting out for each new patient attendance, how many review patients attendances occur. Trimmed to exclude large volume specialties of obstetrics and warfarin haematology clinics with expected ratios in excess of 2:1 |
| 3 | KPI Rationale | This is an access indicator. Lower ratios of review patients will facilitate more new patients to be seen thus reducing waiting lists |
| | Indicator Classification | Please tick Indicator Classification this indicator applies to: |

| Acute Division | | |
|--|--|---|
| Emergency Care & Patient Experience Time | | |
| 1 | KPI title | % of all attendees at ED who are discharged or admitted within 6 hours of registration |
| 2 | KPI Description A26 | % of all ED patients who wait less than 6 hours. Total Emergency Department Time (TEDT) is measured from Arrival to ED Departure Time. |
| 3 | KPI Rationale | a. A 6 hour target for ED has been included in the HSE service plan for a number of years and Patient Experience Time, which is equivalent to TEDT, has been collected at a number of EDs since 2010. |
| | | b. TEDT includes both productive clinical time and delays. This indicator aims to reduce the delays without compromising on quality of care (1). |
| | | c. Prolonged durations of stay in EDs are associated with poorer patient outcomes (2,3). |
| | | d. Research in an Irish ED demonstrated that patient mortality increased exponentially after 6 hours total time spent in the ED(4). |
| | | e. Prolonged waiting times are associated with adverse outcomes for patients discharged from EDs.(5) |
| | | f. Patients waiting more than 6 hours should be cared for in a more appropriate care setting than an ED |
| | | g. Patients who have completed their period of EM care draw on nursing and other ED resources that would be more effectively directed at new patients who require timely initial clinical assessment and nursing care. |
| | | h. This indicator sets an upper limit on the duration of ED patient care. However, a small minority of patients may require longer than 6 hours care in an ED setting due to the complexity of their presenting problems. This is why a 95% compliance target has been set. |
| | | i. An upper absolute limit of 9 hours is set to ensure that the 5% of patients who may not comply with the 6 hour target do not go on to have protracted waiting times. |
| | | j. Monitoring the median, mean and centiles will allow EDs that do not achieve the target initially to monitor the timeliness of the care they provide, to better understand performance and demonstrate improvement towards achievement of the target. Secondary measures will also allow hospitals that meet the target to demonstrate exemplary performance in further reducing waiting times and will support benchmarking of hospital performance. |
| | | k. The centile measures will also demonstrate any potentially unfavourable distortions in practice such as a rush to discharge or admit a disproportionate number of patients close to the 6-hour target time. |
| | | l. Efficient care should not be rushed. Comparison of median and 75th centile data between similar EDs will indicate if a particular unit is managing patients at an unexpectedly quick rate This will flag the need to investigate whether this variance represents more efficient or unacceptably rushed care. |

|--|--|---|
| Emergency Care & Patient Experience Time | | |
| 1 | KPI title | % of all attendees at ED who are discharged or admitted within 9 hours of registration |
| 2 | KPI Description A27 | % of all ED patients who wait less than 9 hours. Total Emergency Department Time (TEDT) is measured from Arrival to ED Departure Time. |
| 3 | KPI Rationale | a. A 9 hour target for ED has been included in the HSE service plan for a number of years and Patient Experience Time, which is equivalent to TEDT, has been collected at a number of EDs since 2010. |
| | | b. TEDT includes both productive clinical time and delays. This indicator aims to reduce the delays without compromising on quality of care (1). |
| | | c. Prolonged durations of stay in EDs are associated with poorer patient outcomes (2,3). |
| | | d. Research in an Irish ED demonstrated that patient mortality increased exponentially after 9 hours total time spent in the ED(4). |
| | | e. Prolonged waiting times are associated with adverse outcomes for patients discharged from EDs.(5) |
| | | f. Patients waiting more than 9 hours should be cared for in a more appropriate care setting than an ED |
| | | g. Patients who have completed their period of EM care draw on nursing and other ED resources that would be more effectively directed at new patients who require timely initial clinical assessment and nursing care. |
| | | h. Monitoring the median, mean and centiles will allow EDs that do not achieve the target initially to monitor the timeliness of the care they provide, to better understand performance and demonstrate improvement towards achievement of the target. Secondary measures will also allow hospitals that meet the target to demonstrate exemplary performance in further reducing waiting times and will support benchmarking of hospital performance. |
| | | i. The centile measures will also demonstrate any potentially unfavourable distortions in practice such as a rush to discharge or admit a disproportionate number of patients close to the 9-hour target time. |
| | | j. Efficient care should not be rushed. Comparison of median and 75th centile data between similar EDs will indicate if a particular unit is managing patients at an unexpectedly quick rate This will flag the need to investigate whether this variance represents more efficient or unacceptably rushed care. |

