Acute Hospitals	A158	% of patients arriving by ambulance at ED to physical and clinical handover within 20 minutes of arrival	KPI Data under review
Acute Hospitals	A4 & A6	Inpatient Weighted Units and Day case Weighted Units (includes dialysis)	There has been a major change to the way in which weighted units have been calculated and reported for 2024. This change is due to the introduction of a common weighted unit for both inpatients and day cases. In prior years, the weighted units for inpatients and day cases, indicated the relative complexity of cases to the average complexity of cases within each of those settings separately. Those weighted units could not be combined to get a weighted measure activity for all admitted patients. For 2024, the weighted units in both inpatient and day case settings indicate the relative complexity of cases to the average complexity across all admitted patients. These admitted patient weighted units can be combined to get a weighted measure of activity for all admitted patients. This change does not affect the price being paid for a DRG but it means that, for the first time, inpatient and day case weighted units can be summed together. There is also a common admitted patient base price which replaces the previously separate inpatient and day case base prices.  Due to this change, weighted units reported for 2024 cannot be compared to weighted units in previous years. For this reason the columns relating to weighted units in the prior period have been left blank.