Monitoring the median, mean and centiles will allow EDs that do not achieve the target initially to monitor the timeliness of the care they provide, to better understand performance and demonstrate improvement towards achievement of the target. Secondary measures will also allow hospitals that meet the target to demonstrate exemplary performance in further reducing waiting times and will support benchmarking of hospital performance.</p> <p>k. The centile measures will also demonstrate any potentially unfavourable distortions in practice such as a rush to discharge or admit a disproportionate number of patients close to the 6-hour target time.</p> <p>l. Efficient care should not be rushed. Comparison of median and 75th centile data between similar EDs will indicate if a particular unit is managing patients at an unexpectedly quick rate This will flag the need to investigate whether this variance represents more efficient or unacceptably rushed care.</p> |

| Acute Division - Acute Medical Patient Processing | | |
|---|--|--|
| 1 | KPI title | % of medical patients who are discharged or admitted from AMAU within 6 hours AMAU registration |
| 2 | KPI Description CPA1 | Total medical assessment time (TMAT) is measured from the time of arrival of a medical patient in the ED to the time of medical assessment unit departure time. The measures are the percentage of all new medical patients attending the AMAU/MAU * who are admitted or discharged within 6 hours. |
| 3 | KPI Rationale | a) A 6 hour target for patients to be assessed in AMAU/AMU* is a performance indicator for the Acute Medicine Programme. b) TMAT includes both productive clinical times and delays. This indicator aims to reduce the delays without compromising quality of care. c) Long durations of stay in all types of Assessment Units are associated with poorer patient outcomes. d) A major objective of the Acute Medicine Programme is to increase the efficiency of patient assessment and to stream patients to the most appropriate destination for further care which is either admission to a short stay unit, specialist ward or discharged home with or without out patient review. e) This indicator sets an upper limit for the duration of Assessment Unit care. However a small minority of patients may require more than 6 hours due to the complexity of their presenting problems, this is why a 75% compliance target has been set. |

| 1 | KPI title | % of routine patients on Inpatient and Day Case Waiting List that are chronologically scheduled |
| 2 | KPI Description A33 | % of routine patients chronologically scheduled |
| 3 | KPI Rationale Indicator Classification (National Standards for Safer Better HealthCare) | Longer waiting routine patients should be scheduled for treatment before routine patients with shorter wait times. Please tick Indicator Classification this indicator applies to: <input checked="" type="checkbox"/> Person Centred Care <input checked="" type="checkbox"/> Effective Care <input checked="" type="checkbox"/> Safe Care <input type="checkbox"/> Better Health and Wellbeing <input type="checkbox"/> Use of Information <input type="checkbox"/> Workforce <input type="checkbox"/> Use of Resources <input type="checkbox"/> Governance, Leadership and Management |
| 4 | KPI Target | the national target is to have 90% of routine patients chronologically scheduled |
| 5 | KPI Calculation | The chronological scheduling rate is measured at procedure/consultant level (Routines only). It takes the number of patients with appointments (TCI) and compares them with those patients who have yet to receive an appointment date (Active) to see if the latter are waiting longer. A Chronological Scheduling compliance rate can thereby be derived (see further details in the explanatory notes provided in the report) |
| 6 | Data Source Data Completeness Data Quality Issues | Data is provided by each hospital and data analytics are carried out by NTPF. Each hospital is responsible for the accuracy of data provided, assessed via ongoing NTPF data quality project and hospital audits. Analysis based on latest appointment assignment rate (TCI rate) by consultant rather than actual hospital capacity. This TCI rate is provided in the report for context. |

| 4 | KPI Target | 25 litres per 1000 bed days used |
| 5 | KPI Calculation | The rate of usage per hospital is calculated as per the total volume of hand rub consumed in litres per 1000 bed days used. This is measured quarterly and annually. Hospital activity data, bed days used are obtained from the Performance Management Unit |
| 6 | Data Source | Hospital pharmacies and supplies departments (reporting to HPSC) |
| | Data Completeness | Reported by all acute hospitals |
| | Data Quality Issues | Does not distinguish between staff, patient and visitor use of alcohol hand gel. Hospitals reporting via supplies departments may have artificially high rates of use, due to batch delivery of supplies. |

| Acute Division - ALOS | | |
|---|--|--|
| 1 | KPI title | Medical patient average length of stay |
| 2 | KPI Description CPA11 | The mean length of stay for patients admitted to the medical specialties as outlined in tracer conditions (contingent on <500 delayed discharges) |
| 3 | KPI Rationale | Overall length of stay is a useful indicator for the efficiency of hospital performance, and the improvements in efficiencies which will be delivered by the implementation of the Acute Medicine Programme. Length of stays for patients of medical specialties tend to be longer than other specialties and subsequent bed day usage of hospital bed stock tends to be greater. Therefore the monitoring of AvLOS in medical patients is important and the overall figure is useful as a summary measure at national level. More detailed monitoring of sub groups of AvLOS will be done through the Acute Medicine Programme. |

| 1 | KPI title | Surgical patient average length of stay |
| 2 | KPI Description CPA12 | A specified individual hospital target for average length of hospital stay for surgical inpatients (reference baseline adjusted to 2010 equivalent volumes which includes a factor for day case conversion). A surgical inpatient is a patient who has a principal procedure as listed in the surgery programme procedure list (Appendix I) or is admitted to a specialty as listed in the surgery programme specialty list (Appendix II). Patients admitted to a surgical specialty may or may not have had a procedure carried out. |
| 3 | KPI Rationale A44 | There is significant potential for improvement i.e. reduction in length of stay for surgical patients in Ireland. There is variation across hospitals and across case mix groupings which is demonstrated in 2011 HIPE analysis by Surgery Programme which allows individual hospitals to compare their performance against other anonymised hospitals and plan improvements. The NQAIS system allows users to compare their performance against optimum AvLoS for a selection of elective procedures. Reducing length of stay to optimum levels improves the patient pathway and experience, by reducing pre-operative and discharge delays. It also |

| 4 | KPI Target | NSP 2016 Target: for Jan'16 to Dec'16 will be set based on a reduction of 4.5% on 2014 baseline for hospitals deducted from 1.) their end of year annual average for 2015 where those hospitals have achieved or exceeded their 2015 target or 2.) deducted from the 2015 end of year target for hospitals that did not achieve the 2015 AvLoS target set by the National Clinical Programme in surgery for that hospital. Hospital groups will be assessed based on an appropriate volume weighted target derived from the targets for the hospitals in that group. Where target are set prior to year end, up to date 12 month rolling average figures will be used instead of 2015 year end figures. |

| 17 | Additional Information | 2010 was taken as the base line year from which target reductions in average length of stay (AvLoS) / average bed day usage for treating inpatients were taken. Implied in the calculations was an assumption that over all volumes of surgical patients treated and the ratio split of day cases to inpatient for surgical patients would stay constant or equivalent to 2010 figures. In reality this assumption is not true, so to factor in actual figure for 2011, 2012 and so on, adjustments must be made before the target year figure can be compared with 2010 the base line figure. To compare a year to be measured with the base line year (2010), an adjustment for the overall volume change must be made. This can be expressed as the overall surgical patient volume for 2010 divided by the overall surgical patient volume for the year being measured. With this adjustment ratio it can be said that total bed usage in 2010 is equivalent to the total bed day usage in the target year multiplied by the adjustment for overall volume. To look at the equivalent inpatient bed day usage in the target year subtract the 2010 day case bed day usage from the total for that year (assume two day cases get done per day bed each day). This gives us a formula for actual bed day usage in the target year normalised for 2010 volumes and ratio of day case to inpatient in 2010: Target year day bed usage of bed days adjusted for 2010 volumes -2010 day case bed usage + Target year inpatient bed usage of bed days adjusted for 2010 volumes OR 2010 tot volume/target year tot volume * Num day cases in target year *0.5 - Num day cases in 2010 year *0.5 +2010 tot volume/target year tot volume *Num inpatient cases in target year * Ave length of stay for inpatient in target year |

| 1 | KPI title | ALOS for all inpatient discharges excluding LOS over 30 days |
| 2 | KPI Description A39 | The average length of stay in days for all inpatient discharges and deaths excluding Length of Stay over 30 days. Length of stay is counted from the date of admission of the patient to an inpatient hospital bed until their date of discharge. For the purposes of this metric, ALOS values greater than 30 days are set to 30 days. |
| 3 | KPI Rationale | Average length of stay (ALOS) is used in assessment of quality of care, costs and efficiency and is used for health planning purposes. |
| | Indicator Classification | Please tick Indicator Classification this indicator applies to: |

| 4 | KPI Target | Target 2016: 4.3 |
| 5 | KPI Calculation | Trimmed length of stay (days) is calculated as the maximum of (discharge date – admission date and 30 days.) Where a case has been admitted and discharged on the same date, the length of stay is set to 0.5 days. The overall average length of stay is then calculated as the total number of beddays, trimmed as above, across inpatient discharges/deaths in the reporting period divided by the total number of inpatient discharges/deaths in the reporting period. Reporting of this metric is based on a rolling 12 month period 3 months in arrears. |

Acute Division - Rheumatology OPD

| | | |
|--|---|---|
| 1 | KPI title | New:Return attendance ratio |
| 2 | KPI Description CPA16 | This refers to the ratio of the number of return patients seen in a Rheumatology outpatient clinic over a certain time period to the number of new outpatients seen in that clinic over the same time period. |
| 3 | KPI Rationale | This indicator is a key access and performance indicator. To address demand and patients on long waiting lists consultants need to ensure minimum number of new patients are seen relative to return patients and that return patients are discharged as appropriate and as soon as possible to primary care. |

| 1 | KPI title | Percentage of hospital stay for acute stroke patients in stroke unit who are admitted to an acute or combined stroke unit. |
| 2 | KPI Description CPA21 | Care of patients with acute stroke in an acute, combined (acute and rehabilitation) or rehabilitation stroke unit. Acute Stroke Patient: patients with principal diagnosis of Intracerebral Haemorrhage (ICD I61); Cerebral Infarction (Ischaemic Stroke) (ICD I63); Stroke, not spec as haemorrhage or infarction (ICD I64) for whom a YES response was made to Admitted to Stroke Unit on HIPE Portal Dataset. Acute or Combined Stroke Unit: An identified area within a hospital used exclusively or predominantly for the care of stroke patients, supported by a trained specialist multidisciplinary team, with regular multidisciplinary team meetings, availability of equipment and skills for physiological monitoring (blood pressure, blood oxygen, blood glucose and heart rhythm), and defined structures for audit, governance, and education/training. |
| 3 | KPI Rationale | To monitor development of acute and rehabilitation stroke services in accordance with the national stroke programme (national policy and national guidelines), to assess patient access to acute stroke unit care. Patients with a principal diagnosis of Intracerebral Haemorrhage (ICD I61); Cerebral Infarction (Ischaemic Stroke) (ICD I63); Stroke, not spec as haemorrhage or infarction (ICD I64) should spend at least 50% of their hospital stay in the stroke unit. |

| Acute Hospitals including Clinical Programmes: Acute Coronary Syndrome | | |
| 1 | KPI Title | Percentage of STEMI patients (without contraindication to Reperfusion therapy) who get PPCI |
| 2 | KPI Description | STEMI patients: STEMI is an acronym meaning "ST segment elevation myocardial infarction," which is a type of heart attack. This is determined by an electrocardiogram (ECG) test. Myocardial infarctions (heart attacks) occur when a coronary artery suddenly becomes at least partially blocked by a blood clot, causing at least some of the heart muscle being supplied by that artery to become infarcted (that is, to die). Heart attacks are divided into two types, according to their severity - STEMI and Non STEMI. A STEMI is the more severe type of heart attack LBBB: Left bundle branch block (LBBB) is a cardiac conduction abnormality seen on the electrocardiogram (ECG). In this condition, activation of the left ventricle is delayed, which causes the left ventricle to contract later than the right ventricle. PPCI: Primary percutaneous coronary intervention is an interventional procedure to open the coronary artery to unblock it and allow flow of blood to the heart muscle. Information is reported on for patients who present both Out of Hours and In hours (9-5 Mon to Fri). |
| | CPA25 | |
| 3 | KPI Rationale | International evidence supports the treatment of primary percutaneous coronary intervention (PPCI) undertaken at a Cath lab centre with sufficient throughput where this treatment can be initiated within the time of 120 mins from first medical contact. A small % of patients will be unable to get to a PPCI centre and so will receive the treatment of thrombolysis (TL). |

| 1 | KPI Title Percentage of reperfused STEMI patients (or LBBB) who get timely PPCI |
| 2 | KPI Description STEMI (heart attack) patients who get timely reperfusion therapy are those that receive either PPCI or Thrombolysis within targeted times. LBBB: Left bundle branch block (LBBB) is a cardiac conduction abnormality seen on the electrocardiogram (ECG). In this condition, activation of the left ventricle is delayed, which causes the left ventricle to contract later than the right ventricle. PPCI: Primary percutaneous coronary intervention is an interventional procedure to open the coronary artery to unblock it and allow flow of blood to the heart muscle. Timely PPCI reperfusion is defined as first medical contact (FMC) to balloon <= 120 mins or First door to balloon <= 120 mins. First Medical Contact (FMC) is defined as the date/time of the first 12 lead ECG that is positive to a STEMI.(or LBBB) CPA26 |
| | STEMI, LBBB, PPCI and Thrombolysis are further defined in the European Society of Cardiology guideline 'Acute Myocardial Infarction in patients presenting with ST-segment elevation (management of)' www.escardio.org/guidelines-surveys/esc-guidelines/ Information is reported on for patients who present both Out of Hours and In hours (9-5 Mon to Fri). |
| 3 | KPI Rationale International evidence supports swift restoration of blood flow to blocked coronary artery as a medical emergency. Past treatment has mainly been rapid thrombolysis at local hospital (TL) but newest form of treatment is emergency primary angioplasty (PPCI) at a PPCI Centre. |

|---|---|---|
| 1 | KPI Title | Percentage of elective surgical inpatients who had principal procedure conducted on day of admission |
| 2 | KPI Description CPA27 | The percentage of inpatients having elective surgical procedures on the day of admission over the total number of all elective surgical inpatients who have surgery, will increase by a target of PLUS 5% to 10% within hospitals from end 2014 baseline (towards a maximum of 85%). Hospitals with a baseline above 70% will have a plus 5% increase, hospitals with a baseline below 60% will have a 10% increase and hospitals will have an increase of between 10% and 5% linearly adjusted for the baselines position in the range 60 to 70%, e.g. if baseline 40% target would be 50%, baseline 64% target 72%, baseline 82% target 85%, baseline 87% target 87%. See attached for further definitions. The baseline will be the higher of the hospitals 2014 target DoSA or the hospitals actual annual DoSA for 2014. |
| 3 | KPI Rationale | This indicator allows for measurement of the effect of improved pre-admission assessment services which facilitate day of surgery admission. The enhancement of pre-admission assessment is a key theme of the Surgery and Anaesthesia programmes' models of care as this service allows for the reduction in pre-operative bed usage, allows for optimising patients' conditions before admission and helps to avoid cancellation of operations. |
| | Indicator Classification | Please tick which Indicator Classification this indicator applies to, ideally choose one classification (in some cases you may need to choose two). <input checked="" type="checkbox"/> Person Centred Care <input checked="" type="checkbox"/> Effective Care <input type="checkbox"/> Safe Care <input type="checkbox"/> Better Health and Wellbeing <input type="checkbox"/> Use of Information <input type="checkbox"/> Workforce <input checked="" type="checkbox"/> Use of Resources <input type="checkbox"/> Governance, Leadership and Management |
| 4 | KPI Target | NSP 2016 Target will be set for each hospital and the target for hospital groups will be a volume weighted target based on the targets for the individual hospitals in that group. The individual hospital targets will be the higher of an increase of between PLUS 5% to 10% be set based on the 12 month rolling average at Sept 2015 annualised DOSA rate for hospital or the 2015 target for hospitals that are to far from their 2015 target to make a further improvement (towards a maximum of 85%). The increase for each will be determined by their 12 month rolling average at Sept 2015 annualised DOSA rate where Hospitals with a baseline above 70% will have a plus 5% increase, hospitals with a baseline below 60% will have a 10% increase and the remaining hospitals will have an increase of between 10% and 5% linearly adjusted for the baselines position in the range 60 to 70% (formula would be 10% minus half the percentage over 60% in the hospitals metric e.g. a hospital with a 12 month rolling average at Sept 2015 annualised DOSA rate of 64.6% would get a target of $10 - 4.6/2 = 7.7$ so the new target would be 72.3% for 2016 DOSA) |

| 1 | KPI title | Percentage day case rate for Elective Laparoscopic Cholecystectomy |
| 2 | KPI Description CPA28 | The percentage day case rate of Elective Laparoscopic Cholecystectomy should be at least 60% |
| 3 | KPI Rationale | It is better for the patient and a more efficient use of limited hospital resources to perform appropriate procedures as day cases on suitable patients, instead of keeping the patient unnecessarily in hospital for one or more nights. Elective Laparoscopic Cholecystectomy is a good example of surgical procedures which can be performed safely and effectively as a day case. |

| 17 | Additional Information | Note: Day case rates should be assessed at individual hospital and hospital group level. Some hospital groups choose to conduct elective day case surgical activity at a specialist model 2 hospital for lower risk patients (eg. ASA of 1 or 2) and send higher risk patients to a larger model 3 or 4 hospital to mitigate risk of complications during day case surgery posed by patients with higher risk (eg. ASA 3 or higher). Appropriately qualified Surgical and Anaesthetic personnel will select patients for model 2 day case activity and model 3 / 4 day case activity in a pre-admission assessment process.KPI noted in National Service Plan 2016 |

| Acute Services - Surgery | | |
|---|---|---|
| 1 | KPI Title | Reduction in bed day utilisation by acute surgical admissions who do not have an operation |
| 2 | KPI Description | Achieve a 5% reduction in the relative bed days used (BDU) for acute surgical discharges from hospital that do not have a surgical primary procedure from the 2014 actual results as a baseline and individualised for each hospital. Note: Will exclude hospitals that do not admit acute surgical inpatients. Note Percentage is of the total BDU by acute inpatients for all surgery discharges in the period being reports. |
| | CPA29 | |
| 3 | KPI Rationale | There is significant potential for improvement in bed day utilisation by inpatients admitted by surgical consultants who subsequently do not have a surgical primary procedure. There is a patient care requirement and clinical need to admit patients, perform observations and test which subsequently result in a decision not to perform a surgical primary procedure. However an analysis of the data from 2010 to 2013 shows a significant variation across hospitals and across case mix groupings and indicates there is room for improvement in BDU's by this cohort of patients. An improvement in the number of bed days used by acute surgical discharges who did not have surgery during their stay in hospital allows for better use of bed day resources and improved access for patients awaiting surgical care. |

| 4 | KPI Target | NSP 2016 Target: Achieve a 5% reduction in the relative BDU by Acute surgical discharges who did not have a surgical primary procedure as a percentage of all BDU for acute surgical discharges. The 2016 Target will be set based on 2014 annual figure. Note: In future years the target will be reset to support further improvement. For example: In hospital X, 45.0% of Acute inpatient surgical bed days used were for patients who did not have a surgical primary procedure in 2014 so the 2016 target will be 42.75%. |

| | Baseline Year 2010 | Current Values | Adjusted Current Values |
|-----------------------|-----------------------|-------------------|-------------------------------|
| Total number of Cases | 400,625 | 420,606 | 400,625 |
| Number of Daycases | 240,336 | 263,223 | 250,719 |
| Number of Inpatients | 160,289 | 157,383 | 149,906 |
| Inpatient ALOS | 6.628 | 6.461 | 6.075 |
| Inpatient Beddays | 1,062,395 | 1,016,911 | 973,794 |

Baseline values for 2010 have been provided by the Surgery and Anaesthesia Programme and should not be changed.
Baseline values are hospital specific. This file cannot be used to determine the current adjusted ALOS for another hospital.
Current values should be taken from the HIPE Portal and entered directly into this sheet.
Sameday cases are assigned a length of stay 0.5 days. The HIPE Portal assigns 1 day as default therefore this needs to be adjusted prior to entering the values into this file.
Current ALOS values are adjusted for total number of cases and inpatient/daycase conversions.

| Scheduled Waiting List | | |
|--|---|--|
| 1 | KPI title | Scheduled waiting list cancellation rate |
| 2 | KPI Description A43 | The percentage of the scheduled inpatient / day case waiting list that has been cancelled in the current month (ie month being reported). |
| 3 | KPI Rationale | It is better for the patient and a more efficient use of limited hospital resources to perform surgery on scheduled patients on the first scheduled date for their procedure then to have there procedure deferred or cancelled and scheduled for a later date. While some patients have to be cancelled because of medical reasons, many cancellations occur because of bed availability and scheduling administrative reasons which should be minimised. |

Acute Division - Hospital Mortality

| | | |
|---|--|---|
| 1 | KPI title | Standardised Mortality Rate (SMR) for inpatients deaths by hospital and clinical Condition |
| 2 | KPI Description A44 | The SMR is the ratio of the actual versus expected number of in-hospital deaths by diagnosis, with adjustment for potential confounding factors. |
| 3 | KPI Rationale | Differences in SMRs can signal statistically unusual mortality patterns which can arise for a number of reasons including random variation, differences in patient characteristics, and variation in the quality of data. Quality of care is a potential explanation for differences when the other factors have already been taken into consideration. SMRs are a "screening test", and should be interpreted in light of the above factors and always be used in conjunction with other indicators of the quality of care. |
| | Indicator Classification | Please tick Indicator Classification this indicator applies to: <input type="checkbox"/> Person Centred Care <input checked="" type="checkbox"/> Effective Care <input checked="" type="checkbox"/> Safe Care <input type="checkbox"/> Better Health and Wellbeing Use of Information <input type="checkbox"/> Workforce Use of Resources <input type="checkbox"/> Governance, Leadership and Management |
| 4 | KPI Target | TBC |
| 5 | KPI Calculation | The SMR is the ratio of observed deaths to expected deaths multiplied by 100. The SMR logistic regression (risk) computation uses currently available hospital data to identify statistically usual and unusual patterns of mortality in the national context. The model adjusts for potential confounders including: age; gender; admission type (elective or emergency); admission source (home, hospital transfer, nursing home, other); previous emergency admissions (last 12 months); deprivation indicator (medical card yes/no); palliative care; and the Charlson Index (key medical co-morbidity conditions with attached weights that predict the risk of death within one year). Confidence intervals (95.0%, 99.8%) are computed around each SMR value. Where the confidence interval overlaps 100, it suggests that there is no significant difference between the hospital's mortality rate and the national average; where the lower confidence interval does not reach 100, the hospital mortality rate is considered higher than national average; and where the upper confidence interval does not reach 100 the hospital mortality rate is considered lower than the national average |

Acute Division - National Early Warning Score (NEWS)

| | | |
|--|--|---|
| 1 | KPI title | % of Hospitals with full implementation of NEWS in all clinical areas of acute Hospitals and single speciality hospitals |
| 2 | KPI Description A52 | This indicator describes the total number of hospitals dealing with adult non-pregnant patients where the NEWS is operational on a defined group of patients (predominately in-patients). There is a standardised definition of implementation used across all hospitals |
| 3 | KPI Rationale | The National Early Warning Score (NEWS) education programme for non-pregnant adult patients is an interdisciplinary education programme designed to enhance healthcare professionals' understanding of patients who are clinically deteriorating, and the significance of altered clinical observations. It also seeks to improve communication between health care professionals and adopt a patient centred, quality driven approach, enhancing the timely management of patients. The National Early Warning Score (NEWS) for non-pregnant adult patients is based on patients vital signs for the early detection and management of deterioration in a patient's condition. |

Paediatric Early Warning System (PEWS)

| | | |
|--|---|---|
| 1 | KPI title | % of hospitals with implementation of PEWS (paediatric early warning score) |
| 2 | KPI Description A56 | The Irish Paediatric Early Warning System (PEWS) should be used in any inpatient setting where children are admitted and observations are routinely required. This indicator describes the total number of hospitals dealing with paediatric inpatients where the Irish PEWS is operational. There is a standardised definition of implementation used across all hospitals, defined by the NCG No.12 PEWS comprising 18 recommendations, attached to this document. |
| 3 | KPI Rationale Indicator Classification (National Standards for Safer Better HealthCare) | To monitor the implementation of PEWS according to the recommendations laid out in the NCG No.12 PEWS. | 5 | KPI Calculation | Denominator : the number of paediatric inpatient units in Ireland that have implemented the Irish PEWS by meeting the 18 recommendations of the NCG No.12 PEWS Numerator: the total number of paediatric inpatient units in Ireland requiring PEWS implementation to meet the standards of the NCG no.12 PEWS (n=19) Aim: 100% compliance |
| 6 | Data Source Data Completeness Data Quality Issues | Data to be collected manually in hospitals and BIU Acute to collect and report this data. There are 19 hospitals with paediatric inpatient services however the PEWS is currently being offered to 31 hospitals who admit children. In 2016 the data available from each of hospital will depend on the stage each hospital group has reached in the centrally facilitated national roll out plan. |

| Section | Recommendations |
|--|--|
| <p>Measurement and documentation of observations</p> <p>01-May</p> | <ul style="list-style-type: none"> • The Paediatric Early Warning System (PEWS) should be used in any inpatient setting where children are admitted and observations are routinely required. • PEWS should complement care, not replace clinical judgement. • The core physiological PEWS parameters must be completed and recorded for every set of observations. • Observations and monitoring of vital signs should be undertaken in line with recognised, evidence-based standards. • Nurse or family concern is a core parameter and an important indicator of the level of illness of a child, which may prompt a greater level of escalation and response than that indicated by the PEWS score alone. |
| <p>Escalation of care and clinical communication</p> <p>06-Oct</p> | <ul style="list-style-type: none"> • The PEWS escalation guide should be followed in the event of any PEWS trigger. • The ISBAR communication tool should be used when communicating clinical information. Where a situation is deemed to be critical, this must be clearly stated at the outset of the conversation. • Management plans following clinical review must be in place and clearly documented as part of the PEWS response. • A parameter amendment should only be decided by a doctor of registrar grade or above, for a child with a pre-existing condition that affects their baseline physiological status. • If an unwell but stable child has an elevated PEWS score, a decision to <u>conditionally</u> suspend escalation may be made by a doctor of registrar grade or above. |
| <p>Paediatric sepsis</p> <p>11</p> | <ul style="list-style-type: none"> • Once a diagnosis of sepsis has been made, it is recommended that the Paediatric Sepsis 6 is undertaken within one hour. |
| <p>Governance</p> <p>Dec-13</p> | <ul style="list-style-type: none"> • The Chief Executive Officer / General Manager, Clinical Director and Director of Nursing of each hospital or hospital group are accountable for the operation of the Paediatric Early Warning System (PEWS). A formal governance structure, such as a PEWS group or committee, should oversee and support the local resourcing, implementation, operation, monitoring and assurance of the Paediatric Early Warning System. • The PEWS governance committee should identify a named individual(s) to coordinate local PEWS implementation. |
| <p>Supporting practices</p> | <ul style="list-style-type: none"> • Hospitals should support additional safety practices that enhance the Paediatric Early Warning System and lead to greater situation awareness among clinicians and multidisciplinary teams. |

| | |
|--------------------|---|
| 14-15 | <ul style="list-style-type: none"> The Paediatric Early Warning System should be supported through the application of quality improvement methods, such as engagement strategies, testing, and measurement to ensure successful implementation, sustainability and future progress. |
| Education 16-17 | <ul style="list-style-type: none"> The PEWS governance committee in each hospital must ensure that PEWS education is provided to all clinicians. Clinicians working with paediatric patients should maintain knowledge and skills in paediatric life support in line with mandatory or certification standards. |
| Audit 18 | <ul style="list-style-type: none"> Audit should be used to aid implementation and to regularly quality assure the Paediatric Early Warning System. |

PEWS KPI Data Collection 2016

Please answer the following questions in relation to your hospital:

Q 1. Is there a named PEWS Governance Group?

Q 2. Is there a named medical consultant lead?

Q 3. Is there a named nurse lead for PEWS?

Q 4. Is there a named, resourced coordinator for PEWS implementation?

Q 5. Please indicate the stage you consider your hospital to be at:

Pre-implementation *go to Q6*

Implementation <3 months *go to Q7*

Implementation >3 months *go to Q8*

Q 6a. Has PEWS education commenced for nurses?

Q 6b. Has PEWS education commenced for doctors?

Q 7. Has audit to support implementation been completed using the national tools at weeks:

-2

-6

- 12?

Q 8. Is the national tool for QI audit to monitor PEWS being utilised at least monthly?

The objective in publishing the Statement each month is to provide public assurance that maternity services are delivered in an environment that promotes open disclosure.</p> <p>It is not intended that the monthly Statement be used as a comparator with other units or that statements would be aggregated at hospital Group or national level. It assists in an early warning mechanism for issues that require local action and/ or escalation. It forms part of the recommendations in the following reports:</p> <ul style="list-style-type: none"> • HSE Midland Regional Hospital, Portlaoise Perinatal Deaths, Report to the Minister for Health from Dr. Tony Holohan, Chief Medical Officer, 24 February 2014; and • HIQA Report of the Investigation into the Safety, Quality and Standards of Services Provided by the HSE to patients in the Midland Regional Hospital, Portlaoise, 8 May 2015. <p>It is important to note tertiary and referral maternity centres will care for a higher complexity of patients (mothers and babies), therefore clinical activity in these centres will be higher and therefore no comparisons should be drawn with units that do not look after complex cases.</p> |
| 4 | KPI Target | NSP 2016: 100% all units |
| 5 | KPI Calculation | No of hospitals which have completed (as above)X 100, divided by No. of maternity Units (19 see list attached) |

| 1 | KPI title | Number of nurses prescribing medication |
| 2 | KPI Description A63 | The number of nurses and midwives who are currently in practice in the voluntary and statutory services of HSE as registered nurse prescribers (RNP) with the Nursing and midwifery Board of Ireland. (NMBI) |
| 3 | KPI Rationale | One of the ONMSD priorities is to support increasing the number of nurses and midwives to become Registered Nurse Prescribers across the HSE. This is supported by a number of trends both in Ireland and internationally supports the continued advancement of nurse midwife prescribing within the Irish healthcare system. These trends encompass the following: social and demographic change, for example, the aging population in Ireland changing health service provision and reconfiguration, for example the development of group hospitals and community healthcare organisations. increased specialisation of services, such as chronic disease management, nurse and midwifery led services, integrated nursing and midwifery roles etc. value for money including a return on investment in the education of health care professionals Implementation of the European working time directive. greater focus on community based services |

Nursing Prescribing Ionising Radiation (X-Ray)

| | | |
|--|---|--|
| 1 | KPI title | Number of Nurses Prescribing Ionising Radiation (X-Ray) |
| 2 | KPI Description HWB1 | The number of nurses registered on "The National Nurse Prescribing Ionising Radiation Data Collection System" authorised to prescribe ionising radiation in the voluntary and statutory services of the HSE. |
| 3 | KPI Rationale A64 Indicator Classification (National Standards for Safer Better HealthCare) | HSE and Government priority. The ONMSD are supporting the education programmes to increase the number of nurses who may prescribe Ionising Radiation. Maximising the number of Nurse Prescribers of ionising radiation (X-Ray) within the health care service will lead to increased levels of patient/service user satisfaction by providing the a more responsive, accessible, effective, timely and efficient service that improves and expedites the patient/service user journey. Please tick Indicator Classification this indicator applies to: x Person Centred Care x Effective Care x Safe Care <input type="checkbox"/> Better Health and Wellbeing <input type="checkbox"/> Use of Information x Workforce <input type="checkbox"/> Use of Resources <input type="checkbox"/> Governance, Leadership and Management |
| 4 | KPI Target | 2016: 55 (To increase number of nurses registered on to prescribe ionising radiation by 55 at end of 2016 from a baseline of 203 at 31 Dec 2015) |
| 5 | KPI Calculation | KPI is calculated on a count of the number of nurses registered on "The National Nurse Prescribing Ionising Radiation Data Collection System" at end of Dec 2016 compared with 2015 baseline. |
| 6 | Data Source Data Completeness Data Quality Issues | The HSE Database "The National Nurse Prescribing Ionising Radiation Data Collection System", the Programme Providers and the Prescribing Site CoOrdinators for Ionising Radiation. Ongoing validation process being carried out by ONSMD to ensure all those completing the programme are registered on HSE database. Dependant on information provided by third parties. |

| 10 | International Comparison | is there any comparisons that you could benchmark KPI with? Nurse Prescribing of Ionising Radiation is practiced in a number of countries including the United Kingdom, Canada USA and Australia. I am not aware of any international KPIs that are similar to this one: whether any of them maintain a database of the number of nurses prescribing Ionising Radiation, though it would be difficult to compare like with like. |

| 1 | KPI title | Mean and Median LOS (and bed days) for patients admitted with COPD |
| 2 | KPI Description CPA34 | Mean and Median Acute hospital stay – excluding day cases – as recorded on HIPE of COPD inpatients which are aged 15yrs or older with a principal diagnosis of COPD. Bed Days Used (BDU): number of days used for patients with principal diagnosis of COPD COPD: Chronic obstructive pulmonary disease (COPD) is chronic progressive irreversible airway obstruction which limits airflow to and from the lungs, causing shortness of breath (dyspnea). |
| 3 | KPI Rationale | COPD is a chronic disease which can largely be dealt with in Primary Care. Ireland has the 2nd highest hospitalisation rate for "avoidable" COPD admissions. COPD in the OECD. COPD is the commonest disease cause of emergency admission of adults in Ireland. |

| 1 | KPI Title | Access to structured Pulmonary Rehabilitation Programme in Acute Hospital Services |
| 2 | KPI Description | Pulmonary Rehabilitation is defined "as evidence based multidisciplinary and comprehensive intervention for patients with chronic respiratory diseases. Integrated into the individualised treatment of the patient, pulmonary rehabilitation is designed to reduce symptoms, optimize functional status, increase participation and reduce health care costs through stabilizing or reversing systemic manifestations of the disease. It includes strategies for life-long management. |
| | CPA37 | |
| 3 | KPI Rationale | Evidence of improved quality of life for patients. High levels of scientific evidence have demonstrated improved exercise capacity and health related quality of life and decreased breathlessness, fatigue and health care utilization following pulmonary rehabilitation. It is also recognised as one of the most cost effective interventions for people with COPD. |

Acute Division including Clinical Programmes - Asthma

| | | |
|----|---|---|
| 1 | KPI Title | Percentage of nurses in secondary care who are trained by national asthma programme |
| 2 | KPI Description | % of nurses in secondary care who are trained by the National Clinical Programme for Asthma The first phase of National Asthma Training Programme is targeting: • secondary care nurses in ED departments and AMAUs. • Training is as defined by the asthma programme |
| | CPA38 | |
| 3 | KPI Rationale | Completion of the Asthma Education programme is required in order to implement National Clinical Programme for Asthma guideline concordant care. Competence in managing asthma is a necessary competence for all health care providers. There is agreement at National and Hospital level to implement the National Asthma Programme, therefore the National Clinical Programme for Asthma is making the reasonable assumption that when nurses are trained they will provide guideline concordant asthma management. The National Asthma Programme in Finland, which achieved significant improvements in asthma care and outcomes, trained the staff that were at the forefront of delivering the programme*. * T Haahtela, L E Tuomisto, A Pietinalho, T Klaukka, M Erhola, M Kaila, M M Nieminen, E Kontula, L A Laitinen. | 1 | KPI Title | Number of lower limb amputations performed on Diabetic patients |
| 2 | KPI Description | Number of Diabetes discharges with a lower limb amputation |
| 3 | KPI Rationale CPA41 | Diabetes is one of the leading causes of lower limb amputations. The Diabetes Programme aims to provide improved diabetic control through integrated care and improved recognition and management of diabetic foot complications which may lead to amputation. A reduction in lower limb amputations in patients with diabetes is expected on a population basis following the introduction of comprehensive integrated care and foot care for the population. On a backdrop of rising prevalence of DM, numbers of amputations should not rise more than 10% on 2014 (444 cases) as prevention and care is improving. |

| 1 | KPI title | Percentage increase in hospital discharges following emergency admission for uncontrolled diabetes. |
| 2 | KPI Description CPA43 | Percentage increase in number of hospital discharges following admission with uncontrolled diabetes resulting in hyper or hypoglycaemia +/- other manifestations of poor control compared to 2014. |
| 3 | KPI Rationale | Uncontrolled diabetes may result in hyper or hypoglycaemia with various resultant clinical manifestations necessitating hospital admission. In 2014 there were 2723 hospital discharges following admission for uncontrolled diabetes. The corresponding figure in 2013 was 2818 and in 2012 was 2687. The Diabetes Programme aims to provide improved diabetic control through integrated care which should result in reduced hospital admissions with uncontrolled diabetes. |
